2) *Institute of Botany, Academy of Sciences of the Czech Republic, CZ-252 43 Průhonice, Czech Republic; fax +420 2 6775 0031*

**Keywords:** Alliances, Associations, Classes, Code of Phytosociological Nomenclature, Orders, Phytosociology, Typification

**Abstract:** Following the “Index of new names” (THEURILLAT & MORAVEC 1998), the present work collects the names of syntaxa (in the sense of the Code of phytosociological nomenclature, BARKMAN et al. 1986) above subassociation rank typified in 1994. The list comprises 101 names of syntaxa; three names are added to the Index 1992 (THEURILLAT & MORAVEC 1995).

The “Index 1994” contains 101 typifications of names of syntaxa higher than the subassociation rank (sensu BARKMAN et al. 1986). In the addendum three typifications are added to the “Index 1992” (THEURILLAT & MORAVEC 1995). These names were compiled following consultation of the literature at the library of the Conservatoire et Jardin botaniques of the city of Geneva. The “Index” follows the same principles as “Index 1987” (THEURILLAT & MORAVEC 1990) to which reference will be made.

The symbols (O, \*, Δ) preceding the names indicate the nomenclatural legitimacy of the typification. Illegitimate or superfluous typifications – referring to articles 16–21 of the Code of phytosociological nomenclature – are preceded by O, i.e. 12 cases (12%) for the present “Index”. The asterisk (\*) indicates a typification requiring further bibliographical or nomenclatural verifications of its validity or authority (2 for the present “Index”). The category of “unchecked names” (Δ), introduced with the “Index 1993”, includes for verification those names whose validity could not be readily verified because the required bibliographical references were not available to the authors. In this way they are removed from the category of doubtful typifications in which they were previously included. The present “Index” contains 42 unchecked names (i.e. 41%).

With its 104 typifications, the following list may not be complete and the authors would welcome offprints concerning missing elements. Observations concerning the validity of typifications requiring further verification as well as of unchecked typifications would be also appreciated.
