The Estimated Gross Cash Income From the Sale of Agricultural  
Products from Ohio Farms, by Counties - 1933, 1934 and 1935

This bulletin presents the results of a study of the gross cash income from the sale of agricultural commodities from Ohio farms by counties in 1933, 1934 and 1935. Similar estimates have been made for 1927, 1929, 1930, 1931 and 1932, the results of which are found in Mimeograph Bulletins No. 22, No. 27, No. 48 and No. 60 of the Department of Rural Economics, Ohio State University and the Ohio Agricultural Experiment Station.

Some changes have been made in the method of calculation for certain products due to changes and discontinuation of previous sources. Certain items may not be completely comparable with figures for previous years. Although the completeness and reliability of certain information is slightly questionable, nevertheless a fair picture of the sources of agricultural income is given by this study. As time goes on and new source data become available a greater degree of accuracy will be attained in this study both as to total income and the per cent to be allocated to each individual product.

In this study, gross cash income is used to denote the actual total income to the farm from the sale of any agricultural commodity. There are a few exceptions, especially in the case of corn or any of the feed crops. A large amount of these crops are sold to other farms in the same county. Sales to neighboring farms in the same county have not been included in this study as sales for that county. These data herein do not indicate the relative importance of the various enterprises, but rather their importance as sources of income through sales. Thus, corn, if all fed on the farm where grown would not be included at all.

The data used as a basis for this study were obtained from census publications, figures taken from the State-Federal Crop and Livestock Estimates, information previously compiled by the Department of Rural Economics, Ohio State University, and the best judgment and opinion of experts in the several agricultural enterprises.

All agricultural products have been included in this study with a few minor enterprises, such as honey and wax, and flowers excepted. These items are not a very large part of the income in any county. At present lack of data makes it impossible to set up a reliable method of estimating the income from these products.

As pointed out above, the data given here do not indicate the total value of agricultural production. It is only the amount received for that portion of the production which was sold. The value of that portion consumed on the farm as feed, seed, or for home use has not been included. Neither does it include the other sources of income of farmers such as income from outside work, or interest on outside investment. This study does not contain payments made to farmers for participation in the program of the Agricultural Adjustment Administration. A separate table shows the payments by counties by individual programs. In other words, the value of total production or of the total income to farmers would be much greater than the amount given in this report. The prices used were farm prices rather than market prices.

Perhaps a brief explanation is necessary stating what has been included under some of the enterprise headings. Under the heading "Dairy" has been included the income from the sale of dairy products, veal calves and cull dairy cows, while under the heading "Cattle" has been included the income from the sale of any cattle

for meat purposes except veal calves and cull dairy cows. It should be noted that the cost of feeder cattle purchased has not been deducted from cattle sales. The heading "Poultry" has been taken to mean the income from both eggs and poultry meats, while "Sheep" includes wool and mutton. "Truck" includes those vegetables grown for sale outside of greenhouses, excluding potatoes which were estimated separately.

The counties have been listed in nine groups for ease of comparing counties which have essentially the same type of agriculture. When arranged alphabetically, Allen follows Adams County, but scarcely anyone would be interested in comparing the two, since they are in nearly opposite corners of the State, and follow quite different types of agriculture. The group names refer to the position of the counties within the State.

Owing to the fact that there is such a great variation in the size of counties, the total gross cash income is unsatisfactory as a means of comparing two counties. For that reason it was thought advisable to calculate the gross cash income per farm and per acre. The total gross income was divided by the number of acres of all land in farms and by the number of farms as given by the 1935 census to secure the above values. It should be noted that the low income per acre was largely due to the fact that the acreage designated in the census as "all land in farms" includes considerable areas of land not actually under cultivation and some not even used for pasture.

In the following tables the number following each enterprise represents the percentage of the total gross cash income derived from that enterprise in the county. These percentages are given only as approximations. In 1933 dairying ranked first in the State as a whole, and also in fifty-nine counties. Hogs ranked first in twenty-two counties; tobacco in two counties; poultry, fruit, truck crops, greenhouse products, and nursery products in one county each. In 1934 dairying ranked first in the State and first in fifty-eight counties. Hogs ranked first in twenty-three counties; corn in two counties; poultry, fruit, truck crops, greenhouse products, and nursery products in one county each. In 1935 dairying ranked first in the State and first in fifty-seven counties. Hogs ranked first in nineteen counties; corn in four counties; poultry in three counties; fruit in two counties; truck crops, greenhouse products and nursery products in one county each.

The following tables give, by counties for the years 1933, 1934 and 1935, the gross cash income from the sales of farm products, and the six leading sources of income arranged in order of importance; also, the relative importance of each expressed as a percentage of total income from sales. They also show payments received by farmers for participation in the Agricultural Adjustment Administration program by specific programs, income from sales alone, and the total income including rental and benefit payments.

The Estimated Gross Cash Income From the Sale of Agricultural Products From the Farm and the Per Cent of the Total From Each of the Most Important Enterprises - 1933
