INSTITUTE OF WATER RESOURCES

University of Alaska
College, Alaska

A Bibliography of Arctic Water Resources

In July, 1969, the Institute of Water Resources began a study of Alaska's Arctic water resources in response to the impending resource development of Arctic regions. The intent of the study was to provide a literature review of existing information, a model study of the water system in an Arctic region, and a limited field program. It became quite apparent early in the study that a great amount of literature pertaining to the Arctic water cycle was available and would need extensive organization to be useful. It also became apparent that if the literature were organized, the list would be useful to investigators other than ourselves. The result is this Bibliography of Arctic Water Resources.

The bibliography was a compromise dictated by cost and available personnel. It certainly could have been much more complete and perhaps a categorical subject listing would have been useful. However, the keyword format was easily accomplished and was amenable to computer manipulation and printing.

The entries were selected for inclusion on the basis of their relevance to the understanding the nature of the land-based water cycle in Alaska's Arctic and Sub-Arctic regions. All available references to Alaskan areas with the exception of the southeast region were included. With few exceptions material has been excluded which was primarily concerned with the mechanical aspects of permafrost and oceanographic data. References concerning glaciology, water supply, and waste disposal were not specifically searched, but were included when available.

The references were drawn from a wide range of sources. Special mention should be made, however, to Arctic Bibliography, published by the Arctic Institute of North America; Ground Water in Permafrost Regions, by R. A. Williams of the U.S. Geological Survey; the current reference list of the Polar Record; and the various reports and bibliographies of the U.S. Army Cold Regions Research Laboratory. In addition, extensive use was made of the libraries on the University of Alaska campus.

We hope to issue an addendum to the bibliography at periodic intervals in the future. We would appreciate the aid of users of this bibliography by calling to our attention any omissions in this listing and new references as they become available. Also, any suggestions for improvement of the format will be welcome.

We wish to express our appreciation to Mrs. Susan Holty who did much of the library research, and to Mrs. Diane Fredenhagen who did the keypunching for the bibliography. Also, we wish to acknowledge the help of the Institute of Marine Science at the University of Alaska and Dr. C. Peter McCroy who furnished the computer program. The research for this publication was performed under Annual Allotment Agreement No. I4-01-0001-3001, Project No. A-031-ALAS of the Office of Water Resources Research.

Instructions for Use

The bibliography consists of two parts - a keyword listing and a citation section. The two are linked together by accession numbers on the right side of the page. The keyword section is listed in alphabetical order and the citation section is listed in numerical order of the accession number. In most cases, the keywords include the name of the author and the area with which the work is concerned, as well as the geographical location of the work.

The list of keywords describing each publication appears in the listing as many times as there are keywords in that description. For instance, if "*Smith *Lakes *Alaska, North Slope" were the three keywords describing a publication, the description would appear in three different locations alphabetically as follows:

*Alaska, North Slope	*Smith	*Lakes	0305
*Lakes	*Alaska, North Slope	*Smith	0305
*Smith	*Lakes	*Alaska, North Slope	0305

The publication could be found by looking up 0305 in the Citations Section. By scanning all of the keywords an idea of the content of the publication may be obtained.
