TRENDS IN OHIO AGRICULTURE: AGRICULTURAL SALES, COMMERCIAL FARMS, AND LIVESTOCK

Introduction

Commercial agriculture in Ohio is dynamic. Significant changes are occurring in the dispersion of farm income and resources throughout the state. This publication provides an overview of the changes in farm income, numbers of commercial farms, and livestock resources on farms over the five-year U. S. Census of Agriculture period, 1964 to 1969.

The first table presents the total market value of agricultural products sold and the number of commercial farms, by county. The market value of farm sales are in millions of dollars. Counties are ordered by rank with regard to 1969 farm sales, with their rank in 1964 also shown. The total number of commercial farms, that is, farms with annual sales of agricultural products of \$2500 or more, for both 1969 and 1964 is presented along with the corresponding county ranks by farm numbers. Therefore, the absolute levels of farm sales and number of commercial farms is shown for each county, as well as the standings of each county relative to others. The value of farm sales serves as an important indicator of economic activity in the agricultural sector of a county, while the number of commercial farms is an indicator of the size of potential audience for informative and educational programs for commercial agriculture.

A number of interesting comparisons can be made for each county. For example, a county's rank on value of farm sales in 1969 can be compared to its rank in 1964. Overall, there were 40 counties that ranked higher in 1969 than in 1964, 43 that ranked lower, and 5 (Henry, Crawford, Franklin, Tuscarawas, and Gallia) that ranked the same in both years. Four counties moved up in the rankings by 10 or more places: Ross from 56th to 41st (up 15), Highland from 37th to 23rd (up 14), Fayette from 28th to 17th (up 11), and Holmes from 36th to 26th (up 10). Three counties slipped by 10 places or more in the rankings on farm sales: Lorain from 17th to 34th (down 17), Lucas from 38th to 51st (down 13), and Medina from 44th to 54th (down 10).

The absolute value of farm sales in 1969 can be compared with the 1964 level for each county. Increases were registered in 82 counties, with Mercer county showing the largest increase, \$10.4 million, from \$25.3 million in 1964 to \$35.7 million in 1969. One county, Hamilton, had no change, and five counties (Cuyahoga, Geauga, Hocking, Lucas, and Trumbull) had slight decreases.

A comparison can be made of a county's rank with respect to numbers of commercial farms. State-wide, 42 counties ranked higher in terms of commercial farm numbers in 1969 than in 1964. Columbiana led in this category, with an upward jump of 12 places from 65th to 53rd. No other county moved up as many as 10 places. Ten counties ranked the same in

1969 as in 1964, and 36 counties ranked lower in 1969. Lorain county dropped 17 places, from 34th to 51st, and Ashtabula county county dropped 16 places, from 36th to 52nd. These were the only counties to drop 10 places or more in the rankings.

The absolute number of commercial farms in 1969 can also be compared with 1964. There were increases in 26 counties and decreases in 62 counties. Vinton county had the greatest percentage increase in commercial farms, a 48.3 percent gain. The largest absolute increase was in Brown county, where the number of commercial farms increased from 1118 to 1218.

A comparison of farm sales with number of commercial farms yields insight into the average market value of agricultural products sold per commercial farm. Counties that rank higher in farm sales than in numbers of commercial farms have relatively high sales of farm products per farm. Pickaway, Madison, and Clark counties, for example, all rank high in value of sales and relatively low in commercial farm numbers. These counties, therefore, are among the highest in per farm sales. Counties that rank about the same in both value of sales and in farm numbers have per farm sales near the average for the state as a whole, and those counties that rank lower in value of sales than in numbers of commercial farms have below average per farm sales.

Livestock numbers on Ohio farms and the number of farms with livestock are reported in the remainder of the tables. Data are presented by counties, Extension areas and state for the years 1969 and 1964. These tables are:

All cattle and calves

Cows and heifers that have calved

Milk cows

Hogs and pigs

Sows farrowed Dec. 1 - May 31

Sows farrowed June 1 - Nov. 30

Sheep and lambs

Chickens three months + (1969), and four months + (1964)

Hens and pullets of laying age

These tables provide a guide to trends of number of livestock farms and head of livestock in each county. Generally, both livestock numbers and livestock farms in Ohio have declined during the five year census period of from 1964 to 1969.
