#### CASH RECEIPTS FROM FARMING IN OHIO

#### 1972

Ohio cash receipts from farming totaled \$1,746,310,000 in 1972 -- up 18 percent from a year earlier and were the highest of record starting with 1924. Cash receipts from the sale of crops, livestock and livestock products amounted to 95 percent of the total, while government payments made up the remaining 5 percent.

At \$875,527,000, the 1972 sale of livestock and livestock products rose 13 percent from 1971 and accounted for 52.8 percent of the total receipts from farm marketings, compared with 54.9 percent in 1971. Cash receipts from crops, at \$781,205,000, rose 23 percent from a year earlier and accounted for 47.2 percent of the total receipts from crops and livestock, compared to 45.1 percent in 1971.

Soybean cash receipts for 1972 rose 63 percent from the previous year and for the first time were the largest single source of cash receipts to Ohio farmers. Cash receipts from corn rose 7 percent to \$197,385,000 and ranked fifth in importance as a source of cash receipts. Other crops showing increases in cash receipts included wheat, up 27 percent; potatoes, up 15 percent and hay, up 13 percent.

The two major livestock groups, dairy products, at \$280,306,000, and cattle and calves, at \$275,560,000, were up 5 percent and 19 percent, respectively. Dairy products were the number two source of cash receipts in 1972 while cattle and calves were next in importance. Hogs, at \$222,604,000, rose 27 percent from the previous year and ranked fourth in contribution to total cash receipts.

The five major sources of cash receipts -- soybeans with 18.5 percent of the total; dairy products with 16.9 percent; cattle and calves with 16.6 percent; hogs with 13.4 percent; and corn with 11.9 percent -- made up 77.3 percent of the total State cash receipts to farmers during the year of 1972.

At \$58,597,000, the feed grain program made up 65 percent of the total of all government payments in 1972. The wheat program totaled \$19,731,000; conservation \$4,711,000; wool act \$3,384,000; crop land adjustment \$1,655,000; sugar act \$1,476,000; and miscellaneous \$24,000.

Darke county was the leading county in 1972 with total cash receipts, which include receipts from livestock, livestock products, crops, and government payments of over \$54 million. The next four highest counties -- Mercer, Wayne, Wood, and Fulton each exceeded cash receipts of \$44 million for 1972. Leading counties by commodities were: Wayne, dairy products; Fulton, cattle and calves; Clinton, hogs; Mercer, poultry and eggs; Van Wert, soybeans; Wood, corn; Wood, wheat; Lorain, vegetables; Lake, greenhouse and nursery.

#### PROCEDURE

Estimates of cash receipts by county from farm marketings in Ohio were published initially in 1927 and annually since 1929. These county estimates of cash receipts are published by the Department of Agricultural Economics and Rural Sociology of the Ohio State University and the Ohio Agricultural Research and Development Center in cooperation with the Statistical Reporting Service of the U. S. Department of Agriculture. This bulletin contains the 1972 Ohio county cash receipts estimates, and revised 1971 estimates for the State.

Gross and Net Farm Income data are presented in Table III. The information is available only at the State level, but the relative income and expense situation of the Ohio farmer can be observed over a period of years.

<u>Cash Receipts</u> represent gross returns from the actual sale of crops and livestock during the calendar year. The value of home consumption and some inter-farm sales are not included as cash receipts. Production expenses such as hired labor, feed, fuel, fertilizer, and purchases of feeder animals are not subtracted from cash receipts. The addition of government payments to cash receipts provides a measure of gross cash income, or total cash receipts from farming.

Current cash receipts estimates for Ohio and other States appear in the USDA's <u>Farm Income State Estimates 1959-1972</u>, <u>FIS 222-Supplement</u>, August 1973. These estimates are prepared by the Economic Research Service of the U. S. Department of Agriculture from basic data provided by the Statistical Reporting Service, the Census of Agriculture, and other sources. The State estimates published in this bulletin may differ from previously published estimates due to revisions in marketings, inshipments, inventory numbers, and other data, as more complete information becomes available.

Data from milk market administrators provided a basis for allocating receipts of milk from producers at plants operating under the Federal Order to counties. Data from the Division of Animal Industry, Ohio Department of Agriculture provided information on the location by county of producers selling milk to dairy plants. The number of producers in each county was used as a basis of breaking down total receipts at plants not under Federal Order to counties. This assumes annual deliveries per producer to each plant would not differ significantly at the county level. Each grade of milk was considered separately in arriving at the county total cash receipts.

As in recent bulletins, the sale of dairy cows and veal calves has been included with the sale of cattle and calves. Poultry cash receipts include income from the sale of eggs, farm chickens, broilers, and turkeys during 1972 Because of the confidential nature of the data, cash receipts from turkey eggs and other poultry are included as other livestock. Included with sheep cash receipts are returns from wool sales as well as income from sale of sheep and lambs.

Cash receipts from the sale of greenhouse vegetables are included with vegetable cash receipts, and not with greenhouse and nursery. The county vegetable estimates are a combination of field grown vegetables and vegetables grown under glass. For purposes of ranking, potatoes were considered as separate from vegetable cash receipts. Cash receipts from fruit crops are made up of returns from small fruits as well as from tree fruits and nuts.

Two important factors influencing any comparison by counties are the size of the counties and the major source of cash receipts in each county. Table VI presents the average cash receipts per farm and per acre by county. These averages aid in the comparison of counties with similar farming practices better than a comparison of the total cash receipts. The 1964 and 1969 Census defined a farm as any tract operated as a unit of 10 or more acres, if the estimated sales of agricultural products for the year amounted, or normally would amount, to a least \$50; or if less than 10 acres, had sales of agricultural products totaling \$250 or more.

County estimates of cash receipts do not include the value of commodities used on farms. For example, producers may market grain and hay in the form of beef or milk rather than in its original form. By counties, the relative importance of some commodities would be different if the value of these commodities used on farms where produced were computed.

This bulletin has been prepared through the efforts of many people. Included are personnel of the Ohio Agricultural Stabilization and Conservation Service, Federal Milk Market Orders operating in Ohio, the Ohio Department of Agriculture, the Ohio Agricultural Research and Development Center and the Agricultural Research Service. Special recognition is due the professional and clerical work done by the staff of the Ohio office of the Statistical Reporting Service, particularly Mr. Gary Bovard and Mr. George W. Hill. However, the greatest recognition is due to the large number of Ohio farmers and agri-businessmen for their interest and help in providing the basic data used in compiling the information for this bulletin.
