Delay-Dependent Robust H/sub ∞/ Filtering for Time-Delay Systems with Markov Jumps

Lu, Chien-Yu; Tsai, Jason S. H. ; Su, T. J.

Abstract

This paper deals with the problem of robust H/sub ∞/ filtering for a class of jump linear continuous-time systems with delay dependence. The problem aims at designing a stable linear filtering assuring asymptotic stability and a prescribed H/sub ∞/ performance level for the filtering error system, respective of the time delays. A sufficient condition for the existence of such a filter is developed in terms of linear matrix inequalities. A numerical example demonstrates the validity of the theoretical results.
