EXPLANATIONS

Estimates of acreage, yield per acre, total crop production, numbers of livestock on farms, and prices of crops and livestock products, unless otherwise stated, are based upon data furnished by the reporters of the Federal-State Cooperative Crop and Livestock Reporting Service. In many instances the yield per acre for various crops is computed by dividing the production by the acreage harvested.

Monthly crop and livestock prices are those of the fifteenth of the month unless otherwise indicated. Prices used in computing the value of total production of crops are weighted average prices for the particular crop year (except for tame hay).

Estimated gross cash income from the sale of products from Ohio farms and from rental and benefit payments, 1910-1942, was prepared by the Department of Rural Economics, The Ohio State University and the Ohio Agricultural Experiment Station.

ACKNOWLEDGMENTS

The authors are greatly indebted to the large groups of Ohio farmers and people closely connected with agriculture who so splendidly cooperated by furnishing information monthly or by supplying special information at various times during the year.

We are also very grateful to the postmasters who, through the rural mail carriers, distributed and collected the livestock and acreage survey cards, which furnish information regarding changes in crop acreage and numbers of livestock on farms from year to year.
