Keywords: companion animal; obesity; overweight; One Health

Dear Editor,

We appreciate the interest [1] in our opinion paper [2] regarding companion animal obesity and, although there is limited published evidence, agree that some pet owners might respond negatively when this issue is addressed. As a One Health problem, we are not surprised that scientific literature corroborates under-reporting of obesity by human health care providers and common barriers to discussing this disease. We agree that further studies are warranted to encourage and assist veterinarians in both reporting and discussing overweight and obesity.

Author Contributions: B.S.K. conceived of the paper; B.S.K. and A.J.G. co-wrote and edited the paper.

Conflicts of Interest: A.J.G.'s academic post at the University of Liverpool is financially supported by Royal Canin. A.J.G. has also received financial remuneration for providing educational material, speaking at conferences, and consultancy work from this company; all such remuneration has been for projects unrelated to the work reported in this manuscript.
