The most common reasons for toothache

Author: Natalija Gorgieva, Co-author: Lidija Angova

Mentor: Verica Toneva, Co-mentor: Sandra Atanasova

Faculty of medical sciences, University "Goce Delcev"-Stip

Abstract

Aim:Toothaches will make anyone feel uncomfortable and miserable. The drive to figure out what's causing it one pain is completely understandable, which is why we made this research to clarify and get closer the reasons to the public and of course to make a diagnosis.

Materials and methods: We made a questionnaire about five dots: the reason, duration, kind, a cause that intensifies the pain and a cause that calms the pain. Then we distributed it to the 42 responders on random choice regardless of gender, age, education etc. They fill up the questionnaire and we analyze the results which we received and sort them in graphics. The duration of this study was about 2 months.

Results: 78% of the responders answered the reason of toothache is some provoking warm or cold cause and that is the same cause that intense the pain. The pain lasted 10-15 seconds after the provocation with 45% of the responders. About the cause that calms the pain, they answered 47% that it passed by itself.

Conclusions: We can concluded that we, as dentists, must know some facts about the tooth pain of the patients, so we can understand it, make diagnosis and consequently to that, we can threat it.
