PO Box 53, N-2027 Kjeller, Norway**

October, 2003

INDEX:

- 1. Introduction**
- 2. Name of the files**
- 3. Description of Population data.**
- 4. Description of Building Information.**
- 5. Description of ArcView Files.**
- 6. Conclusions.**

Annex. District Information: Area divisions, population and number of buildings

1. INTRODUCTION.

In order to apply HAZUS methodology to a real seismic risk study outside USA, the Oslo municipality was chosen as study region. The civil institutions were asked for necessary information and we were provided with different ASCII and Arcview files which I will describe here.

2. NAME OF THE FILES.

Data Files:

- Be2001056d.xls; Be2001073d.xls; Be2001086d.xls.
- Norsar_bygg.res; norsar_meterialer.csv; norsar_nagr.csv; norsar_type.csv

The Excel files describe population data in the Oslo municipality classified by different categories.

On the other hand, the *.res and *.csv files describe building information in the Oslo municipality.

3. DESCRIPTION OF POPULATION DATA.

File: be2001056d.xls

This file collects the population data classified by districts (17 districts) and by age group (0-5, 6-12, 13-15, 16-19, 20-29, 30-39, 40-49, 50-66, 67-79 and + 80).

There are 3 tables: The first one contains the number of inhabitants in each district and in each group of age; the second one contains the percentage of inhabitants over the total population of the municipality and classified by district and group of age and the third one contains the percentage of inhabitants over the total population of each district and classified by group of age.

The classification in districts here is different from the Arcview information of districts and buildings so I have considered the Arcview information.

File: be2001073d.xls

This file collects the population data classified by districts, areas within each district and age group (the same age group as before).

There is a table containing the number of inhabitants in each district classified by area and age group and a table with the total of inhabitants in all the areas which form the Oslo municipality, also classified by age group.

As the area division is the same as shown in the Arcview files containing building information, this file has been used in order to calculate the total number of inhabitant in each district (27 districts shown in Arcview files).

Fichero: be2001086d.xls

This file collects the population data classified by district, census year and age group. There is a table for each district containing the total number of inhabitants who were included in the census in the years (1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001 and 2002), classified by age group. Also there is a table containing population in unknown districts and other table containing the total number of inhabitants in each district and classified by census year and age group.

4. DESCRIPTION OF BUILDING INFORMATION

File: norsar_bygg.res

This file collects building information related to the Oslo municipality. The file contains 87499 rows and 18 columns. The file cannot be opened in Excel (too many rows) so it has been opened with Access and exported to a DbaseIV file named *allbydel.dbf*.

The 18 columns (fields) of the building database are the following ones:

Byggnr. : Numerical code of each building. For example: 80487525

Status: Numerical code of value 2 (always).

Type: Numerical code related to the type of building. Numerical code description is given in the file *norsar_type.csv*. For example: 111 is a single house.

Naering: Alpha-numerical code of each developed activity. The code description is given in the file *norsar_nagr.csv*. For example: *X* means *Dwellings or Housing* and 3 means *Minery and Industry*. The code 1 means *Unknown*.

Fund: Numerical code related to the foundations of the building. The code description is given in the file *norsar_meterialer.csv*. For example: 3 means *Piles*.

Vertikal.: Numerical code related to vertical carrying construction. The code description is given in the file *norsar_meterialer.csv*.

Horisont.: Numerical code related to horizontal carrying construction. The code description is given in the file *norsar_meterialer.csv*.

Mat. iytterv: Numerical code related to building materials. The code description is given in the file *norsar_meterialer.csv*.

Ant. boliger: Number of apartments (homes, living area for one household).

Tot. Areal: Total Area (km²)

Ant. etasjer: Number of flats.

Grunnareal: Foundations area (km²).

Nord: North Coordinate (Norwegian reference system)

Ost: East Coordinate (Norwegian reference system)

Bydel: District (There is 27).

Valgkr.: Constituency.

Grunnkr.: Area code.

5. DESCRIPTION OF ARCVIEW FILES

The coordinate system used in order to represent Oslo municipality information in Arcview is a local rectangular system, squared in a grid, as shown in Figure 1. The size of the cells is 800 units in the X-axis (E-W) and 600 units in the Y-axis. There are 7 cells starting from the origin towards the W (from A to G) and 17 cells from the origin to the E (from A to R). There are 20 cells starting from the origin toward the S (from 1 to 20) and 14 cells from the origin towards the N (from 1 to 14). That is the size of the grid is 19200 m wide (E-W) and 20400 m height (N-S).

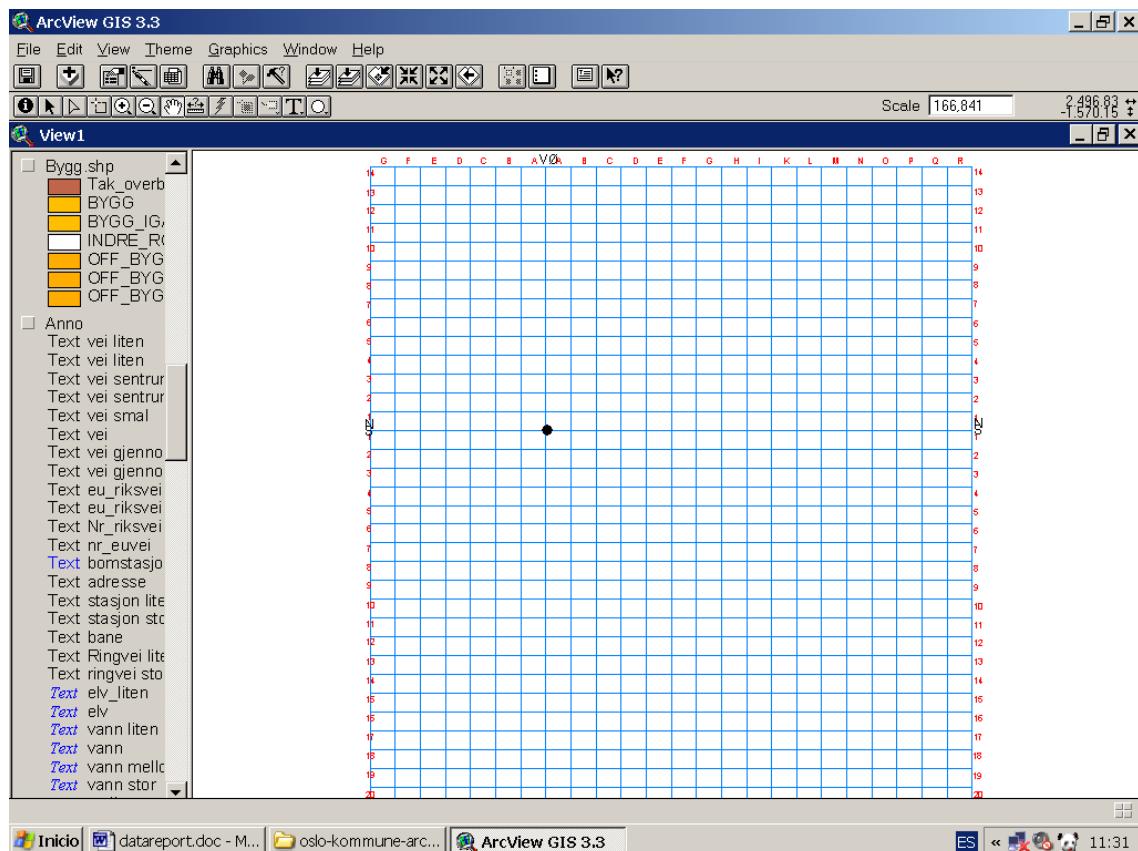

Figure 1. Rectangular coordinate system in which Oslo municipality information is projected. The black dot is the coordinate origin.

The Oslo municipality is divided in 27 districts (bydeler) as shown in Figure 2. These districts are also divided in areas of lesser size (Grunnkr.) as shown in Figure 3. Table 1 shows each district and its area divisions.

Number	Name	Area divisions
1	Bygdøy Frogner	5601 a 5603; 5701; 601 a 611; 501 a 504; 301 a 303; 701; 708 a 710 = 26
2	Uranienborg / Majorstuen	308; 612 a 614; 702 a 707; 801 a 809; 901 a 913 = 32
3	St. Hanshaugen / Ullevål	202 a 204; 1001; 1101 a 1106; 1201 a 1211; 1301 a 1304; 1401 a 1403; 1501 a 1504; 1709; 4505; 4510; 4605 a 4606 = 37
4	Sagene / Torshov	1404 a 1406; 1601 a 1607; 1701 a 1708; 1801 a 1802; 1901 a 1908; 2001 a 2006; 2009 a 2012; 2102 = 39
5	Grünerlokka / Sofienberg	206 a 210; 1305; 2007 a 2008; 2201 a 2209; 2301 a 2313; 2402 a 2407; 2410 = 37
6	Gamle Oslo	2401; 2408 a 2409; 2501 a 2506; 2601 a 2610; 2701 a 2706; 2801 a 2804; 2901; 3501; 3514 = 32
7	Ekeberg Bekkelaget	2805; 3001 a 3010; 3502 a 3505; 3509; 3513 = 17
8	Nordstrand	3101 a 3106; 3011 a 3012; 3201 a 3202; 3306; 3407 = 12
9	Sondre Nordstrand	3203 a 3215 ; 3301 a 3305 ; 3307 a 3318 = 30
10	Lamberseter	3401 a 3403; 3405 a 3406; 3408 a 3409; 3416; 3107 = 9
11	Bøler	3410 a 3411; 3413 a 3415; 3417; 3609; 3610 a 3611 = 9
12	Manglerud (sin numerar en mapa)	3506 a 3508; 3510 a 3512; 3404; 3412; 3601 a 3604 = 12
13	Østensjø	3605 a 3608; 3612 a 3615; 3617 a 3618; 3706; 3709; 3711 = 13
14	Helsfyr Sinsen	2101; 2103 a 2109; 3616; 4201 a 4206; 4208; 4210; 4302 a 4306 = 22
15	Hellerud	3701 a 3705; 3707 a 3708; 3710; 3712 a 3721; 4207 = 19
16	Furuset	3801 a 3821; 3910 a 3913 = 25
17	Stovner	3902 a 3904; 3906 a 3909; 3914 a 3923; 4008 = 18
18	Romsås	3901; 3905; 4010; 4012 a 4013 = 5
19	Grorud	4001 a 4007; 4009; 4011; 4014 a 4018; 4114 = 15
20	Bjerke	4101 a 4113; 4115 a 4116; 4118 a 4122; 4209; 4301; 4307 = 23
21	Grefsen Kjelsås	4117; 4401 a 4410; 4413 a 4418 = 18
22	Sogn	4411; 4501 a 4504; 4506 a 4509; 4511 a 4513; 4607 a 4608; 4610 = 15
23	Vinderen	4601 a 4604; 4609, 4611; 4701 a 4702; 4704 a 4705; 4904 a 4906; 4908; 5001 a 5004 = 18
24	Røa	4801 a 4802; 4901 a 4903; 4907; 4909 a 4912; 5005 a 5006; 5007 a 5008; 5201 a 5205; 5209 = 20
25	Ullern	4703; 4706; 4803 a 4806; 5206 a 5208; 5210; 5301 a 5303; 5401 a 5406; 5501 a 5504 = 23
26	Sentrum (not numbered in map)	101 a 105; 201; 205; 211; 304 a 307; 309 a 310; 401 = 15
27	Marka (not numbered in map)	5101 a 5103; 5801 a 5805; 5901 a 5902; 6001 a 6002; 6004; 6005; 6007 = 15

Table 1. Districts and area divisions in Oslo municipality. Red numbers indicate area division outside Oslo municipality limits.

The file *allbydel.dbf* has been divided into 27 different files (one file by each district) so it has been possible to compile some information about each district. That information appears in the appendix at the end of this report.

Also all the urban area (Tettsted) of the Oslo municipality is included into the 26 first districts, so the district 27 is outside the urban area, as shown in Figure 4.

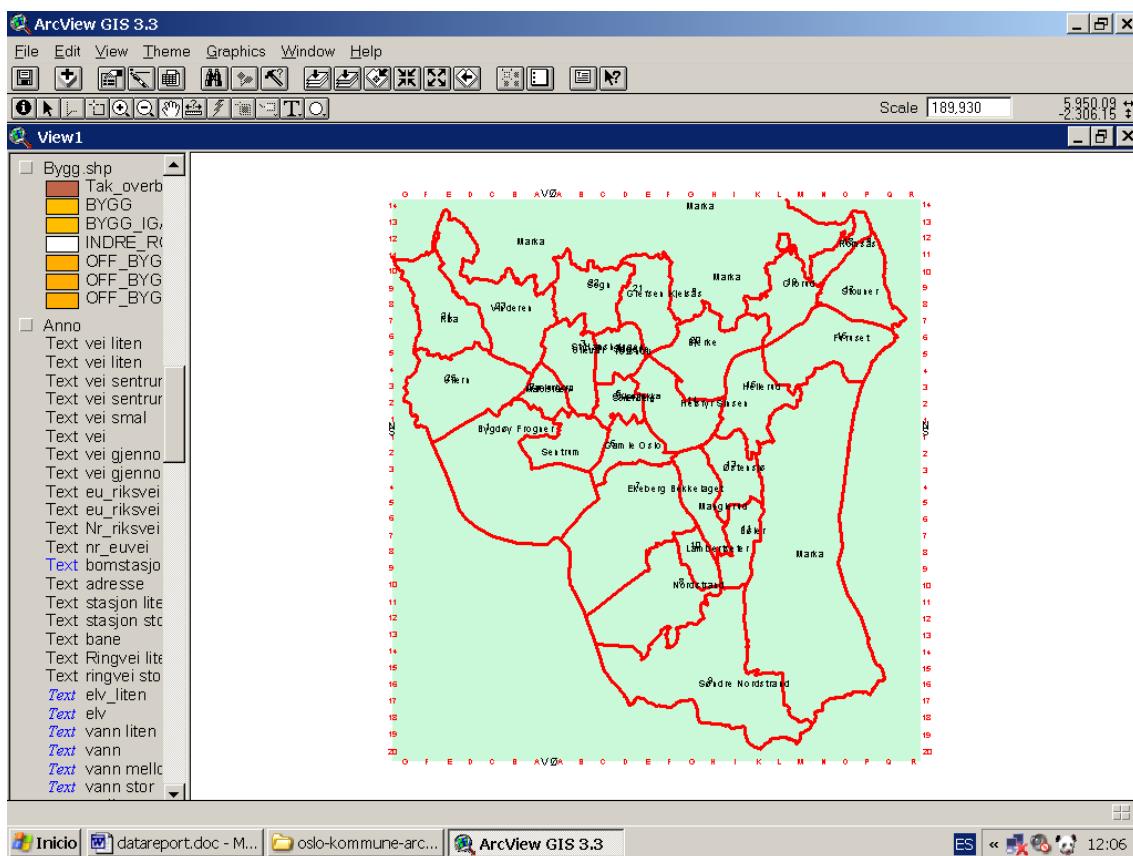

Figure 2. Districts of the Oslo municipality.

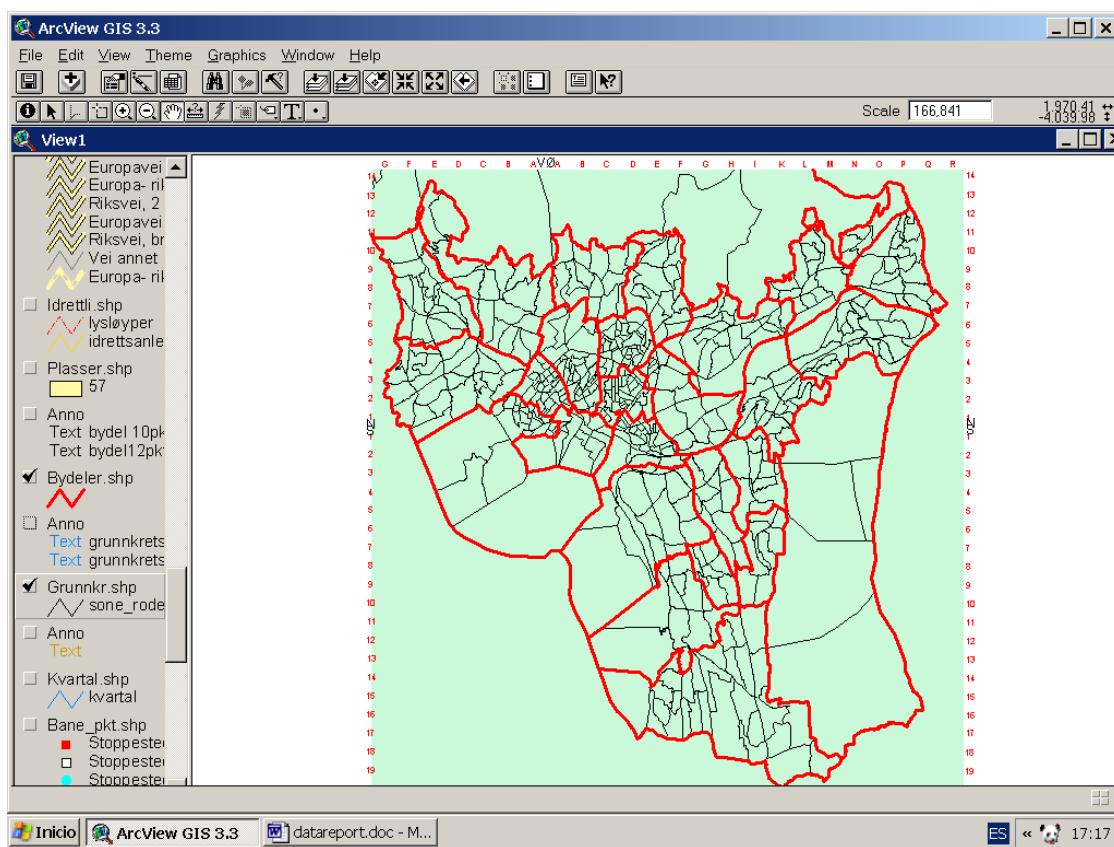

Figure 3 Area division of each district.

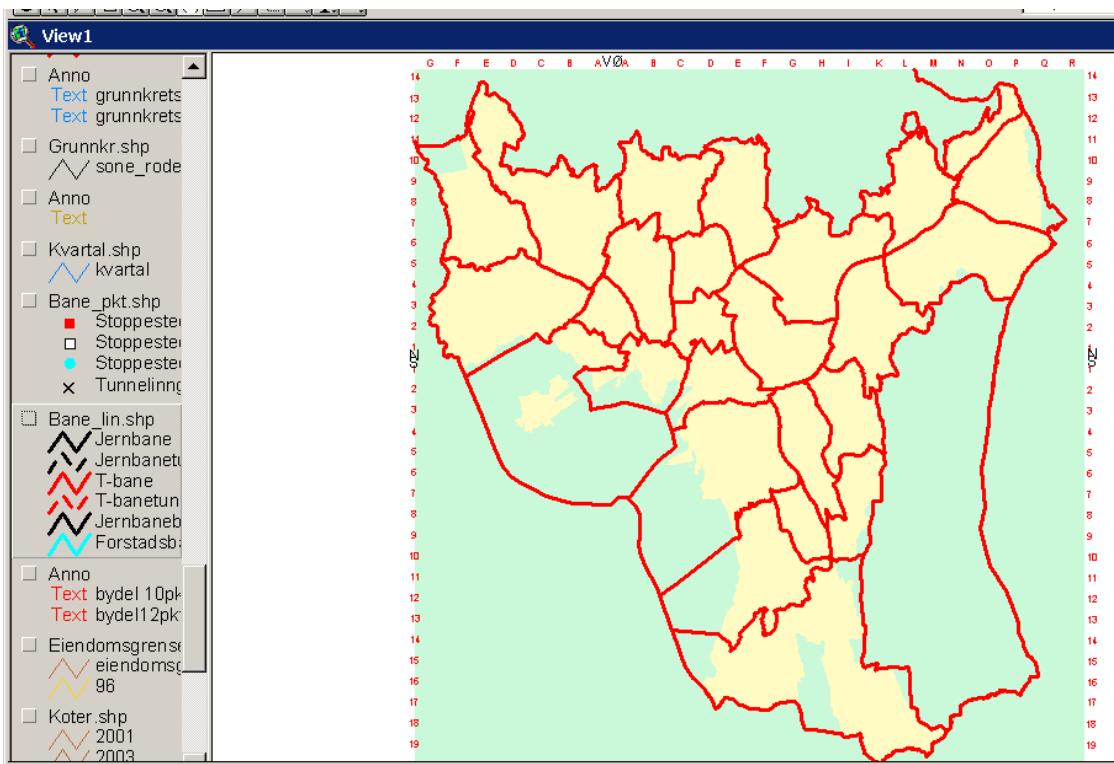

Figure 4. Urban area (Tettsted) in Oslo municipality (dark yellow colour).

Also, Figure 5 shows the communication lines. Railways are in black colour, railway tunnels are in black dashed colour, railway bridges in yellow colour; T-bane lines (green colour) and T-bane tunnels (green dashed colour) and local trains railways (tramways).

On the other hand we have information related to the streets, roads, ... in the Oslo municipality (senterl.shp) with their labels as shown in Figure 6.

Other Arcview shapefiles contain the building distribution (Bygg.shp), as shown in Figure 7 (zoomed), church location (kirkepkt.shp), sport installations (Idrettli.shp), the squares or open areas (Plasser.shp), the blocks (Kvartal.shp), the property limits (Eiendomsgrenser.shp), height curves (koter.shp and hoydekurver.shp), water limits contours (vannko.shp and vannfl.shp) and feeding activity areas (naeringsomr.shp), as shown in Figure 8 and 9.

Finally, other Arcview shapefiles contain soil information related to the depth of the sediments and drilling places, as shown in Figure 10 and the places with outcropping rock, as shown in Figure 11.

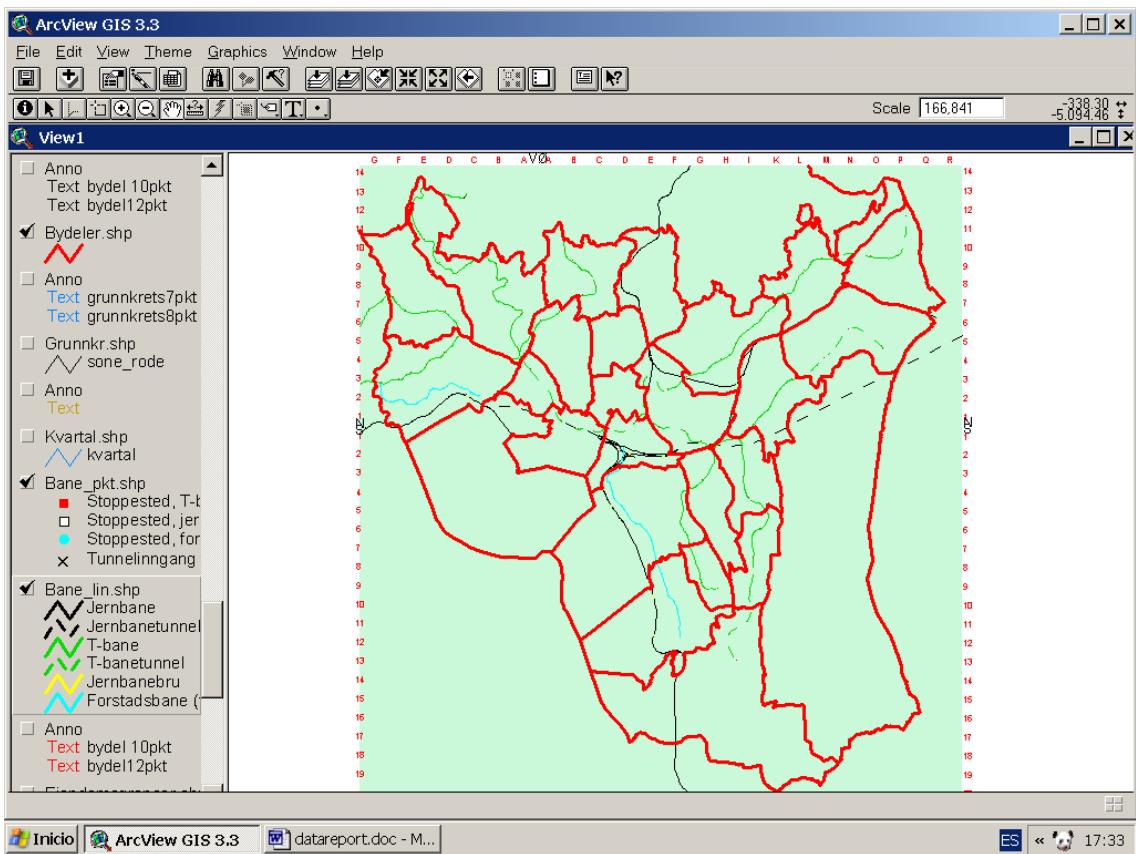

Figure 5 Transportatin Systems (Railways, tramways, and T-bane).

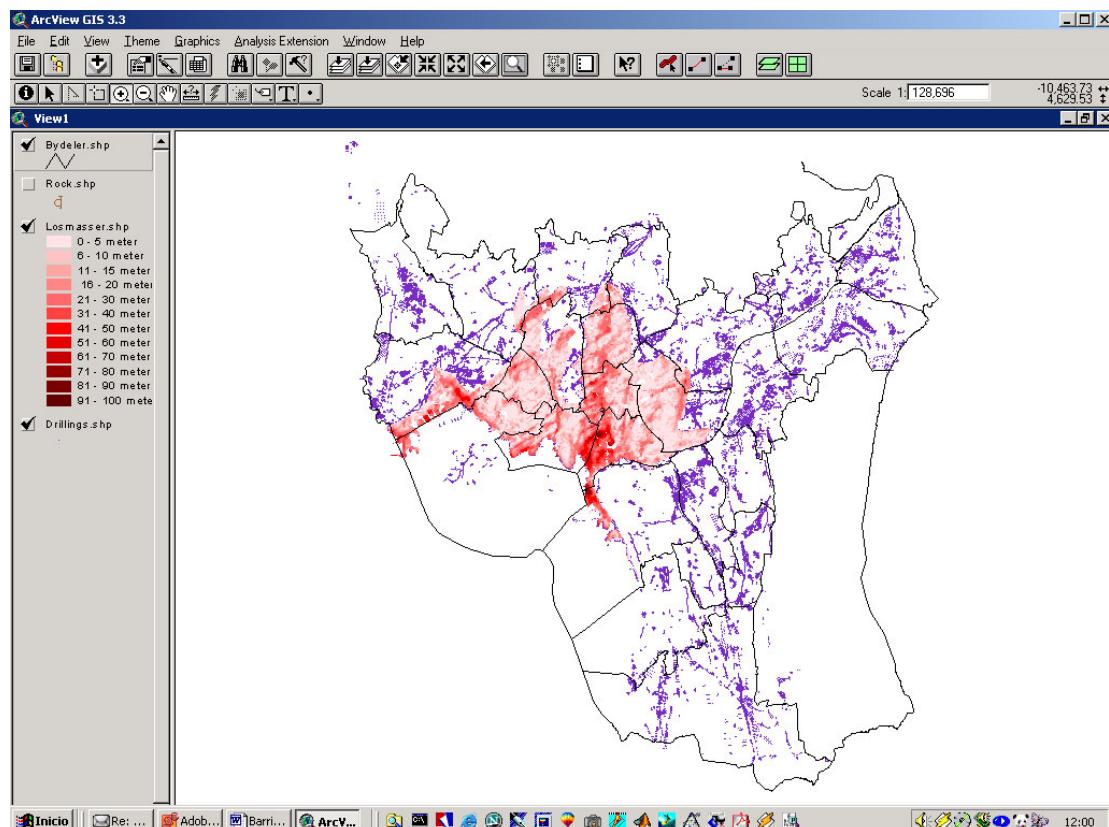

Figure 10. Depth of the sediments and drilling sites

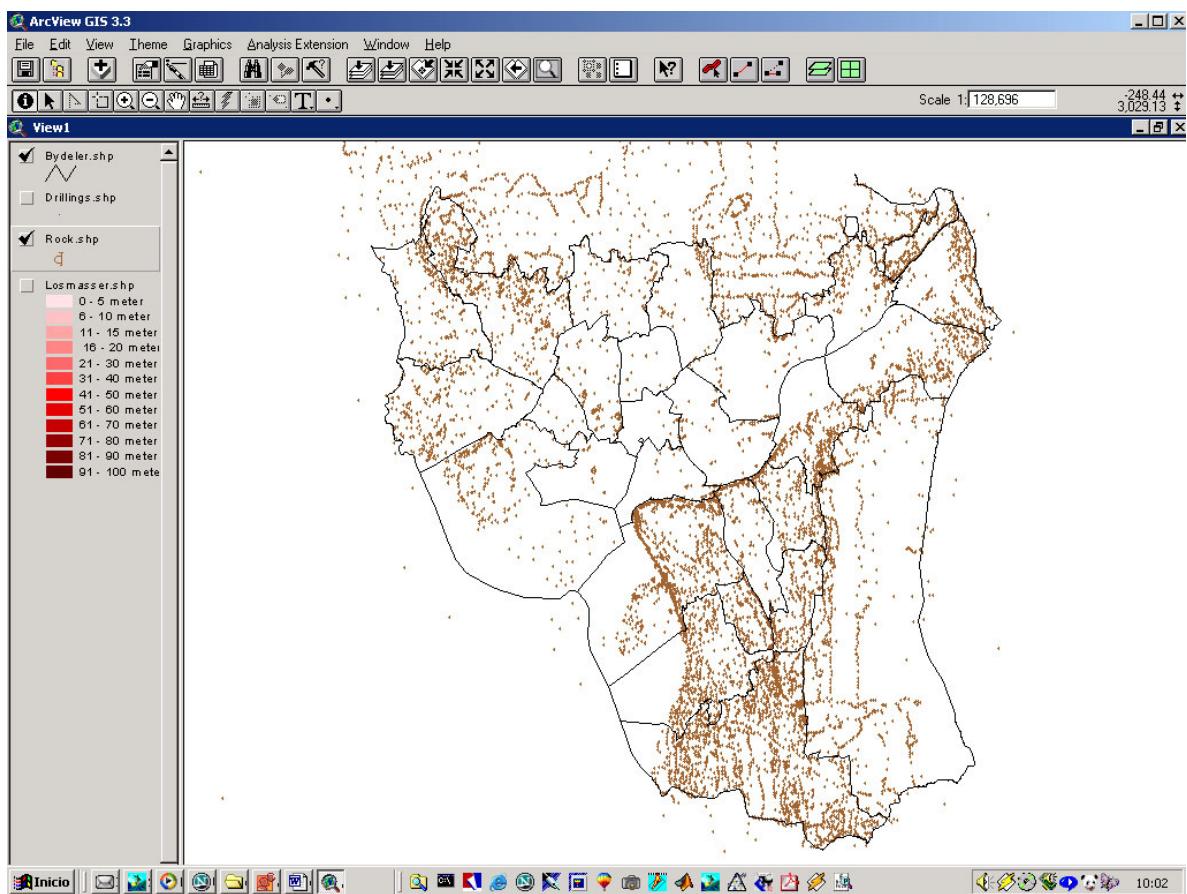

Figure 11. Sites with outcropping rock.

6. CONCLUSIONS

The information provided is enough to start an application of HAZUS methodology to Oslo municipality. Anyway, the following steps will be followed in the next report:

1. Divide each district into several “census tracts” according to the HAZUS methodology and taking into consideration the information given in the Annex.
2. Creation of Arcview Shape files according to the HAZUS format. That is, appropriate coordinate system, closed shapes, polylines, etc.
3. Classification of the building materials and techniques according to the HAZUS building inventory classification.
4. Link DbaseIV files to the Arcview Shape files with all the necessary information to achieve a seismic risk study using the HAZUS methodology.

ANNEX

DISTRICT INFORMATION:

AREA DIVISION, POPULATION AND NUMBER OF BUILDINGS
