Acknowledgements

With much gratitude, I would like to thank:

My supervisor, Dr. Marianne Cronjé who has been by my side and supported me throughout this journey, for her constant input and always with an encouraging word to keep my spirits up.

My co-supervisor, Prof. Heidi Abrahamse for bringing this project to us, for bursary opportunities and for always keeping me motivated.

Prof. Tebello Nyokong who provided the photosensitizers which were used to conduct this work.

Denise and Nicolette and the members of the Laser Research Group, for the chats and advice which contributed towards the completion of this study.

The National Research Foundation, the National Laser Centre and the University of Johannesburg for their financial support.

Dad, Mom and Granny for your love and constant support and prayers through this very long journey, for your words of motivation and encouragement through the low times and celebrating with me during the good times.

Kimmy, the bestest sus in the whole wide world! Thank you for your support always, and for being just a phone call away when I needed someone to talk to about anything, good or bad.

Nicole, for always being there through the rough and tough times, and for

helping me through the work when I was just about ready to give up.

Tammy and Duane for their support and prayers throughout this ordeal. To Tam, for the many chats and phone calls, listening to me complain and yet always encouraging me through everything and helping me to see reason.

Ashleigh, for our brain-storming sessions which have so often led to solutions to problems and headaches, and for always just being there for a gripe session when things were not going well.

Raymond, my old lab buddy, my brain-storming partner, sounding board and good friend. Thank you for all your constant encouragement and input and for always helping me to keep my eye on the goal.

The gang, Eloise, Tamarisk, Rabia and John who always provided interesting conversations and provided a lot of fun and amusement in the lab, who were prepared to drop everything at any time to give me a helping hand.

Ria and Dewald, for their kindness and support, and for making life at the new lab so enjoyable!

My family, for always showing interest in my work and having caring and kind words ready whenever I needed to hear them.

All of my friends, who always had a word of motivation and who shared in this ordeal with me.

Last, but never least, I thank the Lord for guiding me through the course of the past few years, always helping me, carrying me through the tough times, and blessing me with many good and happy times.

For those who I have known and lost to this terrible disease...
