9 **Abstract**

10 This paper explains how the organizational learning concept is used by managers in a global
11 Korean company to promote group work, information sharing and an open communication
12 style in order to produce a high level of customer service. Previously collected data from a set
13 of in-depth personal interviews undertaken with three senior managers in a Korean
14 electronics company were analyzed and interpreted using the grounded theory approach, and
15 a number of propositions are put forward. The research findings show that managers in a
16 chaebol deploy organizational learning to identify skilled and knowledgeable staff, and
17 improve the organization's capability by placing emphasis on developing harmonious,
18 mutually oriented relationships that permeate throughout the organization. Top management
19 demand that staff identify with government economic objectives and align the organization's
20 strategy accordingly so that the products produced are marketable. To achieve this, the
21 organization fosters continual interaction among managers throughout the organization's
22 hierarchy. The chaebol's organizational learning model encapsulates a 'Corollary' (continual
23 communication) and 'Tools' (cultural influence and relationship management), and manifests
24 in a unique strategy that allows management systems to evolve naturally.

1. Introduction

In order to achieve a high level of customer service (marketing dimension), marketing managers are placing emphasis on communication, information sharing and are assessing how the organization's overall marketing strategy (marketing dimension) facilitates a consistent service offering (Parasuraman, Zeithaml & Berry, 1985; Jarratt & Stiles, 2010). This is supportive of the strategic marketing approach (Aaker, 1992) and differentiation (Deshpande, Farley & Webster, 1993), hence it can be said that strategy emerges from the marketing process itself because "serving customers better" (Baker, 1996) is about understanding the linkage between market characteristics, customer perceptions and meeting the expectations of end users. The work of Rust, Thompson, and Hamilton (2006) underpins this view and marketers are encouraged to establish a threshold (i.e., price, quality and level of service) that is acceptable to end users and various stakeholders. Product capability is central and Gonzalez-Padron, Chabowski, Hult and Ketchen (2010) have added to our understanding by explaining how shared learning (human factor) facilitates information processing and how it aids marketing strategy development (marketing dimension).

Lukas, Whitwell and Heide (2013) have explained how customer orientation provides a mechanism for restraining possible overshooting as it allows the company to identify a specific need to be satisfied. This brings to attention the capability of the employee(s) (human factor), an individual's immersion in a group (marketing department) and the behaviour of the group (human factor) that the individual belongs to. By devising and implementing a marketing strategy (marketing dimension), marketing managers have the opportunity to raise the profile of marketing staff (Drechsler, Natter & Leeflang, 2013) and thus ensure the marketing department plays a prominent role within the organization. The work of Moon, Miller and Kim (2013) is considered informative from the perspective of raising the profile of marketing staff because it makes the case that more work needs to be done in the area of

1
2
3 design innovation in marketing and especially relationship building that governs design
4 innovation. The work of Friesl (2012) focuses on knowledge acquisition and the link with
5 company performance builds on the work of Gonzalez-Padron, Chabowski, Hult and Ketchen
6 (2010). Lukas, Whitwell, and Heide (2013) point out that the organization's value framework
7 determine the company's focus and they indicate how staff within the company can formulate
8 marketing policy that meets customer expectations. The organization's value framework also
9 shapes relationships governing new product development capabilities and new product
10 development performance (Yoo & Frankwick, 2012). De Brentani and Kleinschmidt (2004)
11 point out that senior managers need to devise appropriate organizational cultural value systems
12 and remain committed to new product development. In addition, managers need to be open-
13 minded as adaptability is a continuous construct (Tuominen, Rajala & Moller, 2004) and this
14 suggests that in the case of international joint ventures/acquisitions (Anh, Baughn & Neupert,
15 2006), the information communication process is influenced by cultural value systems,
16 which are themselves the outcome of group behaviour (human factor) and organizational
17 learning (human factor). Bearing the above points in mind, a conceptual framework has been
18 devised from the extant literature and appears in Figure 1.

46

47 What has to be remembered about the constructs and the linkages represented
48 in Figure 1, is that an organization's cultural value system determines how staff within an
49 organization interact with each other and with those external to the organization.
50 Communication plays a key role in establishing the way in which various forms of interaction
51 manifest, and group behaviour determines how people are influenced by and in turn influence
52
53
54
55
56
57
58
59
60

1
2
3 the organization's value system. In addition, group behaviour directly influences the
4
5 organizational learning model that is in place and through teamwork, staff in the marketing
6
7 department devise and implement marketing strategy, an outcome of which is the
8
9 organization's customer service policy. This said, we considered it useful to build on the
10
11 work undertaken to date and to provide insights into how, in an collectivist culture, the
12
13 organizational learning process is linked with marketing strategy, and to explain how
14
15 managers in a chaebol prioritize matters and build a relationship with the organization's
16
17 customers through managing change in a pro-active manner. This we feel is a contribution to
18
19 the body of existing knowledge relating to marketing strategy formulation and
20
21 implementation, because it provides insights into how a set of attributes relating to marketing
22
23 strategy development can be categorized and how these attributes reinforce communication
24
25 and group behaviour so that the organization achieves its objectives.
26
27
28
29
30

31 This paper explains how the organizational learning concept is used to promote
32
33 group work, information sharing and an open and transparent communication style in order to
34
35 produce a high level of customer service (Lee & Trim, 2014). Our research addresses two
36
37 questions: (1) how do marketing staff in a chaebol utilize information in order to influence
38
39 group behaviour? (2) How can the organizational learning concept be used to increase
40
41 marketing knowledge in order to produce a high level of customer service? The study
42
43 contributes to marketing knowledge by increasing our understanding of how organizational
44
45 learning is used by marketing managers to support the marketing strategy decision-making
46
47 process within a collectivist organizational culture. We add to current knowledge by focusing
48
49 our effort on how the learning concept in an organization with a collectivist culture produces a
50
51 high level of customer service. We build on the work undertaken by Ellemers, Sleebos, Stam
52
53 and de Gilder (2013) relating to how an individual is perceived and fits into a group and we
54
55 extend this to take into account how an individual is absorbed into an organizational cultural
56
57
58
59
60

1
2
3 value system. We resonate with the work of Jarratt and Stiles (2010) who draw attention to
4
5 “cultural embedded strategizing practice” and hope that the research findings will help stimulate
6
7 interdisciplinary work in the area of management and marketing that will result in the
8
9 development of knowledge as advocated by Yadav (2010).
10

11 12 13 14 **2. Methodology**

15 16 ***2.1 Research Methods***

17
18 With respect to the research strategy deployed, previously collected primary data from in-
19
20 depth personal interviews with three senior managers based at a Korean electronics company
21
22 in the UK was used as it was in the form of transcripts and had not been previously subjected
23
24 to the grounded theory analytical process. Each manager had been employed by the company
25
26 for over 10 years and had an extensive knowledge of the company’s global marketing
27
28 operations and the collectivist organizational culture that underpinned the decision-making
29
30 process. The in-depth personal interview method had been used as it allowed the person
31
32 conducting the interviews to probe in-depth (Patton, 1990), enter into discussion and gain
33
34 further insights into the complex subject matter (Seidman, 1991).
35
36
37

38
39 Easterby-Smith and Thorpe (1997) suggest that qualitative research approaches are
40
41 known to yield insights into management learning, hence the research strategy adopted allowed
42
43 the respondents “to make knowledge claims” about how they interpreted reality, and the
44
45 researcher was able to “engage in ongoing self-reflection” and pursue “an extensive and
46
47 ongoing commitment to a line of theoretical research” (Suddaby, 2006, p.640). Each
48
49 interview had been conducted in English, however, the researcher undertaking the data
50
51 collection was fluent in Korean and did on occasion speak Korean to clarify matters.
52
53

54
55 The reason why previously collected data were analyzed and interpreted was because
56
57 the research addressed the phenomenon known as strategic action (Ferlie & McNulty, 1997).
58
59
60

1
2
3 The previous study had addressed the topic of relationship building in the context of a
4 partnership arrangement and had incorporated customer service and national cultural values.
5
6
7 It was considered logical, therefore, to take the work a step further and establish how the
8 attributes relating to marketing strategy deployment were related to a specific chaebol's
9 organizational learning model. The three senior managers had in fact given their permission
10 for the data to be analyzed so that insights could be gained into how a high level of customer
11 service was produced. By analyzing and interpreting the data in the way that we did, we were
12 able to identify themes such as organizational learning and customer service, and relate these
13 themes back to relevant literature. The reason why the grounded theory technique was
14 deployed was so that additional value could be derived from the existing data. One of the
15 advantages of this was that the concepts derived from the primary data were compared with
16 the theoretical ideas/concepts contained in relevant literature, which is representative of the
17 inductive theory-generating research (Orton, 1997). We used the "paradigm model" put
18 forward by Strauss and Corbin (1990) to relate themes, variables/concepts and to identify the
19 pattern of relationships. One of the benefits of this paradigm model is that it allows
20 researchers to think systematically about establishing causal conditions, and thus provides a
21 basis for understanding how a set of relationships are linked. Suddaby (2006) is supportive of
22 this approach and points out that when using the grounded theory approach, researchers need
23 to be as transparent as possible about the methodological approach itself. A strength of the
24 inductive research approach is that it allows researchers to add density and precision, and we
25 recognized that our research approach provided an in-depth appreciation of how managers in
26 a chaebol use the organizational learning concept in a culturally rich and environmentally
27 specific context. The characteristics identified would enable us to better understand how
28 senior marketing managers in a chaebol embrace the organizational learning concept in order
29 to develop and implement a distinctive marketing strategy that incorporated customer service.

1
2
3 With respect to the methodological approach adopted, it is important to bear in mind
4 that the researchers were sympathetic to the view that the value of applied research is that it
5 allows a researcher to develop their knowledge in relation to learning under specific
6 conditions (Crossan, Maurer & White, 2011). In addition, we considered it worthwhile to
7 look more deeply at practical and operational issues (Sinkovics & Penz, 2011) because by
8 doing so, we would be able to increase our understanding of the cultural context within which
9 the research took place.

20 **3. Analysis of Data and Findings**

21
22 The grounded theory derived from the research is presented in Table 1. From Table 1, it can
23 be deduced that senior managers employed by the chaebol embrace continual communication
24 from the stance that “learning” is important but needs to be placed in a certain framework in
25 order that account can be taken of the “Situational condition(s)” confronting the organization
26 and in addition, give rise to a solution, which is termed “The means”. The emphasis is for the
27 organization to improve its capability through staff sharing information, developing
28 knowledge and utilizing skills. Potentially, this has political implications and senior managers
29 need to understand how they are going to deploy the “Tools” to achieve the objectives set by
30 satisfying two different audiences (the state and the organization’s customers).
31
32
33
34
35
36
37
38
39
40
41
42

43 It is clear that staff are expected to share information, however, it has to be
44 remembered that there is risk associated with this. Managers need, therefore, to be aware of
45 the level of ‘trust’ that exists as building ‘trust’ based relationships takes time. One way in
46 which Korean companies nurture trust based relationships is by recruiting via tried and tested
47 means (*Gong-che* and *Yon-go*). As well as the ability of an individual being deemed
48 important, so too are ‘family-ties’, which relate to networking and ‘face’ of the family. This
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 is because the family's reputation in the community carries weight and an individual's loyalty
4
5 to the organization is paramount.
6
7
8

9
10 INSERT TABLE 1 HERE
11
12

13
14
15 With reference to a "High level of customer service" outlined in Figure 1,
16
17 Respondent one provided some useful insights:
18
19

20
21 "....customers are viewed very broadly by the company's staff and if the senior
22
23 product manager comes to me in the marketing department he is my customer. I
24
25 will give him every assistance that I can retailers and distributors in the area
26
27 are also costumers and require different information than the end user/customer.....
28
29 we do have a high level of awareness of the requirements and information
30
31 needed. The MD reads all the letters of complaint that are addressed to him, and
32
33 he sees all of the replies..... If we felt something is causing a customer problems,
34
35 then we will act very quickly and speak to our colleagues immediately."
36
37
38
39

40
41
42 The process of continual communication involves connecting to various but
43
44 relevant channels and people and is the main component of the interactional strategies.
45
46 The "Corollary" can be placed in the context of improving the organization's capabilities
47
48 through information sharing in order to produce products that meet customer expectations
49
50 and involves knowledge and skill development. Evidence for this comes from a senior
51
52 manager known as Respondent two, who stated:
53
54
55
56
57
58
59
60

1
2
3 “... as we do share more and communicate with them, you can make better
4
5 decisions because you can make the decisions based on more information.”
6
7

8
9
10 It can be noted that the “Tools” (cultural influence and relationship management)
11
12 are associated with the way in which information is disseminated and the impact it has
13
14 on how the organization’s marketing strategy is shaped and how a learning plan is
15
16 incorporated, and manifests in how the company deploys its corporate strategy and
17
18 enhances its brand name. For example, another senior manager, Respondent three stated:
19

20
21
22
23 “Compliance with regulation is important but there are better avenues [people] to
24
25 get feedback from such as the local standards trading office ... and if they have a
26
27 problem they can come to me or us to resolve the customer’s problem ... product
28
29 improvement .. to get feedback on whether or not we have any product issues on a
30
31 particular product through customer feedback not only through a formal
32
33 way... ”.
34
35

36
37
38 Respondent three continued:
39

40
41
42
43 “our aim is to promote ourselves to the trade first, we are going to promote
44
45 ourselves to the consumer...make sure the trader is comfortable with us ... and
46
47 what we stand for then move to the consumer and do exactly the same thing...
48
49 Make them more aware, ... high quality products if you want the best product ...
50
51 giving good value for money”.
52
53
54
55
56
57
58
59
60

1
2
3 It can be argued that cultural influence (Tools) deployed in the chaebol is a stimulus
4 and encourages individual members of staff to set high goal(s) of achievement that are
5 consistent with the organization's goals and result in individual members of staff interacting
6 with other members of staff through group work. "Corollary" can be viewed as a facilitator
7 as it provides guidance vis-à-vis staff learning activities and performance measures, and it
8 encourages fore-sight. This outcome is supported by the work of Lee and Trim (2013) who
9 explain how a collectivist culture underpins the marketing strategy process. For example, in
10 order to motivate staff to share information, staff need to be aware of the importance
11 associated with meeting local regulations and ensuring that customers are comfortable with
12 the company's way of doing business/its image. This means that a formal and structured
13 reporting system needs to be in place.
14
15
16
17
18
19
20
21
22
23
24
25
26
27
28
29

30 Through the process of "Organizational learning" as depicted in Figure 1, open
31 communication and information sharing will improve customer service continually. Evidence
32 of this comes from Respondent three who commented:
33
34
35
36
37
38

39 "We talk to them, everyone, ... our director with end users or in my case a lot of
40 time with our competitors,... go to industry meetings..... friends who work for
41 other companies and say, we are looking for your products X and Y that is
42 how we get feedback.... if they [customers] are not happy with our delivery, ...
43 they were quick to tell us, ..., because they have a choice of where they can buy
44 from,... if we know what the problem is, then we are in a position to act on it and
45 we can take steps to fix it."
46
47
48
49
50
51
52
53
54
55

56 Another senior manager, Respondent two, added:
57
58
59
60

1
2
3
4
5 “... I think, if you have a common culture with your partners, you can say that
6
7 you can communicate with them very well. This means that they know each
8
9 other’s changes, so they can respond to the changes accordingly and quickly.”
10
11

12
13
14 This outcome supports the work of Harvey and Denton (1999), Schepers, Falk, de
15
16 Ruyter, de Jong and Hammerschmidt (2012) and Lukas, Whitwell, and Heide (2013). It can
17
18 be observed from the quotations that there are two issues. First, how to relate quality and
19
20 price in order to provide a better service to customers. This is done by delivering an
21
22 acceptable product (level of technology) at an appropriate price. Second, the attitude of staff
23
24 towards sharing relevant/necessary information and the type of interaction involved. As
25
26 regards the interaction of staff, it can be understood that “culture” encourages staff to engage
27
28 in ‘open communication’ that is directly focused on ‘problem-solving’ and individuals taking
29
30 responsibility for certain actions. The process of maintaining trust based relationships is
31
32 reinforced by the fact that an individual safeguards their own “face”. An open communication
33
34 style also enables staff in other functions/units/partner organizations to be involved in solving
35
36 customer related problems and helps them to devise initiatives to improve products/services
37
38 on an ongoing basis.
39
40
41
42

43 In order to maintain and increase the organization’s reputation, capability and
44
45 reliability, staff are committed to the concept of ‘continual improvement’. This resonates at
46
47 the subconscious level and facilitates open communication that results in the evaluation of the
48
49 firm’s product/service. The management procedures in place ensure that other
50
51 functions/units/partner organizations do the same. To understand how people from a
52
53 collectivist culture such as Korea undertake evaluations and maintain/save ‘face’, it is
54
55 necessary to place the concept within a social status context. Kim and Nam (1998, p.529)
56
57
58
59
60

1
2
3 suggest that Asian managers think in terms of “source, motive, goal, processes, and
4
5 consequences”. The concept of face is rooted in Confucian thought and is typical of a
6
7 collectivist culture, and can be better appreciated by studying the vertical and horizontal
8
9 relationships among groups of people. Face requires that people control their emotions and
10
11 their attitudes, and maintain harmony with colleagues and customers. This can also be
12
13 translated into respecting customers and has implications regarding forming and maintaining
14
15 long-term relationships. Essentially, the key point is whether somebody “fits-in” as opposed
16
17 to “stands-out” within a group (Brown & Levinson, 1987). Hence managers employed by a
18
19 cheabol are able to take a balanced view of what the customer needs and thus avoid what is
20
21 known as overshooting (Lukas, Whitewell & Heide, 2013). For example, Respondent three
22
23 intimated:
24
25
26
27
28

29 “I think, we are very confident with the level of our staff, staff working with
30
31 customer information.... if you offer an overall service ... it is important to think
32
33 in terms of maximising profit, so it is important to get the best possible price
34
35 and have as few problems afterwards as possible”.
36
37
38
39

40 It is interesting to note that when one relates the attributes of “continual
41
42 communication” (Corollary) with “cultural influence and relationship management” (Tools),
43
44 social interaction plays an important role and allows an organization to produce a marketing
45
46 strategy that results in the company being different from its competitors.
47
48

49 It has often been observed that Korean staff are hard working and committed to the
50
51 organization (Ungson, Steers & Park, 1997; Lee, 1998-1999); and this can be interpreted as
52
53 Korean people being highly elitist and pragmatic, yet being socialized into the organization’s
54
55 fabric (Steers, Shin & Ungson, 1989; Kim & Nam, 1998). Socialization has a two fold
56
57
58
59
60

1
2
3 purpose: first, it is to make an individual aware of the views of their peers and also their line
4
5 (senior) manager(s). 'Losing face' (either one's own or the group's) may have unforeseen
6
7 consequences. The 'sense of losing face' does not simply relate to maintaining the
8
9 equilibrium associated with group harmony, but needs to be placed in a reciprocal, relational
10
11 context (Ho, 1976; Kim & Nam, 1998). Second, it is to ensure that Korean people try to find
12
13 their place in a social hierarchy by fostering harmonious and interdependent relationships
14
15 with their group members. Acceptance is based on specific subject knowledge and
16
17 diplomatic/management skill that is viewed as important as it allows an individual to progress
18
19 through the organization's hierarchy.
20
21

22
23 As regards "Group behaviour" as depicted in Figure 1, in relation to marketing
24
25 strategy, Respondent two stated:
26
27

28
29 "Each department/group(s) is empowered to pass on knowledge relating to value
30
31 creation and this means that the middle management group share their
32
33 viewpoint/cultural value system with their junior management group".
34
35
36
37

38
39 This is evidence that it is the middle managers who determine the level of autonomy
40
41 and create and develop an appropriate learning environment in which junior staff relate to the
42
43 values of the organization and become immersed in the organizational value system
44
45 (O'Leary, Mortensen & Woolley, 2011). By middle managers adopting a flexible approach,
46
47 staff are stimulated to develop original ideas/views that are aimed at solving complex
48
49 problems of a multi-faceted nature (Goffin & Koners, 2011; Sivasubramaniam, Liebowitz &
50
51 Lackman 2012). In the case of the company that participated in the research outlined in this
52
53 paper, middle managers interpret, direct and explain what government is attempting to
54
55 achieve and how this will benefit the company and its employees. Through the process of
56
57
58
59
60

1
2
3 fostering close interaction among staff, people will be motivated and will want to be
4 associated with the main or ingroup. Being a member of the ingroup has psychological value
5 and will incentivize people and encourage them to share information in order to achieve
6 better performance. For example, Respondent three was firm in their view about the process
7 of fostering interaction:
8
9
10
11
12

13
14
15
16 “...to generate enthusiasm among staff requires making them feel more an integral
17 part of the company, because there are big competitors out there and getting them
18 [staff] involved in the business process means people will look at other people in
19 the company and will look at me, and look at the other marketing people and will
20 see that their perception of what I do is important..”
21
22
23
24
25
26
27
28

29
30 Also, another senior manager, Respondent two, reiterated this view by stating: “If
31 we do not work together, it is difficult to lead this organization”. We can deduce that
32 middle managers need to play a proactive role vis-à-vis solving complex marketing
33 problems because of the level of complexity and uncertainty that exists. Within the
34 context of improving performance, the work-group assumes the role of the performance
35 evaluator (social legitimacy) and if an individual does not or cannot meet the expectations
36 of the group, then the individual/group may lose face (Ouchi, 1980). This suggests that
37 ‘face’ has two facets: first, it is associated with sharing collected information; and second,
38 the process of acquiring skills is viewed as building organizational capability. Please note
39 in Figure 1, the role of the group is influential with regards to marketing strategy
40 implementation, which results in a high level of customer service.
41
42
43
44
45
46
47
48
49
50
51
52
53

54 By an individual strengthening their capability (skill base), they are perceived as
55 being flexible and trustworthy. For example, Respondent two stated: “When a person
56
57
58
59
60

1
2
3 needs a specific type of training then the person and his/her senior manager discuss the
4
5 issue and decide what is appropriate.” The same manager also stipulated: “Where
6
7 necessary, we also link with local universities for special needs, and that means specific
8
9 training”. This is viewed positively because specific training is to support and build an
10
11 individual’s skill level and capability. This commitment to staff development is essential
12
13 with respect to reinforcing the fact that the organization is customer focused. Interaction
14
15 among and between staff members is encouraged so that information sharing occurs and
16
17 the group is able to achieve the targets set (Janelli, 1993). On reflection, it can be argued
18
19 that ‘group belongingness’ is associated with increasing ‘face’ within a group, and results
20
21 in creating ‘opportunities’ to enhance an individual’s skill and knowledge base.
22
23

24
25 With regards to the “Organizational value system” as depicted in Figure 1, it can
26
27 be suggested this is viewed in relation to enhancing customer service through trustworthy
28
29 behaviour. For example, Respondent two stated:
30
31

32
33
34 “Staff have the manual from HQ relating to marketing, even the logo is defined,
35
36 what is the logo’s meaning results in a consistent approach because there is a need
37
38 to be consistent on a global basis. How to implement marketing strategy ... each
39
40 managing director .. can apply their own creativity and have their own action plan
41
42 based on their own idea, ... but basically the company has only one strategy.”
43
44
45

46
47 Furthermore, Respondent two added:

48
49 “.. our agencies, although our marketing managers and staff do control the various
50
51 agencies, produce feedback to satisfy our demands and/or requirements ... the
52
53 agencies and their professionals, help us to define the quality”.
54
55
56
57
58
59
60

1
2
3 By allowing senior managers to have flexibility and draw up their own action plans,
4
5 staff feel that their work is valued and therefore develop an emotional commitment to the
6
7 organization. This means that when staff engage with external organizations - which form an
8
9 integral part of the operational element of the organization - they identify, more consciously,
10
11 with individuals they consider to be reliable and who have appropriate skills and knowledge.
12
13 The key being to build relationships with individuals that are prepared to share information
14
15 that results in mutual benefit. For example, data and information is generated through various
16
17 organizations (e.g., consumer associations, specialist industry consultants, and market
18
19 research companies) and is made available to staff in partner organizations in order that the
20
21 marketing strategy and overall reputation of the organization are enhanced.
22
23
24

25 It appears that managers reflect on the benefit of 'learning' from different types of
26
27 information source and this encourages individual staff to collaborate and be part of a cross-
28
29 functional team and contribute to the development of the organization's memory. In the case
30
31 of relationship building with overseas organizations, it is likely that a formal contract is
32
33 entered into in order to prevent individualistic or opportunistic behaviour. Respondent two
34
35 provided some useful insights into this:
36
37
38
39
40

41 "Formal contracts are necessary if the implementation of market-oriented
42
43 concept known as reducing opportunistic behaviour and sharing information for
44
45 the benefit of the group/company are to dominate and be seen as relevantthe
46
47 sharing of information is a key issue. As regards communication, as I have
48
49 always stressed, two things in business are most important, one is
50
51 communication and the other is trust about the service which the organization
52
53 provides so sharing information about the market and the concept of
54
55 customer orientation is very important....customer satisfaction and cost
56
57
58
59
60

1
2
3 effectiveness need to be interpreted from the range of products and it is
4
5 unavoidable to link customer satisfaction to the company's budget/cost..... you
6
7 have to have trustworthy relationships, so then you can build loyalty".
8
9

10
11 It is through the process of developing trustworthy behaviour that a pro-active
12 approach materializes and results in new product development being placed within a holistic
13 programme of managing change (Salomo, Kleinschmidt & de Brentani, 2010). In the case of
14 the company that participated in the research, it is evident that the organizational cultural
15 value system gave rise to a distinct marketing strategy that is underpinned by managers being
16 committed to sharing knowledge, experience and wisdom with staff lower down the
17 organizational hierarchy. The strategic marketing approach was adopted and placed much
18 emphasis on staff collecting market intelligence and identifying company-product-market fit
19 requirements. The distinct marketing strategy developed is reinforced by the organization's
20 dominant logic as business relationships are internally and externally orchestrated (Yamin &
21 Andersson, 2011, pp.152-154). Communication is, therefore, to be viewed from the
22 perspective of skill set enhancement, the objective of which is to enable employees to ask the
23 right questions and find unique solutions to solving problems relating to operational issues. In
24 precise terms, by encouraging information sharing it is possible to improve social integration
25 within and between organizations and ultimately, improve organizational performance and
26 competitive standing within the industry. It is useful to remember that knowledge sharing,
27 training and development, and learning from experience (Friesl, 2012, p.334) are all
28 associated with internal learning, however, in order to fully understand what learning
29 involves, it is necessary to take into account collaborative learning and market-based learning
30 as well (Friesl, 2012, p.339). Bearing in mind the above, Figure 1 has been extended and
31 modified. Please consult Figure 2.

INSERT FIGURE 2 HERE

4 Environmental characteristics, attributes of Korean companies, and propositions development

There is a developing literature relating to how Korean companies are managed, and a summary of relevant environmental characteristics and company attributes appear in Table 2. As can be noted from Table 2, marketing managers in Korean companies are focused on the operating environment and this requires that they identify what data and information is needed in order to enhance the marketing strategy formulation process within the organization. It can also be noted that managers in Korean companies are aware of the interplay between the marketing dimension (please see the “External environment” in Table 2 and “Marketing strategy” and “High level of customer service” in Figure 2) and the human factor dimension (capability of the employee(s) as determined by their behaviour) (please see the “Internal environment” in Table 2 and “Group behaviour” in Figure 2), and this has been taken into account when creating the profile outlined in Table 2.

INSERT TABLE 2 HERE

Reflecting on the above, Table 1 indicates how marketing managers in the Korean electronics company under investigation develop marketing strategies that are culturally bound and which are underpinned by the organizational learning concept. The chaebol’s organizational learning model is made explicit and allows us to identify how the “Tools”

1
2
3 (defined as cultural influence and relationship management) form the intervening conditions;
4
5 and how the “Corollary” (defined as continual communication) form the action/interactional
6
7 strategies.
8

9
10 From the analysis and interpretation, it can be deduced that managers employed by the
11
12 Korean chaebol that participated in the study embrace the concept of organizational learning and
13
14 they adjust and apply it in order to ensure that harmony exists. Traditional Korean cultural values
15
16 evident in society, permeated the organization’s value system. Bearing this in mind, the research
17
18 outcome visualises how managers in chaebols adapt and guide the process of organizational
19
20 learning in a culturally and environmentally specific context. The attributes identified in Table 1
21
22 are derived from the analysis and interpretation of the primary data. When we analysed the data
23
24 we also reflected on the material from the literature review outlined in Table 2. This allowed us
25
26 to identify and define the categories and variables. By applying the “paradigm model” that we
27
28 did, we established a pattern of how senior marketing managers in the Korean company devised
29
30 a marketing strategy. Table 1 outlines clearly what is meant by the term “organizational
31
32 learning” and how the concept was deployed by staff in the company (please consult the column
33
34 denoted Chaebol’s organizational learning model), which can be considered multi-layered and
35
36 hierarchical but tightly inter-connected and executed distinctively (as is evidenced by the column
37
38 entitled: “Attributes relating to strategy deployment”).
39
40
41
42

43 With respect to causal conditions in Table 1, we refer to a target of economic growth
44
45 specified in a certain time period, set out by the state and underpinned by industry specific
46
47 policies. We referred to this as the ‘situational condition’. This can be deemed valid as managers
48
49 based in South Korea relate the objectives of the company to those of the government (see Table
50
51 2)(Song, 1992; Ungson, Steers & Park, 1997; Jeong, 1999; Kim & Yi, 1998-1999; Shin, 1998-
52
53 1999; Lee & Trim, 2012).
54
55
56
57
58
59
60

1
2
3 As regards the phenomenon, in Table 1, we refer to the ‘ethos of the firm’ as managers
4
5 increase the reputation of the company through achieving targeted growth in line with
6
7 government objectives, and it is evident that customer service is pivotal as regards ensuring that
8
9 the needs of customers are met. Hence, managers are required to identify skilled and
10
11 knowledgeable staff, and identify with government economic growth targets. This has serious
12
13 implications for companies in South Korea as the government controls bank accounts as well as
14
15 special schemes for specifically defined industry and company performance (please see the
16
17 “Leadership” domain in Table 2) (Chen, 1995; Ungson, Steers & Park, 1997; Kim & Yi, 1998-
18
19 1999).

20
21
22 The context, is referred to as “The means” in Table 1 as it relates to how an
23
24 organization achieves its ethos, which is based on monitoring activities to improve
25
26 organizational capability through sharing information and enhancing the level of knowledge
27
28 and skills through recruitment activities. Managers in Korean companies are aware that they
29
30 need to identify key government representative(s) and to link the company’s strategic focus
31
32 with industry policy, and remain flexible in order to build organizational capability (please
33
34 see “Role of manager”; “Control”; “Influence of the national cultural value system on the
35
36 organization’s value system” in Table 2)(Kim & Yi, 1998-1999; Lee, 1998-1999; Shin,
37
38 1998-1999; Jeong, 1999; Lee & Trim, 2013).

39
40
41 Turning next to intervening conditions in Table 1, we relate this aspect to cultural
42
43 influence (Confucian thought), and how managers in a chaebol establish their organization’s
44
45 ethos and devise and implement management practices. Therefore, we regard culture as a ‘Tool’
46
47 for the process of recruiting new members of staff (via *Yon-go* and *Gong-che*). This approach to
48
49 recruitment promotes a sense of “family” culture within the company. One of the key
50
51 characteristics of chaebols is that they are controlled by family ties and this has implications with
52
53 respect to managing day-to-day operations. In order to achieve the strategic objectives,
54
55
56
57
58
59
60

1
2
3 individual members of staff need to be viewed as trustworthy and flexible (Lee, 1998-1999;
4 Whang, 1998-1999; Jeong, 1999; Lee, 2010). This translates into an employee being capable of
5 completing a task(s) within a specific time frame and at the required/anticipated quality. This has
6 implications as regards how the process of learning is managed within the organization as it
7 places individual learning within an institutional context.
8
9

10
11
12
13
14 The action/interactional strategies in Table 1 are interpreted in the context of
15 'Corollary' as it relates directly to managing the process of improving the organization's
16 capability to achieve the ethos of the firm. This is so that it meets the objectives set and the
17 country achieves the growth target(s) set by the state. In the process, customer needs are met
18 and a balance is achieved between price and quality (eg., the level of technology embedded in
19 the product offering for example).
20
21
22
23
24
25
26

27
28 During the management process, it is interesting to note how "continual
29 communication" manifests. In order that communication is continual, and is viewed as
30 productive within a chaebol, it is necessary for two conditions to be satisfied: one relates to
31 the place where the individual concerned studied (e.g. university), and which is highly
32 influential with respect to shaping perceptions regarding an individual's skill base and
33 knowledge; and another aspect is whether the individual has the right political connection(s)
34 within the chaebol as well as the state (Lee, 2010) to be able to network effectively.
35
36
37
38
39
40
41
42

43 Because marketers need to align customer focus with customer satisfaction (Harvey &
44 Denton, 1999), marketing managers need to understand how the company rewards individual
45 and team performance (Faure, 2009). This is due to the fact that both the staff behaviour
46 dimension (human factor) and the marketing dimension are linked. By encouraging employees
47 to use their discretion and take the initiative when interacting with customers, customer
48 stewardship control will result that goes beyond the traditional customer orientation approach
49 (Schepers, Falk, de Ruyter, de Jong & Hammerschmidt, 2012). The main benefit of the
50
51
52
53
54
55
56
57
58
59
60

1
2
3 customer stewardship control approach is that it highlights how marketers, as decision
4 makers and/or facilitators, motivate staff to share information among their colleagues in
5 order to maintain the organization's reputation (Lee and Trim, 2013). From the above, it is
6 evident that senior managers in the Korean chaebol identify individuals both internal to the
7 organization and external to the organization that they have trust in to build long-term
8 working relationships with. From the research undertaken, we argue that the 'Tools' can be
9 utilized to improve an organization's capability and increase opportunities associated with
10 information sharing, and knowledge and skill development. For instance, in order that staff
11 deliver what is required of them, they need to be proactive when searching for information to
12 resolve identified problems. Trustworthiness and loyalty (*shin*) are important cultural
13 characteristics. An additional point that needs attention is the relationship between the
14 'Tools' and 'Corollary' as the nature of interactions among staff, and staff and managers can
15 be viewed from the perspective of sub-group interaction, which is formal and informal.

Employers have an expectation of what an individual will bring with them in terms of the right/desired knowledge, skills and network, collectively known as 'Migratory Knowledge,' or will contribute in the way of shaping and implementing different types of marketing strategy. This ultimately results in several possible 'Outputs' as is evidenced in Table 1. New members of staff are recruited and immersed in the organization's cultural value system, *Shin (trust, loyal) and Suh (order)*, and because of this the culturally embedded group norms directly influence how the team achieves the group targets set. By achieving the targets set, the individual team members are viewed as being loyal to their manager(s) (Ungson, Steers & Park, 1997; Lee, 1998-1999). Loyalty in terms of group and sub-group association, is measured from the stance of quality of interaction and staff are rewarded through career progression.

1
2
3 By reflecting on these points, it is possible to revisit the work of De Brentani and
4 Kleinschmidt (2004) regarding how marketing managers establish an appropriate
5 organizational cultural value system and how they foster innovativeness (Yoo & Frankwick,
6 2012) and thus identify ways in which to improve upon the level of customer service provided.
7 Bearing these points in mind, we cite two propositions.
8
9
10
11
12

13
14
15
16 **Proposition 1:** If senior management provide guidance as to how data and information is
17 collected from the external environment and how the findings are used in the
18 marketing strategy process, the interaction of in-house company personnel
19 will be improved and this will enhance the marketing decision-making
20 process.
21
22
23
24
25
26

27 **Proposition 2:** If marketing managers engage in open communication in order to motivate
28 staff and share information with managers in other business units, then
29 customer service will be continually improved.
30
31
32
33
34
35

36 Regarding group and intergroup relations, minority positions and dominant positions,
37 and information processing, it is necessary to think in terms of power, and assertive and
38 defensive group behaviour, if that is group dynamics are to be understood (Simon, Aufderheide
39 & Kampmeier, 2004). The role of power is, we feel, important because it provides insights into
40 how multiple team membership influences individual learning, team learning, and ultimately
41 productivity (O'Leary, Mortensen & Woolley, 2011). Goffin and Koners (2011) indicate that
42 learning occurs at various levels such as the individual level, the project team level and the
43 project-to-project level, and a combination of all these levels. This links directly with how
44 knowledge is developed within an extended organizational context; and how learning activities
45 are used to assist the process of information sharing. Group performance needs to take into
46
47

1
2
3 account how leadership of a team is measured against team tenure and functional diversity
4 (Sivasubramaniam, Liebowitz & Lackman, 2012). In addition, it is relevant, we feel, to reflect
5 on such issues as an individual's inclusion into a group and also a team's identity (Ellemers,
6 Sleebos, Stam & de Gilder, 2013). Loyalty is perceived as an important quality in Korean
7 society and it relates to the trustworthiness of an individual (Song, 1992; Lee, 1998-1999). In
8 return for being loyal, a member of staff expects their manager(s) to protect/support them and
9 this is related to well being and is grounded in the concept of 'mutuality'. However, one
10 interesting point to note is that according to Tu Wei-ming (cited in Ungson, Steers and Park,
11 1997), Confucianism not only emphasises 'obedience' to government, but can be more
12 widely interpreted as 'accountability' of government. Therefore, the concept of 'mutuality'
13 encompasses relationship building with an emphasis on 'faithfulness', 'loyalty'; and the role
14 that a subordinate plays. Therefore managers need to be seen as fair, adaptable to a situation
15 and able to manage capable staff (Outputs 2 and 3 in Table 1). The concept of mutuality
16 stems from Confucian thought and is known to contribute to the emergence of new South
17 Korean business models, which embrace diversity in order to acquire the necessary skills to
18 be flexible and adaptable (Lee, 2010).

60

When a collectivist identity is evident, individuals may both support and represent this identity (Worchel & Coutant, 2004), however, creative tension will arise from time to time, and managers need to exercise perseverance and patience (Senge, 1999). Because marketers work with multiple teams on complex products/problems they will need to take note of how group identity and interdependency shape a team's development (Glynn, Kazanjian & Drazin, 2010). In terms of managing tension and performance, it should be noted that an individual's performance may in some way be related to their risk perception (McNally, Durmusoglu & Calantone, 2013); and also, be linked with the amount of autonomy a team/function has.

1
2
3 It is useful to note the contribution to the body of knowledge made by Ellemers,
4
5 Sleebos, Stam and de Gilder (2013), and to make reference to Edmondson and Nembhard (2009,
6
7 pp.125-126) who claim that struggling with challenges such as cross-functionality and conflict,
8
9 enables team members to build capabilities for learning which facilitates collaboration, as cross-
10
11 functional teams are viewed as providing “greater access to more and different types of
12
13 information”.

14
15
16 In a collectivist culture, team cohesiveness and team building, and maintaining
17
18 trustworthy relationships, are the concerns of senior management. Lee (2004) suggests that trust
19
20 is influential vis-à-vis facilitating the relationship building process and developing boundary-
21
22 spanning skills. Members of a group identify appropriate individuals outside of their team who
23
24 can provide information that can be acted upon to help the group. This we would argue is a
25
26 natural process in a collectivist culture, where each group is perceived as being an integral part
27
28 of a larger group. It is possible to suggest that the collectivist approach to learning has given rise
29
30 to what is generally known as organizational memory, which is: “all the knowledge that a firm
31
32 gathers. This knowledge requires proper storage and availability to all the individuals to
33
34 facilitate its retrieval as necessary” (Santos-Vijande, Lopez-Sanchez & Trespalacios, 2012,
35
36 p.1081). This is a critical aspect to an organization that is intent on developing a new product as
37
38 the organization’s collective knowledge will facilitate the process of defining and redefining a
39
40 product’s target market (Salomo, Kleinschmidt & de Brentani, 2010). We propose two
41
42 additional propositions.
43
44
45
46
47
48

49
50 **Proposition 3:** The tendency and degree of information sharing among marketing staff will
51
52 be influenced by the sense of belongingness an individual has to a
53
54 team/group.
55
56
57
58
59
60

1
2
3 **Proposition 4:** By developing emotional commitment, trustworthy behaviour will result
4
5 that enhances the organization's reputation.
6
7
8
9

10 **6. Conclusion**

11
12 Reflecting on the first question posed in this exploratory study, it can be deduced that
13
14 marketing staff in the chaebol are engaged in a continuous process of acquiring and utilizing
15
16 knowledge through their various relationships (e.g. with other staff and customers) and
17
18 demonstrate their loyalty and commitment to the group/organization. In return, they are
19
20 accepted by their peers and the organization. The relevant work experience gained by staff is
21
22 deemed of value to the company as it facilitates the process of organizational learning. As
23
24 regards the second research question, it can be argued that the marketing decision-making
25
26 process itself is flexible and multi-layered, and needs to be viewed as pragmatic as the
27
28 customer service policy is placed within a situational context. Hence marketing staff need to
29
30 be open to a range of inputs (and influences) from different sources (internal and external to
31
32 the organization).
33
34
35
36

37 We believe that the research outlined in this paper has provided useful insights into
38
39 how information sharing can contribute to knowledge creation in an organization with a
40
41 collectivist culture. Knowledge creation does, we feel, increase an organization's
42
43 commitment to developing an innovative organizational culture that facilitates
44
45 experimentation, which results in new alternative strategies being put forward (Wei, O'Neill,
46
47 Lee & Zhou, 2012). We consider there is value in what Okhuysen and Bonardi (2011, p.7)
48
49 claim, namely that "Areas of new relevance in management can also benefit from
50
51 explanations that combine theoretical lenses". This links clearly with the line of argument
52
53 purporting that more needs to be done in the area of interpreting the practical and operational
54
55 issues associated with international research findings (Sinkovics & Penz, 2011, p.706).
56
57
58
59
60

1
2
3 Furthermore, we adhere quite firmly to the belief that producing a “unifying theory”
4 (Crossan, Maurer & White, 2011) or working towards such an objective, is worthwhile and
5 requires that researchers rise to the intellectual challenge and ensure that research findings
6 permeate into the learning/teaching environment. By doing this, we will help to develop
7 knowledge in the way outlined by Yadav (2010) and this should foster additional
8 collaboration among academics of an interdisciplinary and multi-disciplinary nature.

19 **7. Limitations and Research Implications**

20 The authors recognize that by analyzing and interpreting data from three in-depth, personal
21 interviews with senior marketing managers employed by one chaebol only the research
22 findings can be considered limited. It can also be suggested that the grounded theory
23 approach has its critics and is known to have a number of limitations (Suddaby, 2006;
24 Urquhart, Lehmann & Myers, 2010), however, the grounded theory approach is recognized as
25 an interpretive process, contributes to the development of theory (Urquhart, Lehmann &
26 Myers, 2010), and allows the researcher a certain degree of flexibility (O’Brien & Linehan,
27 2014). What is encouraging is that several areas for further research emerged from the study
28 and we suggest that work in the area of reducing cultural distance can be undertaken in order
29 to explain how specific aspects of marketing can be improved through information sharing
30 involving in-house groups (interpreted as intra-group activity) and partnership arrangements
31 (interpreted as inter-group activity). Should this be the case, the work undertaken by Wei,
32 O’Neill, Lee and Zhou (2012), can be taken a stage further and additional knowledge
33 generated into how the information-sharing process is reinforced by cultural value systems
34 and how marketing staff and human resource management specialists can work together in
35 order to create organizational uniqueness. This would reinforce the work already undertaken
36 by Drechsler, Natter and Leeflang (2013). It would also add to the knowledge already
37

3 produced by Salomo, Kleinschmidt and De Brentani (2010) and take forward the insights
4 provided by Henard and McFadyen (2005) into how a company can exploit knowledge and
5 how appropriate research initiatives can be linked with a persistent investment strategy so
6 that limited resources are optimized.
7
8
9
10

11 A comparative longitudinal study involving staff from a different cultural setting
12 should be undertaken in order to establish how staff engage with multiple teams and set tasks,
13 how they are assigned roles and how individual team members identify with other
14 organizational teams members (Glynn, Kazanjian & Drazin, 2010). By undertaking
15 additional research such as this, it will be possible to produce new insights into social identity
16 theory (Ellemers, Sleebos, Stam & de Gilder, 2013, p.22). As a result, researchers will have a
17 more in-depth appreciation of corporate management learning (Easterby-Smith & Thorpe,
18 1997) and it should provide evidence as to how team members within organizations are
19 rewarded (Faure, 2009). This would be beneficial as it would allow a more in-depth
20 appreciation to be made of how individuals move from an in-group to an out-group and vice
21 versa.
