CASH RECEIPTS FROM FARMING IN OHIO

1974

Ohio cash receipts from farm marketings totaled \$2,505,882,000 in 1974 -- up 19 percent from a year earlier and were the highest of record since 1924. Cash receipts from the sale of crops, livestock and livestock products amounted to 99.9 percent of the total cash receipts plus government payments, while government payments alone made up the remaining 0.1 percent, the lowest since 1960.

At \$1,507,509,000, the 1974 sale of crops rose 43 percent from 1973 and amounted for 60.2 percent of the total cash receipts from farm marketings, compared with 50.3 percent in 1973. Cash receipts from livestock and livestock products, at \$998,323,000 were down 4 percent from a year earlier and accounted for 39.8 percent of the total receipts from crops and livestock marketings, compared to 49.7 percent in 1973.

Soybean cash receipts for 1974, at \$529,211,000, rose 28 percent from the previous year and for the second consecutive year was the largest single source of farm income. Cash receipts from corn increased 37 percent to \$434,514,000 and ranked second in importance as a source of cash receipts. Wheat cash receipts tripled in 1974 and are now the sixth most important commodity in Ohio. Most other crops showed increases in cash receipts from the previous year, with sugar beets and greenhouse and nursery leading the way in percentage increases with 269 percent and 89 percent respectively.

In the major livestock groups, cash receipts from dairy products increased 14 percent from previous year to \$353,654,000 and improved its ranking to third most important commodity.

Hogs, at \$258,360,000 and cattle, at \$249,684,000 decreased 4 percent and 20 percent respectively. As a result of low livestock prices in 1974, cattle tumbled from second in rankings to fifth while hogs moved up one position to fourth. Poultry and eggs had cash receipts of \$113,895,000 -- a 12 percent decline in revenue and dropped one position to seventh.

In 1974, Darke County again led the state in total cash receipts with a total of \$88 million compared to \$83 million in 1973. The next four highest counties: Mercer, Putnam, Wood and Fulton, each exceeded \$63 million in cash receipts.

Leading counties by commodities were: soybeans, Darke; corn, Darke; dairy products, Wayne; hogs, Clinton; cattle & calves, Fulton; wheat, Wood; poultry & eggs, Mercer; greenhouse and nursery, Lake; vegetables, Huron.

PROCEDURE

Ohio estimates of cash receipts by county from farm marketings were published initially in 1927 and annually since 1929. These county estimates of cash receipts are published by the Department of Agricultural Economics and Rural Sociology of the Ohio State University and the Ohio Agricultural Research and Development Center in cooperation with the Statistical Reporting Service of the U. S. Department of Agriculture. This bulletin contains the 1974 Ohio county cash receipts estimates, and revised 1973 estimates for the State. County estimates of production by various commodities are published annually in the Ohio Agricultural Statistics bulletin.

Gross and Net Farm Income data are presented in Table III. Six years of the relative income and expense data show the increase in realized and net farm income.

Cash Receipts represent gross returns from the actual sale of crops and livestock during the calendar year. The value of home consumption and some inter-farm sales are not included as cash receipts. Production expenses such as hired labor, feed, fuel, fertilizer, and purchases of feeder animals are not subtracted from cash receipts. County estimates of cash receipts from marketings are derived by allocating state estimates to counties on the basis of survey and census indications weighted by a percent marketed per district.

Data from milk market administrators provided a basis for county allocation of the receipts of milk from producers at plants operating under the Federal Order. The Division of Animal Industry, Ohio Department of Agriculture provided information on the location by county of producers selling milk to dairy plants. The number of producers in each county was used as a basis of breaking down total receipts at plants not under Federal Order to counties. This assumes annual deliveries per producer to each plant would not differ significantly at the county level. Each grade of milk was considered separately in arriving at the county total cash receipts.

The sale of dairy cows and veal calves has been included with the sale of cattle and calves. Poultry cash receipts include income from the sale of eggs, farm chickens, broilers, and turkeys during 1973. Because of the confidential nature of the data, cash receipts from turkey eggs and other poultry are included as other livestock. Sheep cash receipts contain wool, sheep and lamb sales.

Cash receipts from the sale of greenhouse vegetables are included with vegetable cash receipts, and not with greenhouse and nursery. The county vegetable estimates are a combination of field grown vegetables and vegetables grown under glass. For purposes of ranking, potatoes were considered as separate from vegetable cash receipts. Cash receipts from fruit crops are made up of returns from berries, grapes and tree fruits and nuts.

Current cash receipts estimates for Ohio and other States appear in the USDA's Farm Income State Estimates 1961-1974, Supplement, September 1975. These estimates are prepared by the Economic Research Service of the U. S. Department of Agriculture from basic data provided by the Statistical Reporting Service, the Census of Agriculture, and other sources. The county estimates published in this bulletin may differ from previously published estimates due to revisions in marketings, inshipments, inventory numbers, and other data, as more complete information becomes available.

Government payments included in Table I and Table VI are outright payments of monies, the bulk of which are generated from conservation cost sharing, feed grain and wheat disaster payments, and idemnity payments. These county figures are furnished by the Ohio Agricultural Stabilization and Conservation Service. The addition of government payments to cash receipts provides a measure of gross cash income, or total cash receipts from farming.

Table VI presents the average cash receipts per farm and per acre by county. A farm is defined as any tract operated as a unit of 10 or more acres, or the estimated sales of agricultural products for the year amounted, or normally would amount to at least \$50; or if less than 10 acres but had sales of agricultural products totaling \$250 or more. These averages aid in the comparison of counties with similar farming practices better than a comparison of total cash receipts. Table V illustrates the leading counties per commodity and Table VII the leading commodity per county.

This bulletin has been prepared through the efforts of many people. Included are personnel of the Ohio Agricultural Stabilization and Conservation Service, Federal Milk Market Orders operating in Ohio, the Ohio Department of Agriculture, the Ohio Agricultural Research and Development Center and the Agricultural Research Service. Special recognition is due the professional and clerical work done by the staff of the Ohio office of the Statistical Reporting Service. However, the greatest recognition is due to the large number of Ohio farmers and agri-businessmen for their interest and help in providing the basic data used in compiling the information for this bulletin.

TABLE I

CASH RECEIPTS FROM FARM MARKETINGS AND GOVERNMENT PAYMENTS, OHIO, 1940-1974

Year	Farm Marketings			Government Payments	Total Cash Receipts and Government Payments	Percent of All Commodities
