Cells maintain a fine-tuned concentration balance in the pool of deoxyribonucleoside 5'-triphosphates (dNTPs). The perturbation of this balance results in increased mutation frequencies suggested to promote cancer development and drug resistance. To study dNTP imbalances and their consequences, an accurate and relatively high-throughput method is necessary. The dNTP quantitation method of our choice is a fluorescence-based, TaqMan-like polymerase assay published by Wilson et al, NAR 2011. This assay has the advantages of being accessible in a standard molecular biology laboratory and having the potential to be automated in contrast to mass spectrometry or radioactive measurements. Although this method works well in diluted samples with high dNTP levels, we observed that the sample matrix largely decreases assay performance.

Upon thorough kinetic analysis of the fluorescent dNTP incorporation curves, we found that the Taq polymerase exhibits a dNTP independent, signal generating exonuclease activity and that the polymerization and exonuclease activity are partially inhibited by the sample matrix. Based on our kinetic investigations we suggest several assay modifications and a novel, kinetics-based and automated analysis method. Using these modifications, we measured dNTP pools in widely different organisms including *Mycobacterium smegmatis*, *Staphylococcus aureus* and human cancer cells. We found that our improved method is capable of i) determining dNTP concentrations in samples previously proved to be unmeasurable by eliminating the interfering matrix effect, and ii) improving the quantitation limits of the assay.

WELCOME

Dear Colleagues,

It is our honour and pleasure to welcome you at the FEBS3+ conference '**From molecules to living systems**', in Siófok, Hungary. The FEBS3+ conference scheme supports the joint organisation of scientific meetings by three or more FEBS constituent societies. Accordingly, the Siófok meeting is hosted by the Hungarian Biochemical Society, and is organised together with the Slovenian Biochemical Society, the Croatian Society of Biochemistry and Molecular Biology, and Serbian Biochemical Society. With this conference we aim to replicate the format and build on the success of two earlier FEBS3+ meetings held in 2012 in Opatija, Croatia; and in 2015 in Portorož, Slovenia. The conference will also be considered the National Annual Meeting of the participating societies.

The scientific program will cover the most up-to-date topics in the field of molecular life sciences, particularly biochemistry and molecular biology. Special attention will be given to omics and systems approaches, and to studies exploring the molecular basis of disease. The scientific sessions are organised around themes that are most attractive to the participating societies. We are pleased and honoured the Scientific Program is hallmarked by 1-1 plenary speakers from each organising country; moreover, two of them are FEBS National Lecturers at the same time. We believe that the conference will also provide an excellent opportunity to showcase our latest results in this collection of fast moving and topical research fields, find new ideas and establish new scientific collaborations among the organising countries. We wish to thank the suppliers of laboratory consumables and equipment who are essential for the progress of biomolecular science. We are very grateful for their support of the conference.

In addition to the dynamic and interesting scientific program, we invite you participate in social events. In the first evening we organise a Welcome Party, while on Tuesday afternoon the participants of the conference are invited to get to see the largest freshwater lake of Central Europe, Lake Balaton, by a boat cruise. During the cruise, you can admire the Balaton and its active sailing scene, and the lakeside attractions such as the Tihany Peninsula with its 11th century Benedictine Abbey, which has been declared one of the World Heritage Sites by UNESCO. After the boat excursion, a unique style conference dinner will be organised in the form of a barbecue party on the shore of Lake Balaton.

We wish you all a fruitful and enjoyable meeting and a pleasant staying at picturesque Lake Balaton.

- P12-14 IRISIN AND BMP7 INDUCE DISTINCT GENE EXPRESSION PATTERNS BUT NOT THE THERMOGENIC GENES IN HUMAN ADIPOCYTES FROM THE NECK**
Abhirup Shaw, Beáta Bartáné Tóth, Rini Arianti, Attila Vámos, Ferenc Győry, Szilárd Póliska, Endre Károly Kristóf and László Fésüs
- P12-15 KIT AND ERBB2 AS EMERGING BIOMARKER CANDIDATES IN HEPATOCELLULAR CARCINOMA**
Otilia Menyhárt, Ádám Nagy and Balázs Győrffy
- P12-16 LOW INTENSITY EXERCISE IN THE PREVENTION OF DISTURBANCES IN CARDIAC INSULIN SIGNALING AND NO PRODUCTION IN INSULIN RESISTANCE MODEL**
Jelena Stanišić, Goran Korićanac, Mojca Stojiljković, Tijana Ćulafić, Milan Kostić, Snježana Romić, Marija Pantelić and Snežana Tepavčević

- P12-17 PHYSICO-CHEMICAL PROPERTIES, ANTIOXIDANT CHARACTERISTICS AND TOTAL PHENOLIC CONTENT OF APIS MELLIFERA UNIFLORAL HONEYS**
Drago Bešlo, Ana-Marija Crnoja, Ana Minarik, Suzana Kristek, Bono Lučić
- P12-18 QUANTITATIVE DETERMINATION OF MEMBRANE TRANSPORTERS IN RED BLOOD CELLS; IDENTIFICATION AND CHARACTERIZATION OF CLINICALLY RELEVANT GENETIC VARIANTS**
Boglárka Zámbó, Orsolya Mózner, Zsuzsa Bartos, Edit Szabó, György Váradyi, László Homolya, Balázs Sarkadi
- P12-19 SCREENING OF ANTIHORMONAL AND ANTICANCER POTENTIAL OF HETEROCYCLIC ESTRANE STEROIDS**
Suzana Jovanović-Šanta, Bianka Edina Herman, István Zupko, Ágnes Kulmány, Imre Ocsovszki, Andrea Nikolić, Marina Savić, Aleksandar Oklješa and Mihály Szécsi
- P12-20 SILENCING OF RECQL HELICASE DECREASES THE TUMOUR GROWTH OF GLIOBLASTOMA CELLS IN A ZEBRAFISH EMBRYO XENOTRANSPLANTATION MODEL**
Bernarda Majc, Miloš Vittori, Barbara Breznik and Tamara T. Lah
- P12-21 T-CELL LYMPHOMA MARKERS**
Petra Korać, Marija Klasić, Luka Tandarić, Vlatka Zoldoš and Mara Dominis
- P12-22 THE IMPACT OF CYSTEINE PEPTIDASE CATHEPSIN X ON IMMUNOSUPPRESSIVE PROPERTIES OF MDSC**
Tanja Jakš, Urša Pečar Fonović, Urban Švajger, Anja Pišlar and Janko Kos
- P12-23 THE INFLUENCE OF INSULIN ON ARTERIAL REACTIVITY VIA PERIVASCULAR ADIPOSE TISSUE (PVAT) IN RAT**
Radoslava Emilova, Bilyana Ilieva, Daniela Dimitrova, Mitko Mladenov, Nikola Hadzi-Petrushev, Rudolf Schubert and Hristo Gagov
- P12-24 THE POTENTIAL ROLE OF BILE ACIDS IN THE EPIGENETIC REGULATION AND PHARMACOLOGIC DNA DEMETHYLATION IN COLORECTAL ADENOCARCINOMA**
Vanesa Sekeruš, Karmen Stankov, Vesna Kojić, Aleksandra Nikolić and Momir Mikov
- P12-25 THERMOGENIC INDUCTION DOWNREGULATES MITOPHAGY IN HUMAN PRIMARY BEIGE ADIPOCYTES**
Mária Szatmári-Tóth, Abhirup Shaw, Endre K. Kristóf, István Csomós, Zoltán Balajthy, Ferenc Győry and László Fésüs
