Correction: Reliable transgene-independent method for determining sleeping beauty transposon copy numbers

Orsolya Kolacsek¹, Virág Krízsik¹, Anita Schamberger¹, Zsuzsa Erdei¹, Ágota Apáti¹, György Várady¹, Lajos Mátés², Zsuzsanna Izsvák^{2,3}, Zoltán Ivics^{2,3}, Balázs Sarkadi¹ and Tamás I Orbán^{1*}

Correction

After the publication of our article [1], the authors noticed two typing errors in the 'Methods' part of the original article:

- in Table two, the correct sequence of *RPPH1* / Probe is 2 nucleotides longer at the 3' end, so it is: CACTCCCATGTCCCTT ;
- in the penultimate sentence of the 'Quantitative real-time PCR' section, the concentrations of the primers and the probe were switched so the correct sentence should be: "Final concentrations of primers and probes were 900 and 250 nM, respectively."

The authors apologize for these unintended mistakes in the text.

Competing interests

The authors declare that they have no competing interests.

Authors' contributions

OK established the HEK clones, OK and VK optimized the real-time PCR and performed copy number measurements, AS, ZE and AA established the HUES9 clones, GV helped in FACS measurements, LM measured copy numbers in HeLa clones, Zsl and ZI gave technical help and advices with the SB transposon work, BS provided financial support and discussed the data and TIO designed the overall strategy, analyzed the data and wrote the paper. All authors read and approved the final manuscript.
