

# Additional Insights into Hypericum perforatum Content: Isolation, Total Synthesis, and Absolute Configuration of Hyperbiphenyls A and B from Immunomodulatory Root Extracts

Submitted by Séverine Derbre on Tue, 08/21/2018 - 09:36

Titre	Additional Insights into Hypericum perforatum Content: Isolation, Total Synthesis, and Absolute Configuration of Hyperbiphenyls A and B from Immunomodulatory Root Extracts
Type de publication	Article de revue
Auteur	Bréard, Dimitri [1], Viault, Guillaume [2], Mézier, Marie-Charlotte [3], Pagie, Sylvain [4], Bruguière, Antoine [5], Richomme, Pascal [6], Charreau, Béatrice [7], Derbré, Séverine [8]
Pays	Etats-Unis
Editeur	American Chemical Society
Type	Article scientifique dans une revue à comité de lecture
Année	2018
Langue	Anglais
Date	2018
Numéro	8
Pagination	1850-1859
Volume	81
Titre de la revue	Journal of Natural Products
ISSN	0163-3864
Résumé en anglais	<p>Phytochemical investigation of the root extracts of <i>Hypericum perforatum</i> led to the isolation of two biphenyl derivatives named hyperbiphenyls A and B (1 and 2) and four known xanthones (3–6). These structures were elucidated by spectroscopic and spectrometric methods including UV, NMR, and HRMS. The absolute configuration of the biphenyl derivatives was defined by two different approaches: biomimetic total synthesis of racemic hyperbiphenyl A followed by <math>^1\text{H}</math> and <math>^{19}\text{F}</math> NMR Mosher's esters analysis and stereoselective total synthesis of hyperbiphenyl B, permitting assignment of the S absolute configuration for both compounds. The bioactivity of compounds 1–6 toward a set of biomolecules, including major histocompatibility complex (MHC) molecules expressed on vascular endothelial cells, was measured. The results showed that the major xanthone, i.e., 5-O-methyl-2-deprendyrlheediaxanthone B (3), is a potent inhibitor of MHC that efficiently reduces HLA-E, MHC-II, and MICa biomolecules on cell surfaces.</p>
