ABSTRACT

The development of human civilization from time to time has produced many advances in various fields both in terms of technology or in other fields, especially in the field of industry, especially in the sales department. Similarly, what happened to PT. Interbis Sejahtera Palembang which produces various kinds of biscuits and then sells them to various cities. In the sales section of PT. Interbis Sejahtera itself has several parts or work units that are interconnected with one another, such as in the production section that is connected with the sales department. In the production section it will be responsible for matters relating to the production of goods such as available biscuits or biscuits that are close to expiration, then the sales department will be responsible for items such as biscuits which will be marketed to various agents in each city. The purpose of this report is to analyze and design a sales system database at PT. Palembang Interbis Sejahtera which consists of table needs specification table that is needed by the system and display interface on the system to be used based on the existing business processes at PT. Interbis Sejahtera Palembang.
