

Predicting outgrowth and inactivation of Clostridium perfringens in meat products during Low Temperature Long Time (LTLT) heat treatment - DTU Orbit (09/11/2017)

Predicting outgrowth and inactivation of Clostridium perfringens in meat products during Low Temperature Long Time (LTLT) heat treatment

General information

State: Published

Organisations: National Food Institute, Division of Industrial Food Research

Authors: Duan, Z. (Intern)

Number of pages: 1

Publication date: 2013

Event: Poster session presented at 8th International Conference on Predictive Modelling in Food, Paris, France.

Main Research Area: Technical/natural sciences

Relations

Activities:

8th International Conference on Predictive Modelling in Food

Publication: Research - peer-review › Poster – Annual report year: 2013
