Kan vi få et bedre miljø med smartere kloakker?

Lektor Luca Vezzaro

Forskning Døgn

Slagelse, d. 26. april 2018

Lidt om mig

- Født i Padova, tæt på Venedig
- Uddannet som miljøingeniør
- Kom til Danmark som udvekslingsstudent i 2005
- PhD om modellering af miljøfremmede stoffer i regnvand (2011)
- Jeg arbejder på DTU Miljø, hvor jeg forsker i styring og modellering af afløbssystemer
- Deltid ansat hos Krüger Veolia A/S (jeg tager forskning ud i "den virkelige verden")

Why do we have sewers?

Why do we have sewers?

Before 1800
(Western Cities)

BMJ readers choose sanitation as greatest medical advance since 1840

Annabel Ferriman *BMJ*

More than 11 300 readers of the *BMJ* chose the introduction of clean water and sewage disposal—"the sanitary revolution"—as the most important medical milestone since 1840, when the *BMJ* was first published. Readers were given 10 days to vote on a shortlist of 15 milestones, and sanitation topped the poll, followed closely by the discovery of antibiotics and the development of anaesthesia. The work of the 19th century lawyer Edwin Chadwick, who pioneered the introduction of piped water to people's homes and sewers rinsed by water, attracted 15.8% of the votes, while antibiotics took 15%, and anaesthesia took 14%. The next two most popular were the introduction of vaccines, with 12%, and the discovery of the structure of DNA (9%).

A total of 11 341 people voted on the shortlist, which was chosen by a panel of experts from a list nominated by readers. Almost a third of the voters were doctors, while a fifth were members of the general public, and one in seven were students. Another tenth were academic researchers. Almost two fifths of the voters were from the United Kingdom, and a fifth were from the United States.

Johan Mackenbach, professor of public health at Erasmus MC Medical Center, Rotterdam, who championed the cause of sanitation, said, "I'm delighted by so many people as such an important milestone. The general lesson which still holds is that passive protection against health hazards is often the best way to improve population health.

"The original champions of the sanitary revolution were John Snow, who showed that cholera was spread by water, and Edwin Chadwick, who came up with the idea of sewage disposal and piping water into homes.

"Inadequate sanitation is still a major problem in the developing world."

The *Medical Milestones* supplement is distributed with this week's *BMJ*.

Pollutant contribution from point discharges in DK

Once upon a time in Denmark

The good old operator

Once upon a time in Denmark

The good old operator

I need to optimize the performance of my system
(without building a lot of new expensive things)

Smart people from university, please help me!

2007-now ... a range of activities

Universities + research institutions + water utilities + consultants

- Many projects

- Storm- and Wastewater Informatics (SWI)
- Klimaspring
- Prepared
- AMOK
- Water Smart Cities

- Industrial PhDs
- Industrial postdocs
- Many MSc theses

One option to avoid overflow...

DTU

Real Time Control of drainage network

- Rain is not uniform \longrightarrow we can optimize the storage across the system \longrightarrow less overflow
- WWTP doesn't like high flows \longrightarrow we can regulate the inlet flow to the WWTP \longrightarrow less bypass

Real Time Control of drainage network

- Rain is not uniform \longrightarrow we can optimize the storage across the system \longrightarrow less overflow
- WWTP doesn't like high flows \longrightarrow we can regulate the inlet flow to the WWTP \longrightarrow less bypass

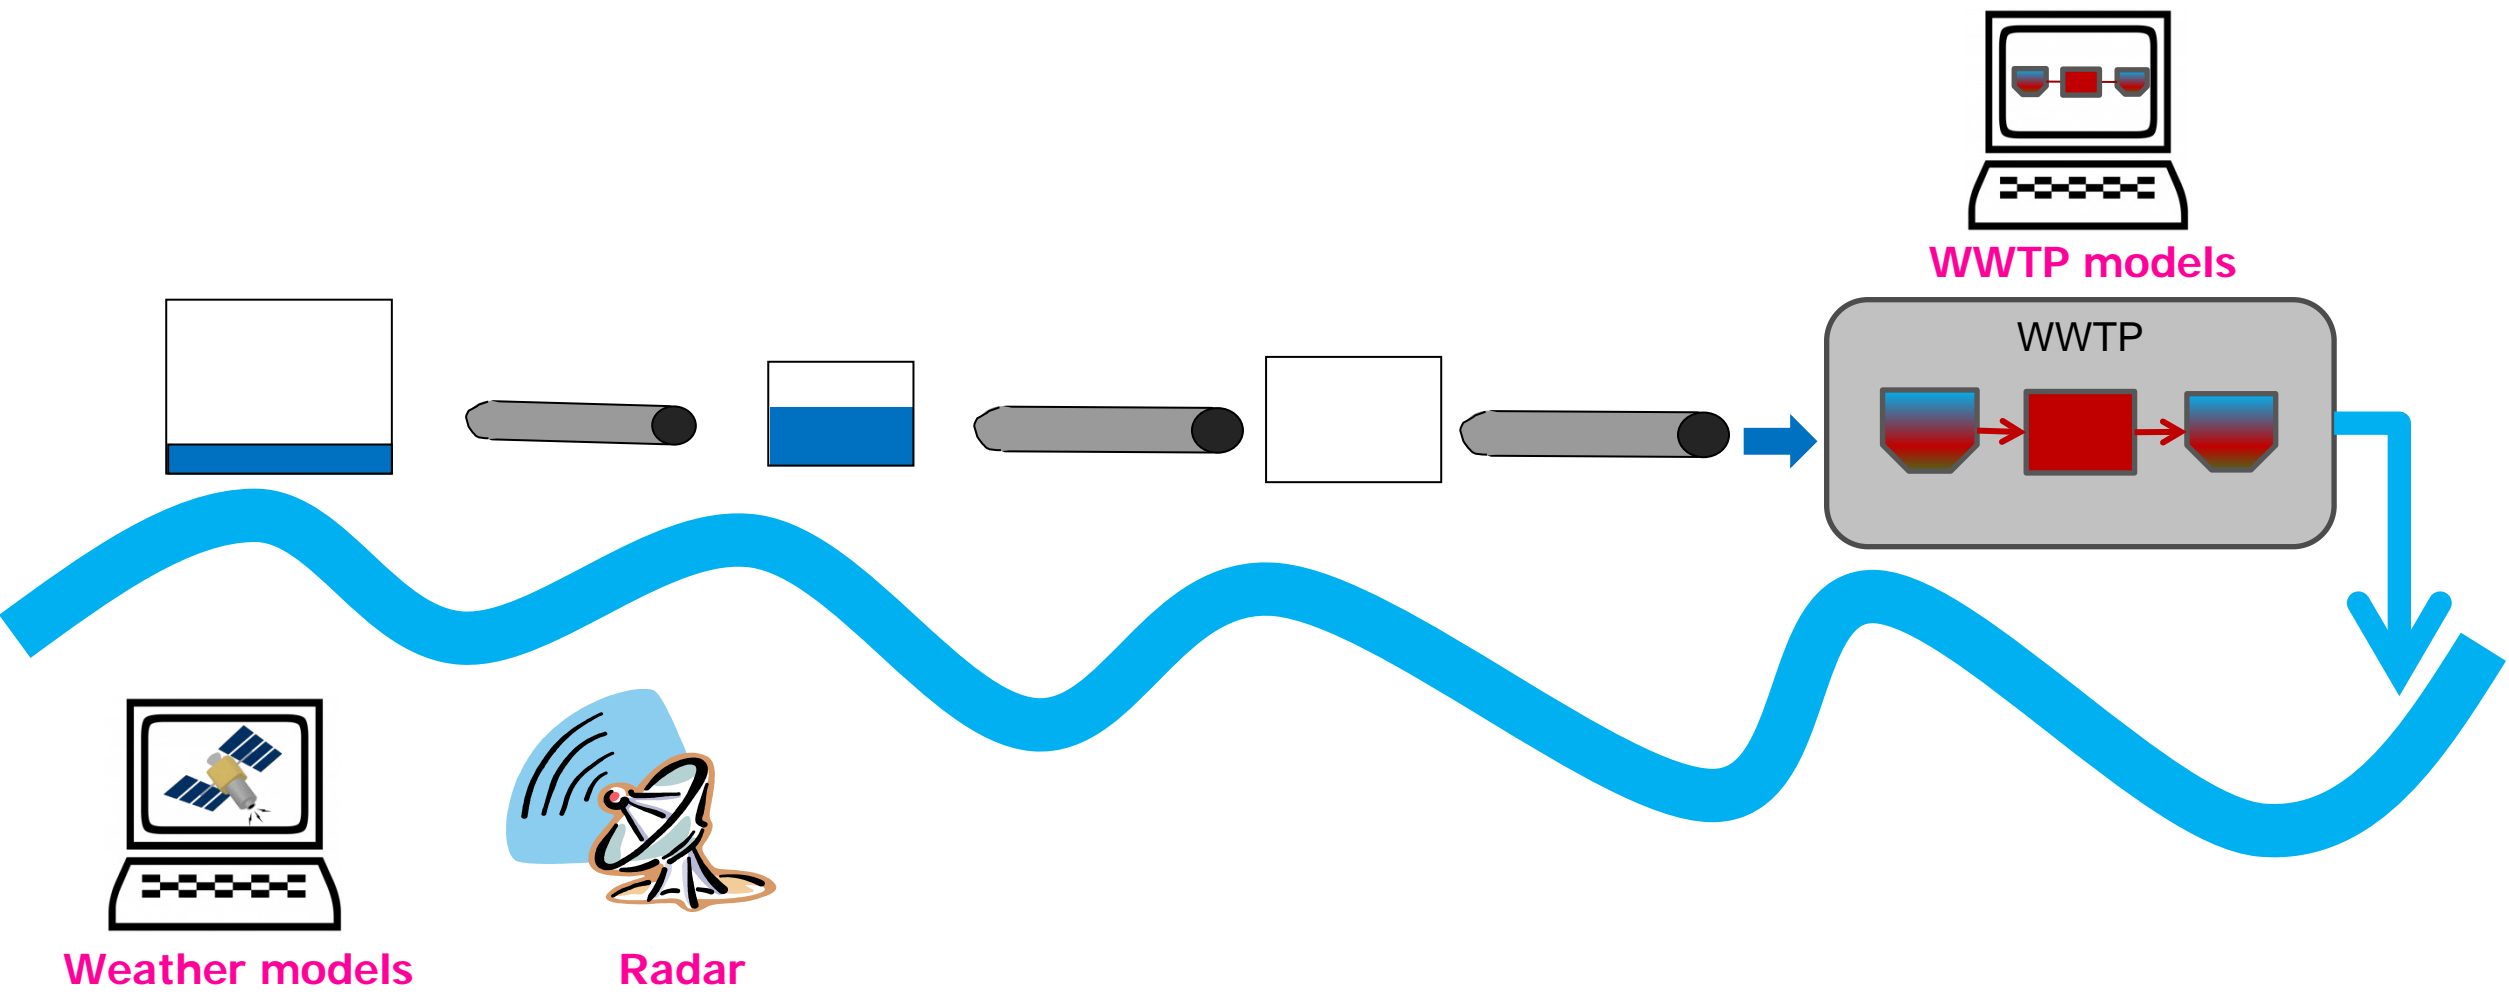

DTU

Model Predictive Control

- We can forecast rainfall → where and how much is going to rain → even less CSO
- We can forecast WWTP status → how much water the WWTP can treat → even less bypass

Model Predictive Control

- We can forecast rainfall → where and how much is going to rain → even less CSO
- We can forecast WWTP status → how much water the WWTP can treat → even less bypass

The SWI concept

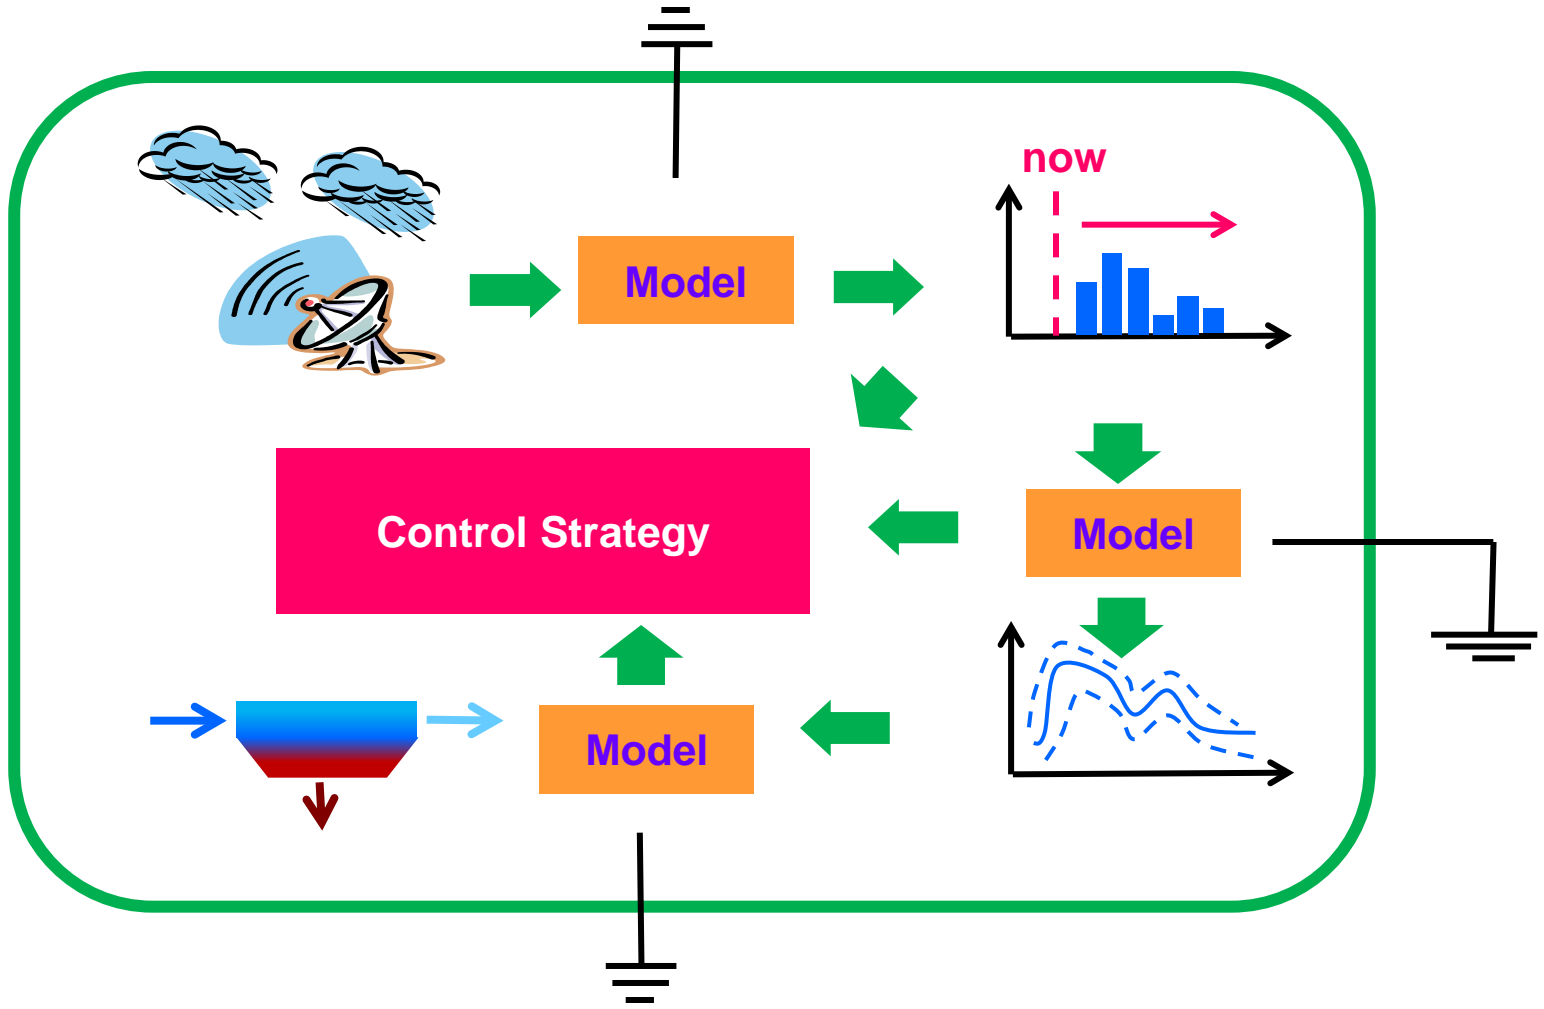

The happy operator

The fellowship of SWI – the long journey

The happy operator

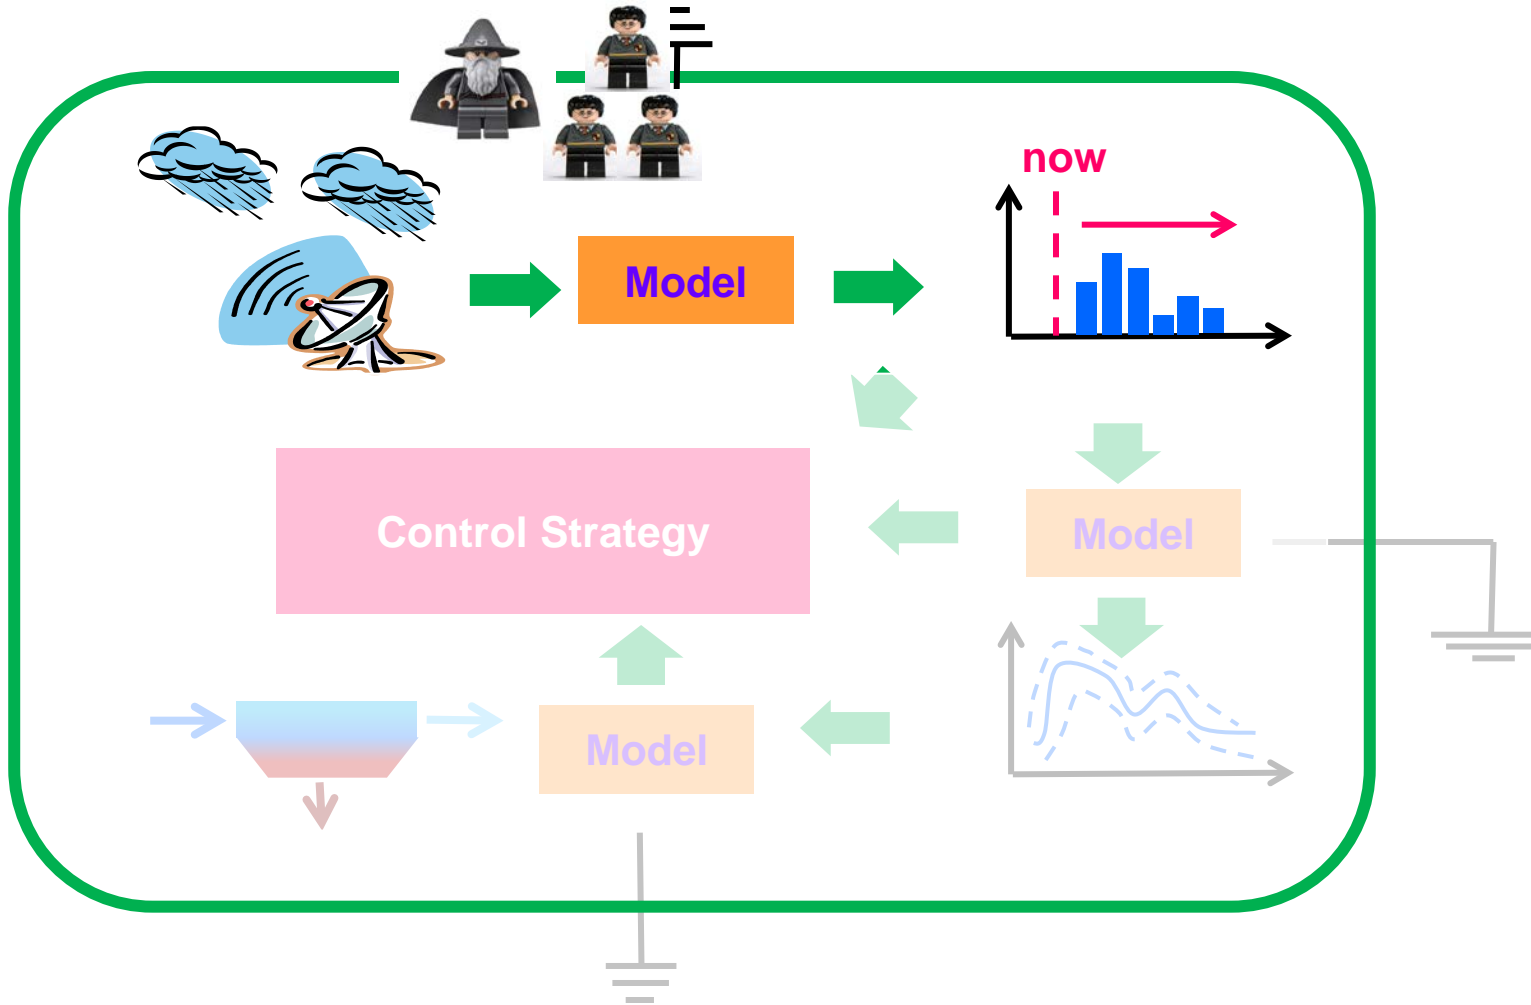

- Rainfall measurements
- Short-term rainfall forecasts
- Continuously updated hydrodynamic models
- Stochastic rainfall-runoff forecast
- WWTP forecast models
- MPC strategy addressing uncertainty

The fellowship of SWI – the long journey

Context vs. Model Uncertainty

what do we ask to the model?

Meteorological perspective

Weather behavior, pattern, feature

The big picture

Urban hydrology perspective

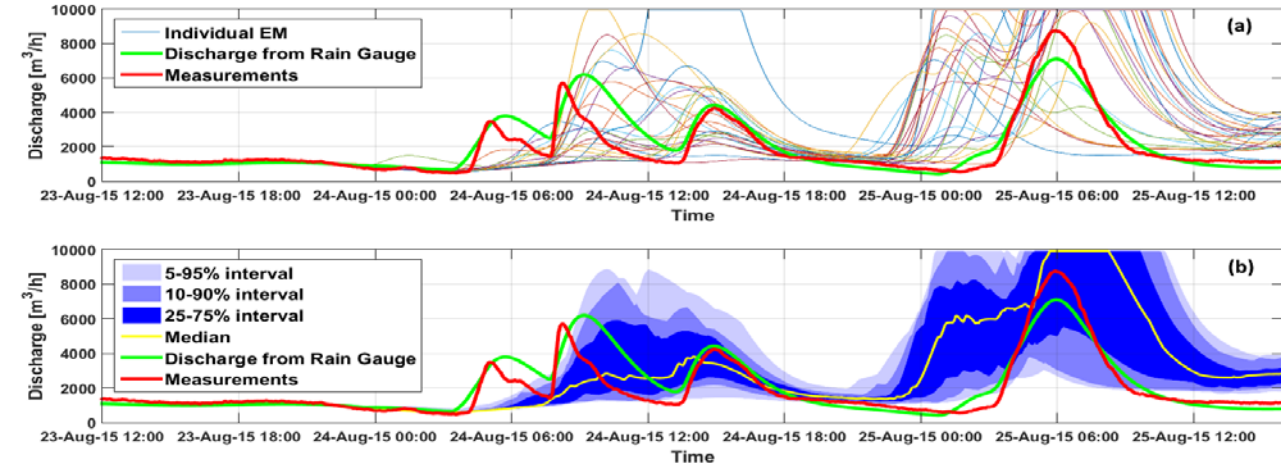

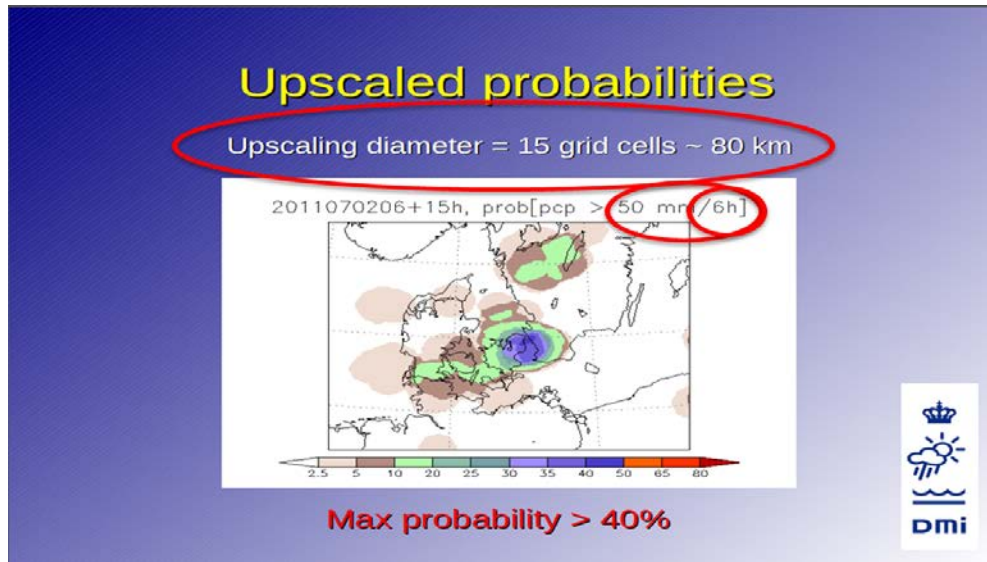

Local value with high resolution

The pixel

Context vs. Model Uncertainty

what do we ask to the model?

Meteorological perspective

These weather forecast are great!

Urban hydrology perspective

These weather forecast are crap

DMI model prediction (winter)

15-Jan-2015 - lead time 0 hours (in [mm/h])

DMI model prediction (summer)

31-Aug-2015 06:00:00 - lead time 0 hours (in [mm/h])

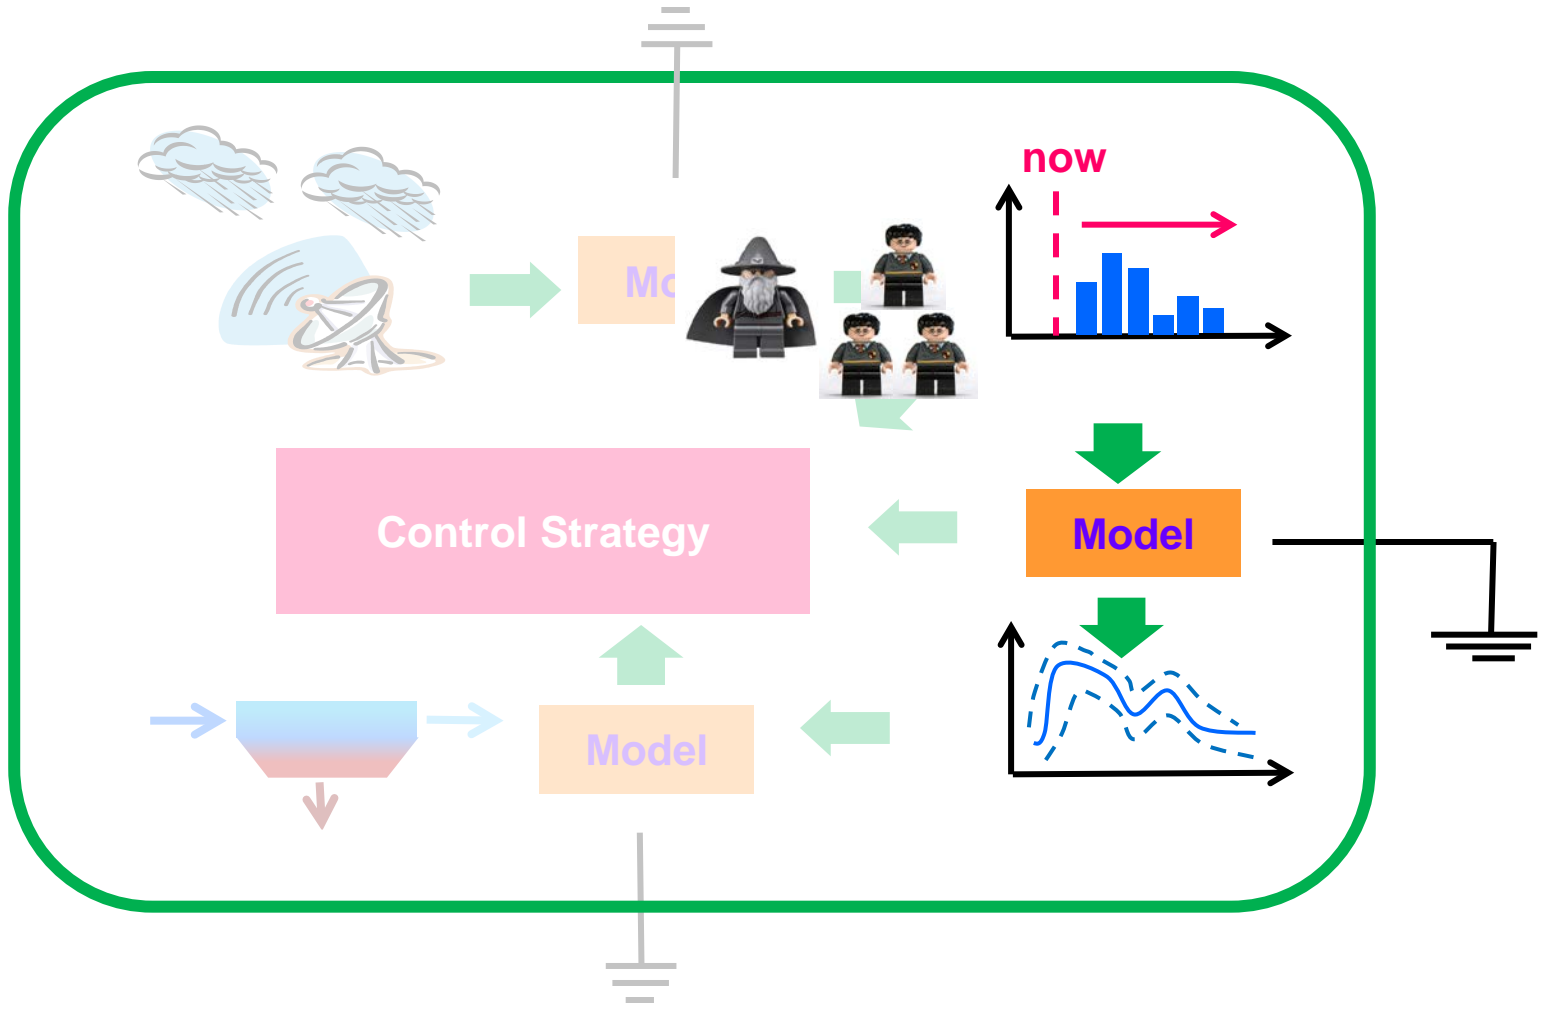

25 (physically based) models = 25 different results

The fellowship of SWI – the long journey

The happy operator

- Rainfall measurements
- Short-term rainfall forecasts
- Continuously updated hydrodynamic models
- Stochastic rainfall-runoff forecast
- WWTP forecast models
- MPC strategy addressing uncertainty

Model Predictive Control with uncertainty

- Rainfall forecasts are uncertain →

Stochastic runoff forecasts

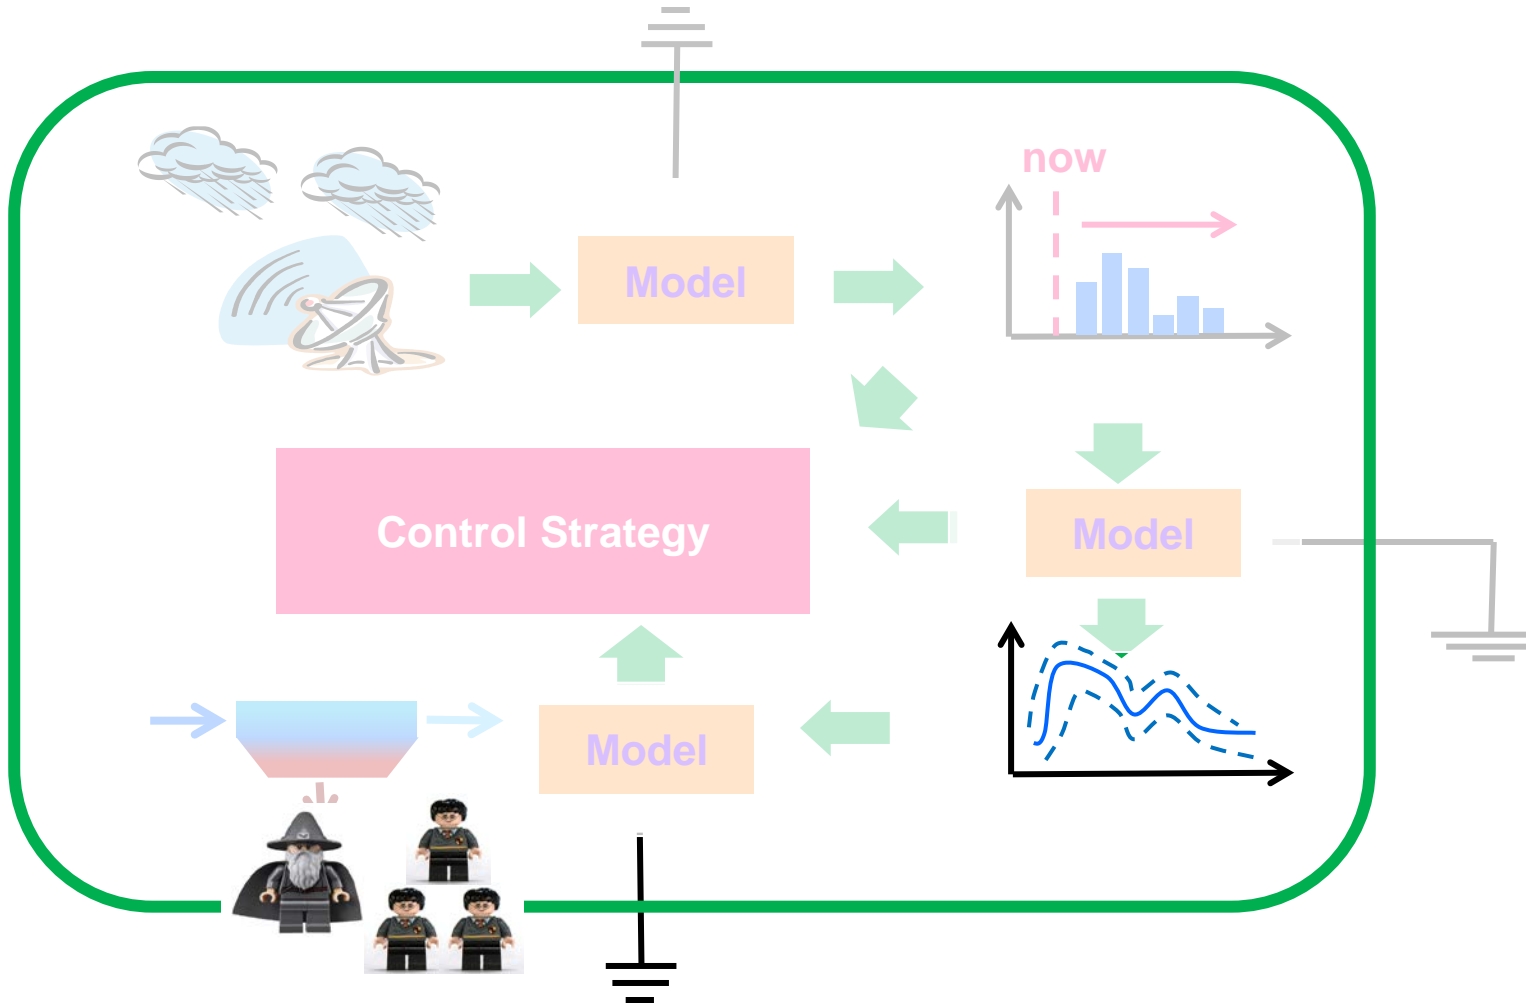

Stochastic runoff forecasts

The fellowship of SWI – the long journey

The happy operator

- Rainfall measurements
- Short-term rainfall forecasts
- Continuously updated hydrodynamic models
- Stochastic rainfall-runoff forecast
- WWTP forecast models
- MPC strategy addressing uncertainty

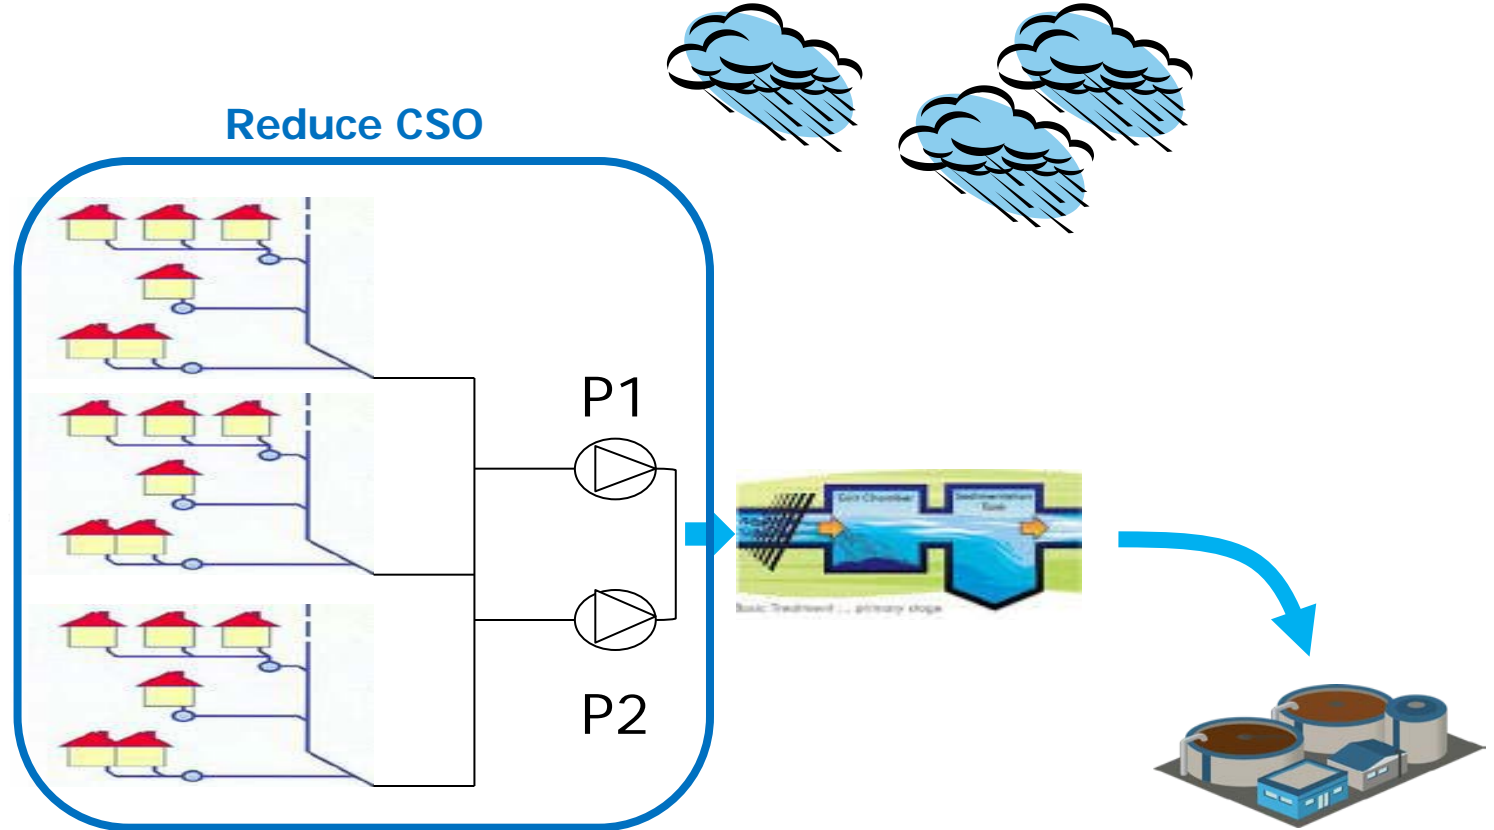

Controlling the WWTP based on energy prices

the Blue Kolding example

Controlling the WWTP based on energy prices – moving upstream

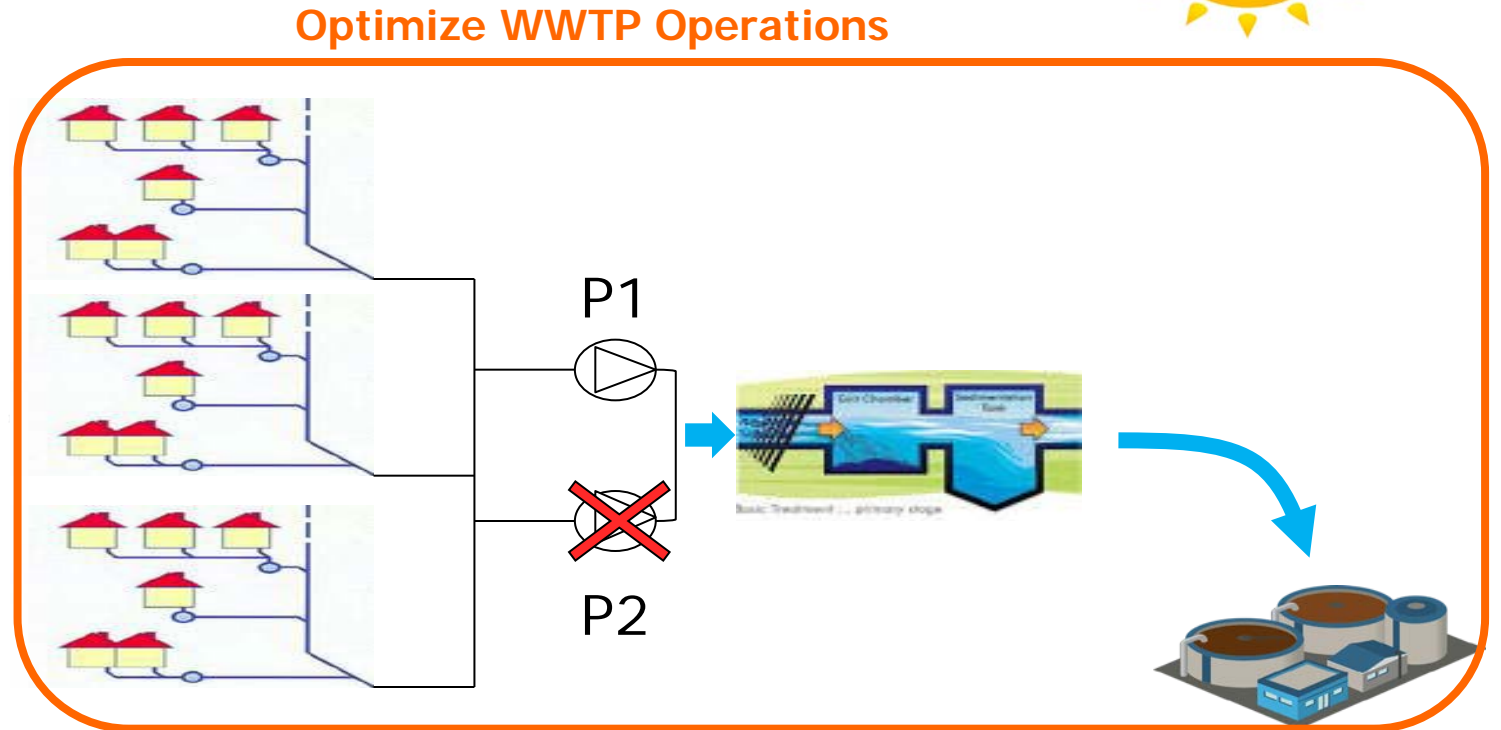

Sewer system annual Elspot savings

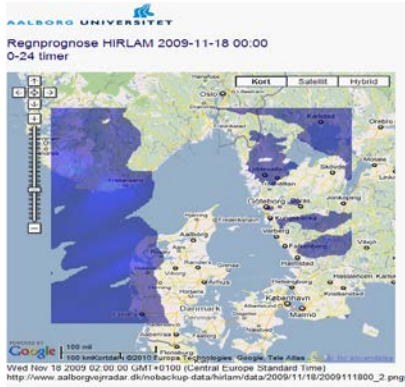

Controlling the WWTP based on energy prices – moving upstream

Sewer system annual Elspot savings

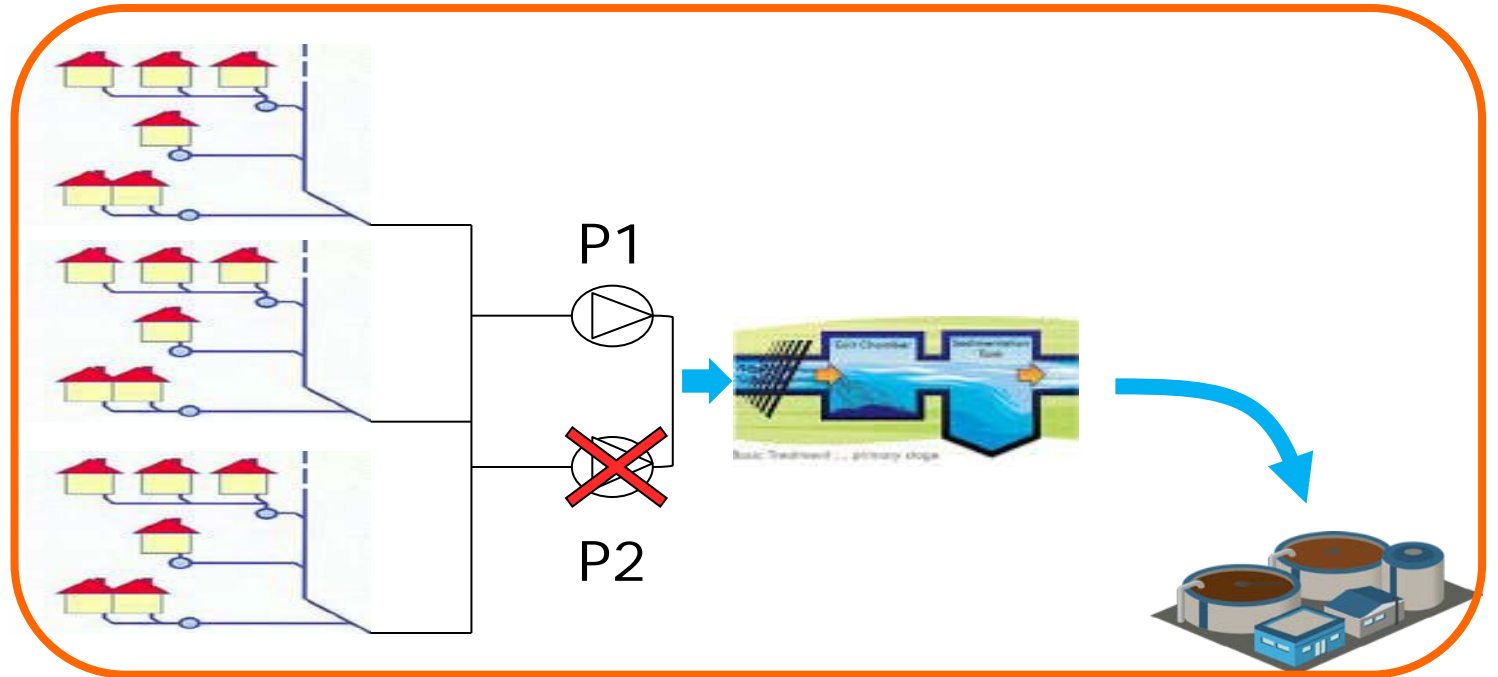

Controlling the WWTP based on energy prices – moving upstream

Numerical Weather Prediction models are used to switch between the two controls

Optimize WWTP Operations

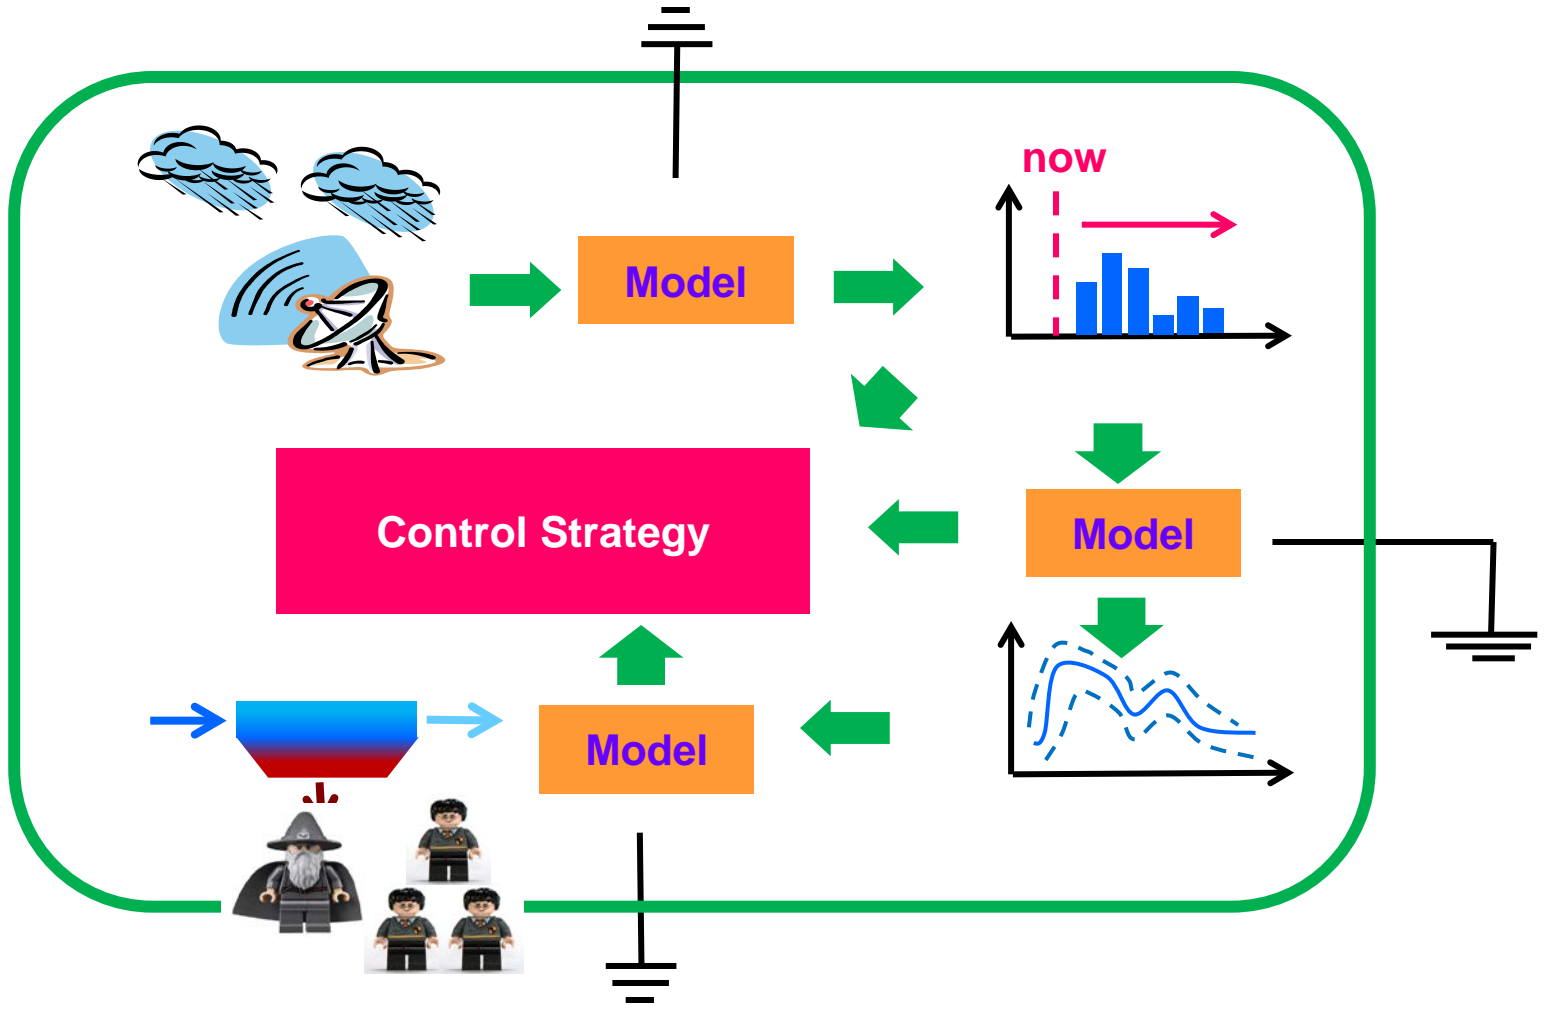

The fellowship of SWI – the long journey

The happy operator

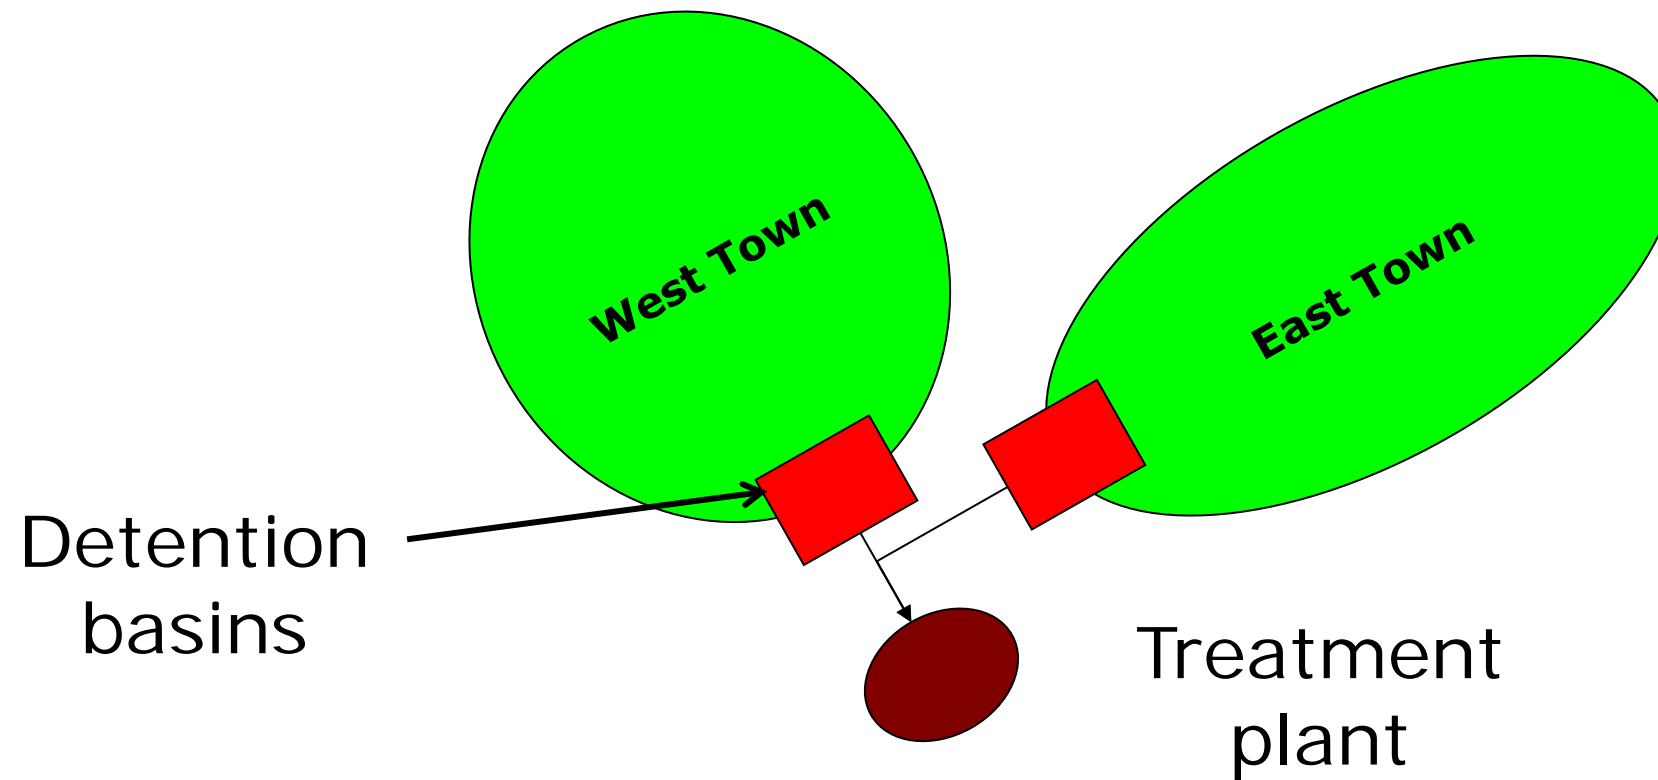

Measurements + Models + Forecasts + Uncertainty =

- Rainfall measurements
- Short-term rainfall forecasts
- Continuously updated hydrodynamic models
- Stochastic rainfall-runoff forecast
- WWTP forecast models
- MPC strategy addressing uncertainty

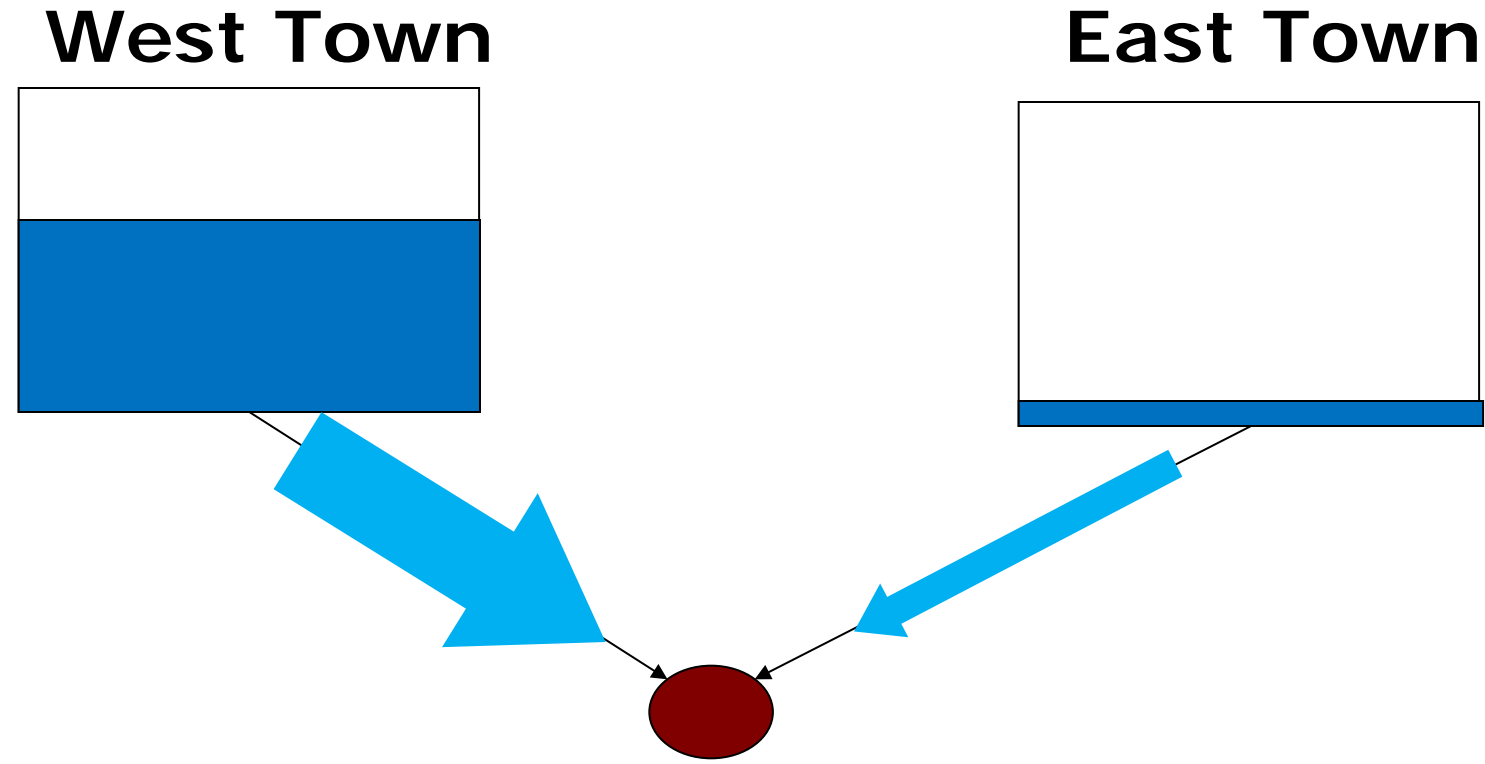

Why uncertainty matters

Didactical example

Real Time Control

Objective:
Maximize storage

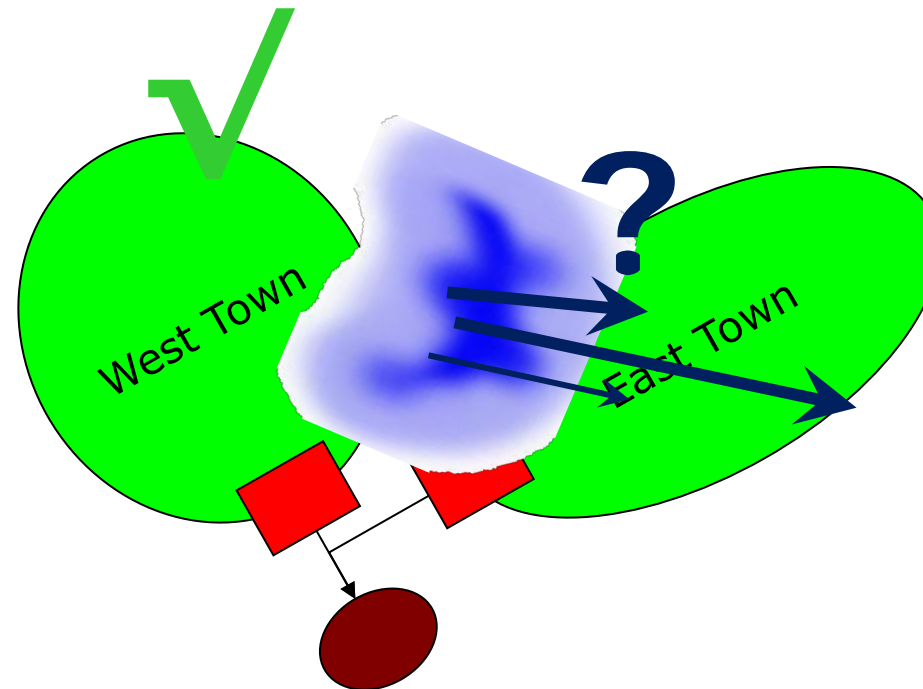

"Traditional" MPC

Objective:
Maximize future storage

Risk-based Model Predictive Control

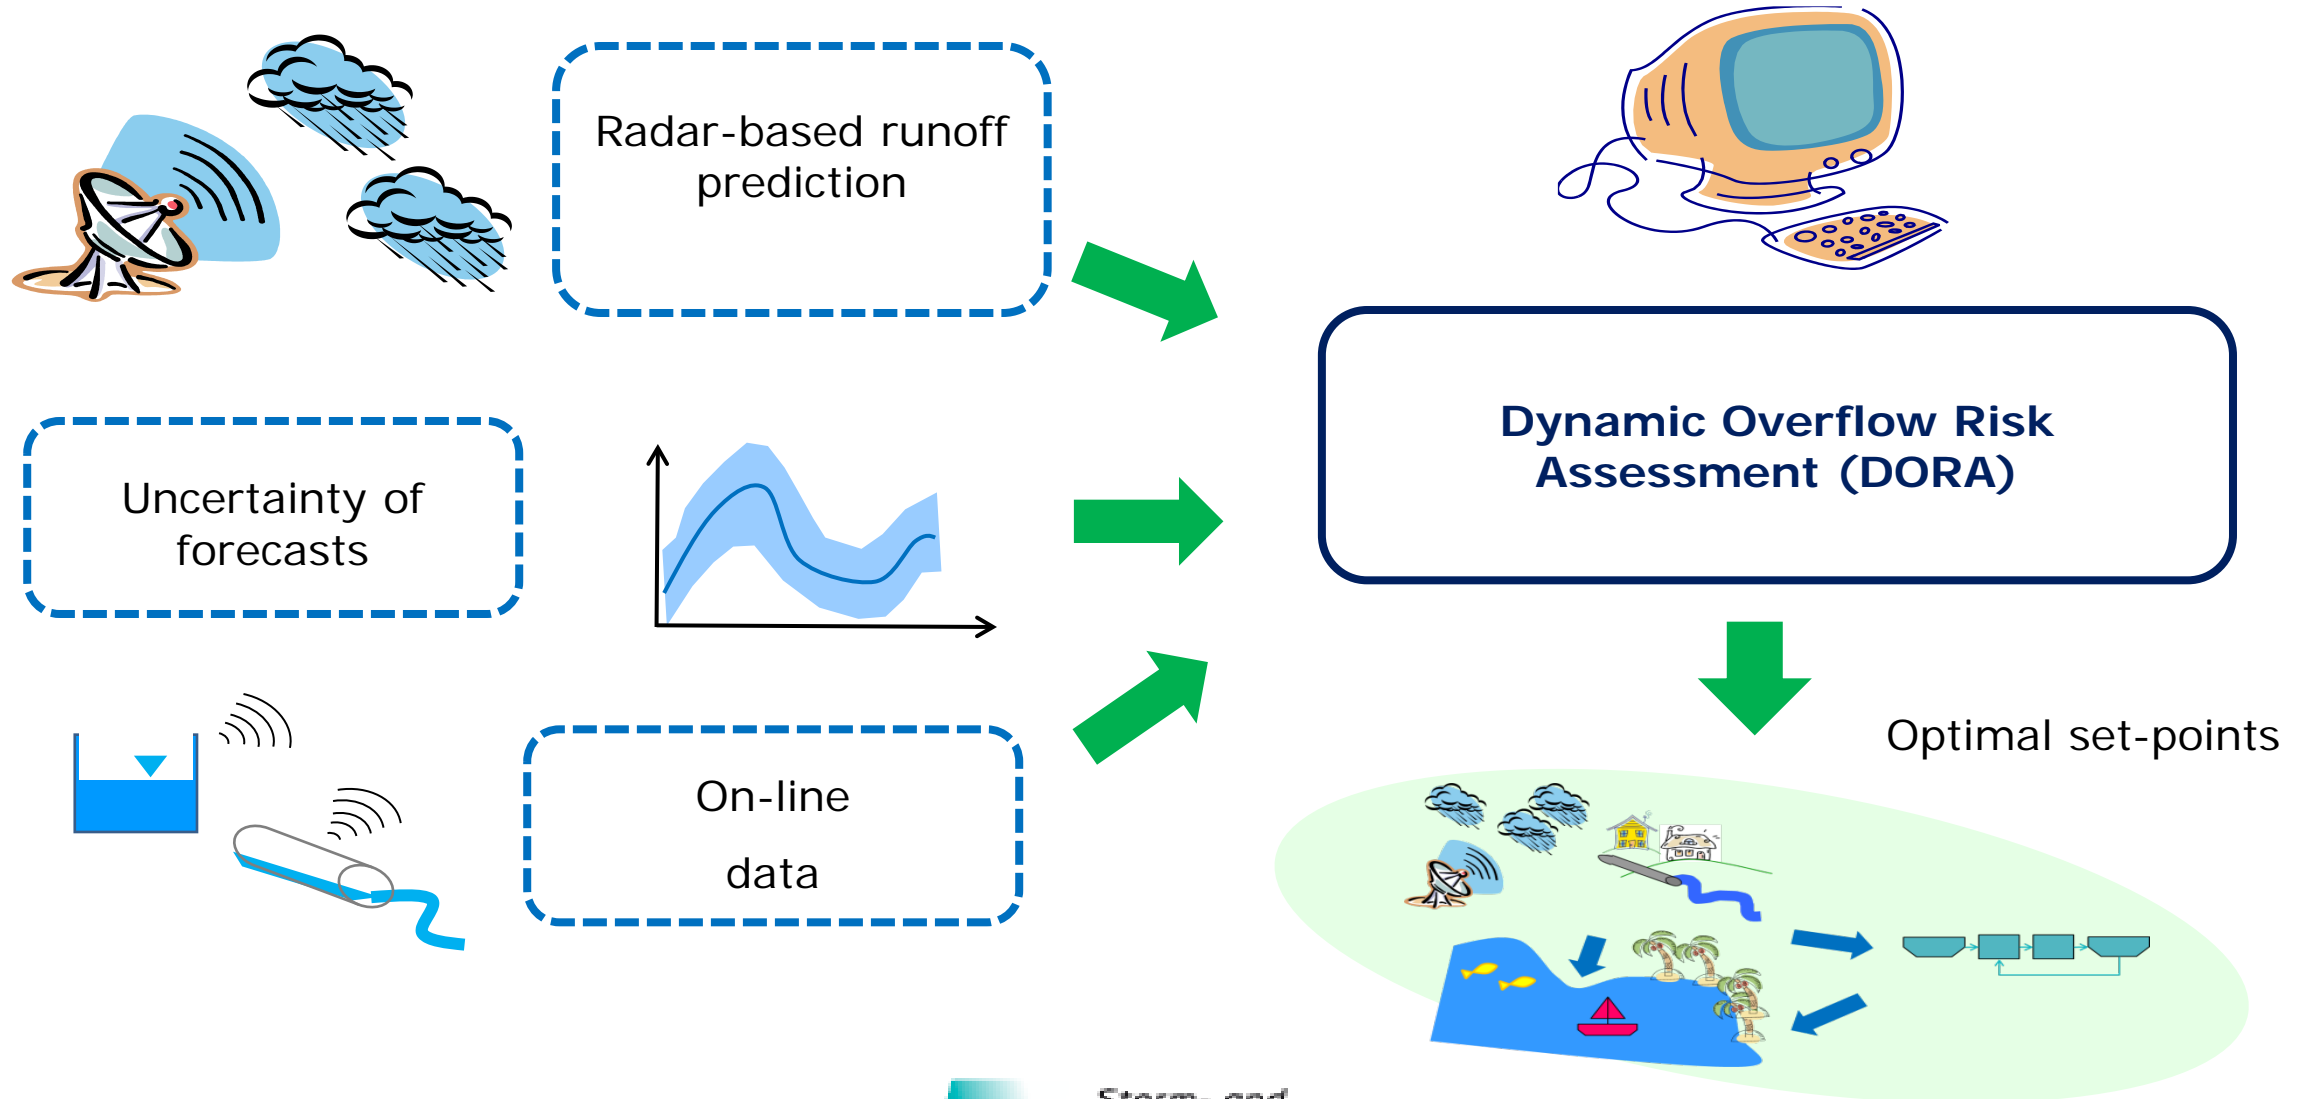

Rainfall evolution is uncertain

Risk-based Model Predictive Control

The importance of involving the final users

Dear smart people from university,
what wonderful tool did you
prepare for me?

If you use a stochastic
differential equation...

With a genetic algorithm
which minimizes risks you
will....

We have an Extended Kalman
Filter to assimilate data and...

??????

Can you please make a
if-then scheme of you
advanced control?

Thanks, but my system
works fine as it is

The importance of involving the final users

Dear smart people from university, what wonderful tool did you prepare for me?

If you use a stochastic differential equation...

- Making a smart tool is not enough – you need somebody ready to use it
- Collaboration between universities and final user is essential

???????

will....

Can you please make a if-then scheme of you DORA?

We have an Extended Kalman Filter to assimilate data and...

Thanks, but my system works fine as it is

Conclusions

towards a better environment with smarter sewer systems

- We can have a better environment if we use our sewers in a smarter way
- We have now new tools for on-line model-based operation of integrated urban wastewater systems (more than 10 years of research/development)
