

CLUH couples mitochondrial distribution to the energetic and metabolic status

Submitted by Elisabeth Planchet on Mon, 06/18/2018 - 18:17

Titre	CLUH couples mitochondrial distribution to the energetic and metabolic status
Type de publication	Article de revue
Auteur	Wakim, Jamal [1], Goudenege, David [2], Perrot, Rodolphe [3], Gueguen, Naïg [4], Desquiret-Dumas, Valérie [5], Chao de La Barca, Juan Manuel [6], Dalla Rosa, Ilaria [7], Manero, Florence [8], Le Mao, Morgane [9], Chapin, Stéphanie [10], Chevrollier, Arnaud [11], Procaccio, Vincent [12], Bonneau, Dominique [13], Logan, David [14], Reynier, Pascal [15], Lenaers, Guy [16], Khiati, Salim [17]
Editeur	Company of Biologists
Type	Article scientifique dans une revue à comité de lecture
Année	2017
Langue	Anglais
Date	1er Juin 2017
Numéro	11
Pagination	1940-1951
Volume	130
Titre de la revue	Journal of Cell Science
ISSN	0021-9533
Résumé en anglais	<p>Mitochondrial dynamics and distribution are critical for supplying ATP in response to energy demand. CLUH is a protein involved in mitochondrial distribution whose dysfunction leads to mitochondrial clustering, the metabolic consequences of which remain unknown. To gain insight into the role of CLUH on mitochondrial energy production and cellular metabolism, we have generated CLUH-knockout cells using CRISPR/Cas9. Mitochondrial clustering was associated with a smaller cell size and with decreased abundance of respiratory complexes, resulting in oxidative phosphorylation (OXPHOS) defects. This energetic impairment was found to be due to the alteration of mitochondrial translation and to a metabolic shift towards glucose dependency. Metabolomic profiling by mass spectroscopy revealed an increase in the concentration of some amino acids, indicating a dysfunctional Krebs cycle, and increased palmitoylcarnitine concentration, indicating an alteration of fatty acid oxidation, and a dramatic decrease in the concentrations of phosphatidylcholine and sphingomyeline, consistent with the decreased cell size. Taken together, our study establishes a clear function for CLUH in coupling mitochondrial distribution to the control of cell energetic and metabolic status.</p>
