The journal's March issue (Vol. 16, No. 3), page 370, the authors' names inadvertently run-in, removing the spaces between the first and last names and deleting the "and" between the author's names. The printer sincerely regrets the error. The authors' names should have been printed as below:

# Investigation of Metal-Oligonucleotide Complexes by Nanoelectrospray Tandem Mass Spectrometry in the Positive Mode

Selina T. M. Monn and Stefan Schürch

Department of Chemistry and Biochemistry, University of Bern, Bern, Switzerland

---

The formation and fragmentation of multiply metal-coordinated oligonucleotides was studied by nanoelectrospray tandem mass spectrometry in the positive ion mode. Fundamental aspects of the gas-phase behavior of metal-oligonucleotide complexes are revealed. The addition of transition metal ions, such as iron(II), iron(III), and zinc(II), leads to very stable metal-oligonucleotide complexes which show heavily altered fragmentation patterns in contrast to uncomplexed oligonucleotides. The site of metal ion complexation was located by collision-induced dissociation (CID) experiments. It was found that all three metal ions investigated predominantly coordinate to the central phosphate groups of the oligonucleotides. Furthermore, it is demonstrated that the fragmentation of such complexes depends highly upon the metal ion complexed as well as on the sequence of the nucleobases in the oligonucleotide.
