ABSTRACT

Water is very important in our daily life. Without safety water every living thing in this planet will die. People can survive 7 to 10 days without foods but can survive 1 to 3 days without water (“National Ag Safety Database”, 2002). Human bodies consist of 70% of water. This statement proved that water is very important element in this planet to make sure every living thing can continue their life. Nowadays, people are concerned about water sources such as from fresh water, ground water and river for drink. Some of them are not safe and does not achieve standard of safe and healthy to drink and use. The purposed of this project is to solve this problem by predict the drinking water quality using Artificial Neural Network (ANN). It is focus on pH, manganese, iron and turbidity of water. A Back-propagation neural network is used in this project and it is fully develop using MATLAB. With the development of drinking water quality prediction, it provides the result either the water quality or not based on the trained water data. Within this result, the water company can improved the drinking water quality level to make sure the consumer get the healthy water.

Keywords: Drinking Water Quality, Artificial Neural Network (ANN), MATLAB, Back-propagation

TABLE OF CONTENTS

Content	Page
DECLARATION	i
ACKNOWLEDGMENT	ii
ABSTRACT	iii
CONTENTS	iv
LIST OF TABLES	x
LIST OF FIGURES	xi
CHAPTER 1 - INTRODUCTION	
1.1 Introduction	1
1.2 Background of the Research	3
1.3 Problem Statement	4
1.4 Objectives	4
1.5 Scope of Research	4
1.6 Significance of the Research	5
1.7 Organization of this Report	5
CHAPTER 2 – LITERATURE REVIEW	
2.1 Introduction	7
2.2 Prediction	7

Content	Page
2.3 Drinking Water Quality	8
2.4 Water Quality Measurement	8
2.5 Type of Water Sources and it Treatment	8
2.6 Nutrient in Drinking Water Quality	9
2.7 ANN in Quality Water Sector	11
2.7.1 Predicting Stream Water Quality using Artificial Neural Network	11
2.7.2 The Application of Artificial Neural Network for the Prediction of Water Quality of Polluted Aquifer	12
2.7.3 Modeling of Coagulant Dosage in a Water Treatment Plant	12
2.7.4 Application of Neural Network Technology in Water Color Remote Sensing Inversion of Inland Water Body Using TM Data	13
2.7.5 Use of Artificial Neural Network for Modeling Chlorine Residuals in Water Distribution System	14
2.7.6 A Neural Networks based Approach for Determining Fouling of Multi-Point Optical Fiber Sensors in Water System	15
2.8 ANN for Non-Water Quality Sector	15
2.8.1 A Simple Interface Agent	16
2.8.2 A Study on Rule Extraction from Neural Network Applied to Medical Databases	17
2.8.3 ANN Based Detection of OS Condition in Power System	18
