SENS VR CONTROLLERS

VR IS GREAT
CONTROLLERS AREN'T

Virtual reality is cutting edge with an estimated market worth of 30 billion by the year 2020. Despite its success, the controllers don't let you interact with the virtual world intuitively. They don't let you open your hands, forcing you to pull a trigger or press a button instead. I set out to design a controller that makes interacting with VR more intuitive. When you open your hand, so does your character.

REACH OUT AND GRAB
VIRTUAL REALITY

SENS utilizes an elastic strap on the back of the controller to keep it attached to your hand while capacitive zones track your fingers. With SENS, you can reach out and grab objects in the virtual world.

OPEN YOUR
HAND

CAPACITIVE ZONES

TRIGGERS

SIDE BUTTON

Three capacitive zones track each of your fingers, translating their positions to your character in game. Capacitive sensors transform the joystick, side button, and triggers into zones.

THUMBSTICK

FUTURE-PROOF **TRACKING**

While SENS utilizes the capacitive sensors for much of the finger tracking, the leap motion sensor acts as a secondary input which helps assure accurate positioning. Meanwhile, the Oculus camera tracks the controllers.

INTUITIVE **CONTROL**

I designed SENS to be comfortable and intuitive. The grip is meant to mimic a wide range of objects while feeling as if its not even there when your hand is open. Combining intelligent design and creative applications of existing technology makes SENS perfectly suited for the current state of VR.

SENS

HAPTIC VEST

FEEL VR

The second half of the SENS system, a haptic vest meant to make the user 'feel' virtual reality. Current products rely solely on vibrations. With SENS, I set out to deliver a more complete experience in a refined package.

The vest was developed along with the controllers, meant to work together to deliver a more immersive experience. As a system, they share similar form language, colors, and technology.

GAMEPLAY

Before I could start designing, or even brainstorming, I had to begin cataloging the experiences characters felt in game. This list would help me decide what the vest had to make the user feel and where they should feel it.

TESTING

I needed an understanding of the appropriate technology before I could design the vest. That meant testing various components at different positions. I sewed a vest with velcro strips so that I could easily test each component.

MODELS + ITERATION

A corkboard is covered with numerous hand-drawn sketches of vests and their individual components, such as straps and buckles. The sketches are arranged in a somewhat organized manner, with some showing full vests and others focusing on specific details. The background of the corkboard is a light brown color, and the sketches are on white paper. The overall scene suggests a design process for a vest.

MODELS

I needed to 'get real' as fast as possible. I had to make sure the the vest was comfortable and adjustable. I could only get so much information from sketching and paper models so I began heat bending acrylic and sewing straps.

PRODUCT
SPECIFICATIONS

MANUFACTURING **DETAILS**

14 Individual pieces

Injection Molded

Minimal Cams and Undercuts

ABS and Aluminium

4 Thermoelectric Coolers

4 Heatsinks

4 40mm Fans

4 Vibration Motors

20 Coin Vibrators

1 LED Backlight Panel

DEC CAPSTONE OUTCOMES

Integration & Skills (Section 2, Research)

Integrate the skills and knowledge acquired through the DEC Core curriculum to propose solutions to real-world problems, through:

Strategy Identification

Formulation of value propositions

Identification and explanation of systems

Formulation of research questions

Synthesize Interdisciplinary Work (Section 3, Prototyping)

Synthesize interdisciplinary work (both collaboratively and independently) through:

Proposal of solutions/hypotheses

Interdisciplinary collaboration

Communicate Findings (Section 1, Project Overview)

Communicate capstone experience findings effectively using multiple modes

Professional Relevance (Section 1, Project Overview)

Evaluate the relevant professional, ethical and social responsibilities associated with the capstone experience

Global Context (Section 1, Project Overview)

Explain the global context of the capstone experience

Applications | Trends | Technologies (Section 3, Prototyping)

Interpret emerging applications/practices/trends/technologies as they apply to the capstone experience

Capstone Experience (Section 2, Research)

Relate the capstone experience to relevant contemporary issues
