All publications of the Ohio Agricultural Research and Development Center are available to all on a nondiscriminatory basis without regard to race, color, national origin, sex, or religious affiliation.

THE DEPARTMENT OF HORTICULTURE*

The Department of Horticulture at The Ohio State University has long been recognized for excellence in horticulture. It is one of the oldest departments on the campus, being formed in January 1881 as a "Committee of Horticulture and Botany" in the School of Agriculture. This first committee was headed briefly by Mr. A.P. Morgan, but soon became the responsibility of Professor William R. Lazenby. In 1891, Botany became a separate department, and Horticulture, which was then joined with Forestry, was headed by Professor Lazenby, who continued in this position until 1908. In 1969, the Forestry Division of the department was separated from Horticulture and attached to the then new School of Natural Resources.

Course offerings initially were Horticulture 1 in the first and third terms of the Freshman year and Horticulture 2 in all three terms of the Junior year. These courses were required of all students in Agriculture. The number of courses increased until today there are 70 courses for students specializing in the various aspects of Horticulture.

From the beginning, the department continued to grow until currently there are 35 fulltime, professional faculty positions assigned to the department. Twenty-three are located in Howlett Hall on the OSU campus and 12 are located in Gourley Hall on the OARDC campus. There is also one Area-Extension Horticulturist affiliated with the department and located on the campus of the Ohio Agricultural Research and Development Center.

Currently, there are approximately 350 undergraduate majors in the 5 broad departmental program areas--Landscape Horticulture, Floriculture, Pomology, Vegetable Crops, and Fruit and Vegetable Processing. There are also 82 graduate students enrolled in various programs of the department.

Close coordination exists between the faculty located on the Wooster and Columbus campuses. The department is organized with a Chairman, based in Columbus, with the responsibility for the direction of the total research, extension and resident instruction programs of the department. An Associate Chairman of the department is located at Wooster and shares in the responsibilities.

In Columbus, the department is housed in the modern, Horticulture, Forestry and Food Technology Center--Howlett Hall. This facility is located on the west campus and was first occupied in the fall of 1969. The facility comprises 62,500 sq. feet of space for staff offices, classrooms, laboratories and graduate student offices, and includes a 6,400 sq. foot modern food processing pilot plant. There is also 21,300 sq. feet of greenhouse space and a modern headhouse with growth chamber facilities attached to Howlett Hall. Excellent facilities are also available on the OARDC campus in Wooster with the department housed in Gourley Hall, completed in 1959, with 19,000 sq. feet of office and laboratory space and an adjacent modern, and recently renovated, greenhouse and headhouse complex.

* Originally published HORTSCIENCE, Vol. 14(3), June 1979, modified January 1983.

A recognized strength and integral part of the total departmental effort is a strong food processing and technology program. This provides the opportunity to follow the production of a commodity from seed to consumer.

The department is assigned three field research units at Wooster, a teaching and research farm on the Columbus campus, and an additional farm 25 miles southeast of Columbus. The Ohio Agricultural Research and Development Center operates 12 research branches that are strategically located throughout Ohio, that play an important role in the field research programs of the department. Active fruit research programs are carried out at four of these branches and vegetable research at three. Recently land was purchased for the development of a branch that will be predominantly available for vegetable research efforts on mineral soils.

The fundamental philosophy of the department is to serve the people of Ohio through working with the various horticultural interests of the state and to assist them in reaching their full potential. The department is dedicated to both undergraduate and graduate teaching programs designed to provide the depth of training needed by students as they assume their varied roles in horticulture. The department maintains a very strong relationship with industry groups, most of which have research and education committees that work with research and extension faculty in an advisory capacity. There also exists, within Ohio, excellent cooperative relationships between the several departments involved with horticultural crops. The extension programs of the department are closely integrated with the research efforts and organized in such a way as to facilitate the rapid adoption of new technology.

The concept of compiling a record of the Horticulture Departmental Faculty and of those who had earned advanced degrees was conceived by Dr. F.O. Hartman as part of the Department's Centennial Celebration. These lists have been compiled and incorporated into Horticulture Series 528, which was distributed for the first time on the occasion of Professor Hartman's Retirement Recognition, March 12, 1983.
