17 **Abstract**

18 *Background*

19 In recent times, sub-Saharan African (SSA) prisons have seen a substantial increase in
20 women prisoners, including those incarcerated with children.

21 *Methods*

22 A scoping review mapped what is currently known about the health situation and unique
23 rights violations of children incarcerated with their mothers in SSA prisons. A systematic
24 search collected and reviewed all available and relevant published and grey literature (2000-
25 2018). Following application of exclusion measures, 64 records remained, which represented
26 27 of the 49 SSA countries. These records were charted and thematically analysed.

27 *Results* Four main themes were generated as follows: 1) the prison physical environment; 2)
28 food availability, adequacy and quality; 3) provision of basic necessities and 4) availability
29 and accessibility of health services for incarcerated children.

30 *Conclusions* The review highlights the grave situation of children incarcerated with their
31 mothers in SSA prisons, underpinned by the lack of basic necessities, inadequate hygiene,
32 sanitation and safe drinking water, exposure to diseases in overcrowded cells, inadequate
33 nutrition, lack of provision of clothing and bedding, and difficulties accessing paediatric care.
34 Reported paediatric morbidity and mortality associated with such prison conditions is deeply
35 concerning and contrary to international mandates for the rights of the child, right to health
36 and standards of care.

38 **Key Words**

39 Sub Saharan Africa; prisons; women; infants; children, availability and accessibility of health
40 services, availability of basic necessities, human immunodeficiency virus infection, (HIV)

41 Background

42 Approximately 6.5% of the world's prisoners are women [1]. Whilst a minority, more than
43 500,000 women and girls are held in prisons and other closed settings, both as sentenced
44 prisoners or as pre-trial detainees [2]. This number has increased by about 50% since 2000 in
45 comparison to an 18% increase in the male population, and is rising in all regions of the
46 world where statistics are available [1]. **The dramatic increase in imprisoned women** is
47 important from a public health perspective. Women's special health needs relating to specific
48 health approaches, sexual and reproductive health (SRH) care needs, the treatment of
49 infectious diseases, nutrition and female hygiene requirements are often neglected in prisons
50 and other closed settings [3, 4]. Incarcerated women generally experience gender-specific
51 health-related challenges, which include menstruation, pregnancy and childbirth, care of their
52 children within and outside of prison, development of certain forms of cancer, and are often
53 exposed to gender-based violence in the form of physical/sexual abuse by prison officers and
54 male prisoners prisoners [5–8] Concerns around equitable quality and access to adequate
55 health care for incarcerated women and their children are evident [9] .

56
57 Humane treatment of incarcerated women, and provision of adequate health services for
58 women (and their infants and children) in prisons are mandated under the Sustainable
59 Development Goals (SDG's) 3, 5, and 16, as well as under United Nations instruments;
60 Standard Minimum Rules for the Treatment of Prisoners (Nelson Mandela Rules)
61 (A/RES/70/175) [10] Standard Rules for Non-Custodial Measures (Tokyo Rules) [11] and
62 Rules for the Treatment of Women Prisoners and Non-Custodial Measures for Women
63 Offenders (Bangkok Rules) (A/RES/65/229) [12] The Bangkok Rules in particular stipulate
64 the standards for healthcare programming equivalent to that in the community and
65 recognition of women's specific health needs during incarceration, and also in relation to

66 their children who reside in prisons with their mothers. Overarching these rules is the United
67 Nations (UN) Convention on the Rights of the Child [13] The 2010 UN Guidelines for the
68 Alternative Care of Children mandate that: “best efforts should be made to ensure that
69 children remaining in custody with their parent benefit from adequate care and protection,
70 while guaranteeing their own status as free individuals and access to activities in the
71 community”[14].

72
73 The sub-Saharan African (SSA) region continues to be the epicentre of the HIV epidemic,
74 with two-thirds of all people infected with the human immunodeficiency virus (HIV) living
75 in this region, and with high rates of HIV reported in prisons [15, 16]. Female sex is
76 correlated with prevalent HIV infection in SSA prisons [15]. According to a recent evaluation
77 by the United Nations Office on Drugs and Crime (UNODC), the overwhelming majority of
78 prisoners in SSA, regardless of age and gender are detained under conditions that do not meet
79 or only partially meet accepted standards of care [17]. Prison environments in the SSA region
80 are compromised by weak prison and public health systems, failing prison infrastructure and
81 ineffective criminal justice systems with high rates of pre-trial detention [18]. Investment in
82 prison infrastructure is generally low across the SSA region [18]. In many SSA countries,
83 pre-trial detainees can remain awaiting trial for lengthy periods (sometimes years) and this
84 exacerbates the impact of such poor conditions of detention. As a consequence, overcrowding
85 is pervasive. It is therefore not only imprisoned mothers with their children that are suffering
86 such poor conditions, but the entire prison population in SSA [17, 18]. Weak prevention and
87 treatment interventions for HIV, tuberculosis (TB), cholera, and malaria in prisons exacerbate
88 the spread of disease [18, 19].

90 Children incarcerated with their mothers in the SSA region are a particularly under-
91 researched and vulnerable group [5] often described as “hidden victims”, with “their reality
92 and circumstances related to incarceration seldom recognised” [20] The children of particular
93 concern to policy-makers and researchers are those born in prison and those under the age of
94 eight years [21–25]. Potential factors supporting the incarceration of children with their
95 mothers include optimal duration of breastfeeding, strengthening of mother-to-child bonds in
96 early development and the inability of the mother to arrange alternative care for her child [5,
97 26]. With regard to children incarcerated with their mothers in SSA, the African Charter on
98 the Rights and Welfare of the Child (ACRWC) [27] affirms the principle of the best interests
99 of the child, with Article (19) stating that “the child shall be entitled to the enjoyment of
100 parental care and protection and shall, whenever possible, have the right to reside with his or
101 her parents. No child shall be separated from his parents against his will, except when a
102 judicial authority determines in accordance with the appropriate law that such separation is in
103 the best interest of the child.” Of note however is that SSA prisons generally do not budget
104 for the cost of looking after children born in prison and/or incarcerated with their mothers
105 [18].

106
107 Research activity on prison populations and their health needs remains scant in the SSA
108 region, and remains largely restricted to the gathering of strategic information on infectious
109 diseases such as HIV and TB, and generally conducted in adult male prisons [15, 18]. Very
110 little work has been done on women and their children incarcerated in the SSA region. A
111 2018 review has highlighted the abhorrent prison conditions for incarcerated women, and
112 neglect of their specific health rights and needs in this region [18]. To date, there has not been
113 an extensive review of published material on the conditions of children incarcerated with
114 their mothers in SSA. The present review seeks to fill that gap.

115 **Methods**

1
2 116 Scoping reviews are defined as a form of research synthesis that aims to map the literature on
3
4 117 a particular topic or research area and are used to identify key concepts; gaps in research, and
5
6
7 118 types and sources of evidence to inform practice, policymaking and research [28–31]. The
8
9 119 scoping review process was conducted by two authors with relevant expertise in community
10
11 120 medicine, prison and public health, gender and African health systems [28]. The underpinning
12
13 121 research question was; “What is known in the literature about the health situation and rights
14
15 122 violations specific to children incarcerated with their mothers in contemporary SSA prisons?”
16
17 123 The term “prison” was adopted as representing facilities housing both on-remand female
18
19 124 prisoners (including jails, police holding cells, and other closed settings) and convicted
20
21 125 female prisoners [18]. We restricted the scoping exercise to all records reporting on the
22
23 126 situation of children incarcerated with their mothers and including those born in prison and
24
25 127 those below the age of eight years permitted by prison services in SSA to be housed with
26
27 128 their mothers. The six-stage iterative process guiding the scoping review consisted of (1)
28
29 129 identifying the research question, (2) identifying relevant studies, (3) study selection, (4)
30
31 130 charting the data, (5) collating, summarizing and reporting the results, and (6) an international
32
33 131 expert advisory review exercise [28] . Search terms were generated in English, and combined
34
35 132 with SSA country names. The search strategy is illustrated in Table One.

40
41
42
43
44
45

133

134 **Insert Table One ‘Search terms and strategy’ about here**

135

50
51 136 The search was implemented in April and May 2018 in the University of Zimbabwe and
52
53 137 Liverpool John Moore’s University Library catalogues, PubMed Clinical Queries, and
54
55 138 Scopus (exploratory search with selected references downloaded for the purpose of clarifying
56
57 search terms). Comprehensive searches restricted to the time period 2000 to 2018 were
58
59
60
61
62
63
64
65

140 conducted in the Cochrane Library, Science Direct, PubMed, EBSCO, Host, Embase,
141 Medline, Embase, Medline in Process, PsycINFO and CINAHL.

142

143 To enable the broadest picture of current knowledge and perceptions relating to the issue of
144 infants' and childrens' health in SSA prisons, we included international and national policy
145 documents and reports, academic theses, online reports, country situational assessment
146 reports conducted by national, international and human rights organisations, conference
147 proceedings, commentary pieces and editorials, in addition to articles in scholarly **peer-**
148 **reviewed** journals. We included reports by the **Special Rapporteur on Prisons and Conditions**
149 **of Detention in Africa (hereinafter Special Rapporteur)** who assess whether conditions in
150 prisons and other closed settings are compliant with the African Union (AU) Member States'
151 international obligations toward persons deprived of liberty. Where possible, we also
152 included studies providing information about prison staff members' experiences and
153 perspectives on the conditions and rights of infants and children' in SSA prisons. Follow-up
154 search strategies included website searches of international aid, human rights and
155 development organisations, health, medical and human rights-related databases, websites of
156 SSA government and non-governmental organisational (NGO) bodies and investigative news
157 reports. Reference lists in reports, investigative news articles, journal papers and academic
158 theses were also manually searched by the team to identify any additional relevant literature
159 not captured.

160

161 Records were managed using EndNote. The title and abstract of each record were screened
162 by the second author, and cross-checked by the first author [28]. All records warranting
163 inclusion were procured for review of the full text version. A second screen of the full text of
164 each record was conducted by both authors. Studies were excluded at this stage if found not

165 to meet the eligibility criteria. Figure One reflects inclusion and exclusion criteria used to
166 chart the studies.

167

168 ***Insert Figure One ‘Flowchart for inclusion and exclusion of literature’ about here***

169

170 Following application of exclusion measures, 64 records were charted and thematically
171 analysed, as per Levac et al. [28]. This process of documentation and analysis of information
172 generated specific themes pertaining to incarcerated children and infant experiences, health
173 outcomes and unique prison health care needs in the SSA region. A spreadsheet was created
174 to chart relevant data (data collection categories, year of publication, author, location, method
175 and aim, key findings and conclusion) and identify commonalities, themes, and gaps in the
176 literature. We conducted a trial charting exercise of several records as recommended by
177 Daudt et al. [30], followed by a joint consultation to ensure consistency with the research
178 question and the purpose of the scoping review. Based on this preliminary exercise, we
179 developed prior categories which guided the subsequent extraction and charting of the data
180 from the records. All records were charted and analysed by the two reviewers in consultation,
181 with disagreements around theme allocation resolved through discussion. Where additional
182 data extraction categories emerged, consultation guided decisions around allocation and
183 reporting. Identified themes were further presented and discussed with key experts from the
184 SSA region [28] with expertise in prison health, health rights, SRH programming and
185 international aid, to ensure no useful records were missed and to elicit varied perspectives on
186 incarcerated children living with their mothers in SSA prisons.

187

188

189

190 **Results**

191 Literature was found representing 27 of the 49 SSA countries. These were Benin, Botswana,
192 Burundi, Cameroon, Chad, Côte d'Ivoire, Djibouti, Ethiopia, Ghana, Kenya, Madagascar,
193 Malawi, Mali, Mozambique, Namibia, Nigeria, Rwanda, Senegal, Sierra Leone, Somalia,
194 South Africa, South Sudan, Swaziland, Tanzania, Uganda, Zambia and Zimbabwe. We
195 present the countries with corresponding type of record (for example journal paper, report,
196 etc) in Table Two. For illustrative purposes where possible, we present quotes from included
197 qualitative studies.

198

199 **Insert Table Two ‘Summary table of country records’ about here**

200

201 **Theme One: The prison physical environment**

202 ***Overcrowding in female prisons***

203 The review highlights variation of degrees of overcrowding and standards of sanitation in
204 prisons located in SSA countries. In a literature review by Reid et al. in 2012 [8] on
205 tuberculosis and HIV Control in SSA prisons, the authors documented outdated physical
206 infrastructure of prisons and severe overcrowding with associated severe health harms. The
207 52nd ordinary Session of the African Commission on Human and People’s Rights in 2012 also
208 emphasised, given the levels of overcrowding, that SSA prisons were generally not a safe
209 place for pregnant women, babies and young children [32]. In 2013, Matsika et al. [33]
210 reported that in Zimbabwe, up to 15 women were crammed in one tiny cell with their
211 children. Zambian news reporting in 2014 also reported that conditions for pregnant women,
212 mothers and children in prisons were not safe [34]. In 2011, Todrys and Amon [35]
213 conducted in-depth interviews with 46 key informants (government and NGO), 38 adult
214 female prisoners and 21 prison officers in four Zambian prisons (Lusaka Central, Kamfinsa

65

215 State, Mumbwa, and Choma State), in order to assess perspectives on the health and human
216 rights concerns of female prisoners. Their general conclusion was that: “*women in Zambian
217 prisons live in conditions of severe overcrowding. Zambian prisons are over 300 percent of
218 capacity, and female inmates reported sleeping four to a mattress, packed together in
219 unventilated cells with young children and the sick*” [35]. A later qualitative study by Topp et
220 al. in 2016 in four Zambian prisons (23 female prisoners and 21 prison officers) reported
221 some improvement but with variations in levels of overcrowding in cells across sampled
222 prisons [36]. This was corroborated by findings reported by Malambo in 2016 [37]. In
223 Djibouti, overcrowding was less of an issue for incarcerated women and their children,
224 although conditions remained harsh with poor lighting and heating observed [38].

225 226 ***Lack of separate accommodation***

227 The provision of separate accommodation for women with their children where they are
228 housed separately from the main prison population has generally not improved in SSA
229 prisons. In 2017, the United States (U.S) Department of State reported that in Côte d'Ivoire,
230 Madagascar and Senegal, harsh prison and detention centre conditions were described as
231 potentially life threatening due to absence of separate cells for mothers and their children, and
232 with provided accommodation overcrowded, poorly ventilated and without sufficient natural
233 light [22, 39, 40]. The U.S Department of State reported in 2014 that in Benin, Burundi, Côte
234 d'Ivoire, Botswana, Nigeria and Tanzania, while children were permitted to stay with
235 mothers in prison, no separate accommodation was provided for them [23]. In the Ugandan
236 context (Masindi prison) as early as 2001, the AU Special Rapporteur reported on the lack of
237 availability of separate space for mothers with children [41]. In the years 2001, both the
238 Special Rapporteur [42] and Twea in 2013 [43] described Malawian nursing mothers and
239 their children housed in mixed, overcrowded, poorly ventilated and dark holding cells. Little

64
65

240 improvement was observed in Malawi or Côte d’Ivoire over time. A study by Baker and the
241 Danish Institute Against Torture (DIGNITY) in 2015 [44] reported that that there was no
242 separate accommodation provided for mothers with children in two large Zambian prisons.
243 Makeshift detention facilities holding many women and their children have been described in
244 Rwanda [45] . Women prisoners in Zambia described concern for their children’s health
245 when sharing accommodation with other prisoners;

246 *“...I am worried about the children who are here. There was a baby who died.*
247 *They don’t pay any particular attention to the children. They are mixed in with*
248 *everyone, they don’t have their own cell or better food...”[46].*

249 In 2014, the Zambia Times reported that sleeping conditions at Lusaka Central Prison for
250 children were not safe or secure. An officer commanding one of the Central Prisons in
251 Zambia commented;

252 *“...sleeping conditions at Lusaka Central Prison do not provide incarcerated*
253 *children with space that is safe and secure... We have people with different kinds of*
254 *ailments in prisons and children are supposed to be protected at all times... Yet now we*
255 *can’t find that environment in the prison at the moment...”[34].*

256
257 The overcrowded, poorly ventilated and unsanitary conditions in the majority of SSA prisons
258 that mixed the sick and the healthy was reported to exacerbate risk of poor health, and
259 increase risk of infection for mothers and their children [8, 15]. In Cameroon, Kenya, Nigeria
260 and Zimbabwe, prevalence of such ailments as colds, coughs, acute respiratory tract
261 infections, constipation, and rashes among children were attributed to poor environmental
262 health conditions in prisons [21, 33, 47–49]. A Zimbabwean female prisoner described the
263 grave conditions in the remand prison where she was being held before sentencing;

264 *“... Raising a child in this situation is like living in hell...”[50].*

265 ***Poor sanitation***

266 There were many reports of the accommodation of women with their children in inhumane,
267 poorly sanitised, ventilated, and in unhygienic conditions across the SSA region [21, 33, 35,
268 36, 44, 47, 48, 50–57]. More than half of the 27 SSA countries where literature was available,
269 reported poor sanitation in prisons, with little change since 2001. These countries were Chad,
270 Cameroon, Côte d'Ivoire Djibouti, Ethiopia, Kenya, Madagascar, Malawi, Mozambique,
271 Namibia, Senegal, Sierra Leone, Somalia, Uganda, Zimbabwe and Zambia [33, 34, 36, 41–
272 43, 48–53, 58–63]. Reports mentioned insufficient or broken-down toilets or lack of access to
273 toilets especially at night, failure to keep toilets clean through overuse, lack of water or
274 erratic water supplies, and location of the toilet or container in the room accommodating
275 mothers and their infants. In Zambia, a mother shared her experience of such conditions;

276 *“...You should smell the stench. All the kids are sick, with diarrhoea, and you’ve*
277 *got this stench coming from the toilet, and someone sleeping with a baby next to*
278 *it...”* [44].

279 In Cameroon, Nigeria, Sierra Leone and Zimbabwe, shared buckets in cell corners, often
280 overflowing, were used as toilets, with reports of women prisoners having to use their hands
281 and buckets to dispose of its contents when the drain overflowed and having to remove faeces
282 from the drain [47, 49, 51, 53, 64]. In Zimbabwe in 2003, women prisoners used 25 litre
283 plastic containers especially at night;

284 *“..By morning the bucket will be a total mess and mothers with babies had to*
285 *restrain them from crawling on the floor in such a mess...”* [53].

286
287 General hygiene for women and their children across all records was poor. Poor sanitary
288 conditions worsened by the inadequate supply of cleaning detergents and soap were reported
289 in Cameroon, Chad, Côte d'Ivoire, Djibouti, Ethiopia, Ghana, Kenya, Madagascar, Malawi,

58

290 Mozambique, Namibia, Nigeria, Senegal, Sierra Leone, Somalia, Uganda, Zambia, and
291 Zimbabwe [33, 41–43, 46, 48, 51–53, 55, 56, 59, 60, 62, 64–66]. In 2010, in South Africa,
292 Hesselink and Dastile [67] reported that only one bath, a shower and a toilet were available
293 for all mothers and their children at the Pretoria Correctional Centre. A mother at the Pretoria
294 Correctional Centre commented:

295 *“...Have to wake up at midnight or early hours in the morning for hot / warm*
296 *water...”* [67].

297 One woman shared her experience on the lack of hygienic bathrooms and of safe clean tap
298 water in a Zimbabwean women’s prison:

299 *“...Toilet sanitisers¹ are scarce. Sinks are not working and there is no running*
300 *water ...”* [63].

301 In contrast, the United Nations Office on Drugs and Crime (UNODC) in 2014 reported that in
302 South Sudan, basic cleaning products, disinfectants and sanitary napkins were provided by
303 the Juba State prison to female prisoners [68]. Since 2008, NGO and religious organizations
304 were described as providing toiletries to women prisoners in Burundi, Côte d'Ivoire, Sierra
305 Leone, Uganda, Zambia and Zimbabwe [23, 36, 37, 39, 41, 51, 52, 57, 69, 70].

306
307 The unhealthy environment exposed children (and their mothers) to gastro-intestinal
308 pathogens. A female prisoner incarcerated in Uganda in 2017 expressed her concern;

309 *“...The shortage of stable state supply of basic services...such as water makes it*
310 *more difficult for those who have children in prison ... this affects the care given*
311 *to the children, who have increased risk of diarrheal diseases...”* [62].

59 ¹ Toilet sanitisers are disinfectants or detergents used to disinfect toilets against such
60 infectious bacteria as E. coli, Shigella, Streptococcus, and Staphylococcus.

64
65

312 In 2017, Makau et al. [48] conducted a cross-sectional study with 202 children and 193
313 mothers in eight Kenyan prisons. They reported that diarrhoeal diseases and vomiting were
314 common among children in prison. The mothers attributed these illnesses to inappropriate
315 sanitary habits and to the fact that only a small proportion of children had access to
316 treated/boiled drinking water.

318 *Mother and baby units*

319 The review highlights where reporting is available, that there is great variation between
320 countries, and even between prisons within a given country. There have been some
321 encouraging improvements, albeit modest and at times temporary. Since 2014, in Ethiopia,
322 Ghana, Kenya and Uganda, a minority of prisons are reported to have separate mother and
323 baby units [41, 61, 62, 71]. South Africa is also a unique case in point. In 2010, a qualitative
324 study using in-depth interviews with a sample of 14 women conducted by Hesselink and
325 Dastile [67] in Pretoria and Johannesburg, described variations in accommodation
326 arrangements for mothers. All mothers and their babies at the Pretoria correctional centre,
327 were accommodated in one communal cell, with only three cots available for infants, while at
328 the Johannesburg female correctional centre women awaiting trial and those already
329 sentenced were housed in single cells (where the mother and the baby share a bed). The
330 Special Rapporteur in 2004 reported on the provision of a mother and baby unit in Durban
331 [72], with the first model Mother and Child Unit attached to the Pollsmoor prison opening in
332 2011 [73]. The provision of a greater number of mother and baby units in South Africa has
333 been **observed, particularly** in the Gauteng province. As of December 2014, 16 female
334 correctional facilities out of a total of 22 located in Gauteng have been designed to
335 accommodate both children and their mothers [74].

337 **Theme Two: Food availability, adequacy and quality**

338 *Inadequate food allocation and poor nutrition for children*

339 Nutrition standards in SSA prisons are generally reported to be poor, and thus not only for
340 children imprisoned with their mothers. Generally, this involves the provision of one
341 primarily vegetarian meal per day [18]. Prisons systems generally do not allocate food to
342 children incarcerated with their mothers. Governments in Côte d'Ivoire, Zambia, Uganda and
343 Tanzania were specifically reported to not have an allocation for the care of children [23, 39,
344 44, 69]. In 2017, Muhangi et al. [62] reported that in Kenyan and Ugandan prison systems,
345 some allocations of financial resources for children were recorded.

346
347 Poor quality nutrition and inadequate provision of food for children incarcerated with their
348 mothers was reported in Benin, Cameroon, Chad, Ghana, Kenya, Malawi, Mali,
349 Mozambique, Nigeria, Sierra Leone, Tanzania, Uganda, Zambia and Zimbabwe [33–35, 41–
350 43, 49–51, 57, 58, 71, 75]. In 2011, Todrys and Amon underscored how inadequate nutrition
351 is a serious problem for pregnant women and women with children in Zambian prisons. A
352 Zambian prison officer commented;

353 *“...I get no budget for the children’s food, they must eat their mothers’ food.*

354 *They are hungry a lot...”*

355
356 Incarcerated mothers were documented as sharing their allocation of food with their children
357 in prisons located in Cameroon, Chad, Côte d'Ivoire, Ghana, Malawi, Mozambique, Senegal,
358 Sierra Leone, Uganda, Zambia and Zimbabwe [9, 32–34, 41, 42, 44, 46, 47, 49–51, 57, 58,
359 60, 71]. A Zambian mother commented;

64
65

360 *“...My child is not considered for food—I give my share to the baby (beans and*
361 *kapenta [sardine]) we eat once a day. The baby has started losing weight and has*
362 *resorted to breast milk because the maize meal is not appetizing...”*[46]

363 A prison officer corroborated this statement during an interview;

364 *“...Yes, we do not provide food for children but the mother shares her portion*
365 *with the child...”* [37]

366 Conflicting reports between prison officers and women prisoners were also documented by
367 Malambo in 2016 [37] where Zambian prison officers reported extra provision of rice to
368 breastfeeding mothers and children. Female prisoners in this study denied this. With regard to
369 the provision of adequate protein in the diet, one mother in a Zimbabwean prison
370 commented;

371 *“...Meat is only part of the diet on important occasions such as the Prisons Day*
372 *Commemoration...”* [33].

373
374 Contrary to the **World Health Organization** (WHO)/UNICEF guidelines [76] on exclusive
375 breastfeeding for the first six months, in Zimbabwe it was reported that regardless of age, all
376 incarcerated children were required to consume non-breast milk foods as early as possible, to
377 compensate for infrequent and inadequate breastfeeding resulting from their mother’s prison
378 work routine [33]. A 2013 newspaper account in Uganda reported that at Moroto prison,
379 whilst NGOs provided food for children, the majority of incarcerated children were still
380 dependent on their mothers’ milk [70]. A mother expressed the inadequacy of food as
381 follows:

382 *“...Sometimes our babies go without food. They suckle from morning to*
383 *evening...”* [70]

384 For incarcerated mothers unable to breastfeed in Zambia, no baby formula was available [57].

385 A prison officer in Zimbabwe commented;

386 *“...The prison tries as much as possible to provide baby food to the children*
387 *living with their mothers, and some well-wishers have stepped in to supply the*
388 *food, but it quickly runs out and there is a general shortage. In some cases, the*
389 *mothers feed on their babies' food because they are also starving...”* [50].

390

391 In contrast, and indicating some improvement in nutrition provision and standards, Ethiopian,
392 Kenyan, Namibian and South African prisons were reported to provide additional food for
393 nursing mothers and their children [59, 61, 62, 72]. In Malawi, in 2013 it was reported that on
394 rare occasions soya flour was provided to children [43]. Children at the Luzira prison in
395 Uganda were provided with cow’s milk and vegetables from the prison farm [41, 62].
396 Variations in provision of special diets for nursing mothers and their children, and the
397 provision of food items such as bananas, fruits and baked goodies like biscuits and banana
398 bread to infants were also noted in South Africa [67]. Most encouraging was that in 2017,
399 Makau et al. [48] reported that out of all 35 female prisons in Kenya, eight prisons provided
400 children with three meals and at least two snacks per day.

401

402 **Theme Three: Provision of basic necessities**

403 *Inadequate bedding, linen and mosquito nets*

404 Provision of mosquito nets, sheets, cot beds and blankets for infants and children was
405 observed to be inadequate in Cameroon, Ethiopia, Kenya, Somalia, South Africa, Zambia,
406 and Zimbabwe [44, 48, 49, 51, 52, 56, 67]. In Kenya in 2016, incarcerated mothers were
407 reported to be sleeping on dusty and cold floors with their children [48]. In Sierra Leone in
408 2008, the lack of basic infection prevention and control practices for bedding was observed

409 by AdvocAid [51], which reported that mattresses and blankets were recycled among
410 prisoners, and were filthy and old. A mother incarcerated in Zimbabwe in 2015 described the
411 scarcity of warm blankets for infants;

412 “ ...You are forced to return to jail within 48 hours after giving birth at public
413 health facilities together with the newly born baby and that is when you get an
414 extra blanket for the baby...”[52].

415 416 ***Inadequate baby clothing, diapers, and baby toiletries***

417 The lack of provision of adequate clean and warm baby clothes, diapers and baby toiletries
418 (for example, baby wipes) was documented in Cameroon, Ethiopia, Kenya, Malawi,
419 Mozambique, Namibia, Sierra Leone, Somalia, South Africa, Tanzania, Zambia and
420 Zimbabwe [23, 36, 42, 44, 48, 51, 56, 58–61, 67, 72]. Reliance on donations by NGOs and
421 faith-based organisations was reported in Burundi, Côte d'Ivoire, Sierra Leone, South Africa,
422 Uganda, Zambia and Zimbabwe [22, 23, 36, 37, 51, 57, 67, 70]. Access was controlled by
423 prison staff, with limited supplies not equitably distributed to mothers per their identified
424 need, and with prison staff taking some supplies for their own families. In Zambia, although
425 NGOs and faith-based organisations provided basins, soap, baby clothes and milk powder,
426 there was no policy or systematic practice to ensure regular or equitable access to such
427 essentials [44]. Similarly in 2008, mothers in Sierra Leone indicated that receiving of these
428 supplies were at the discretion and “good-will” of prison officers [51]. In 2017, mothers
429 incarcerated in Cameroon complained that the supplied clothing for infants was of such poor
430 quality that it was often coarse, unhygienic and unsuitable [49]. Topp et al. in 2016 also
431 described how the lack of clean clothing was a daily struggle for the mothers and their
432 children in Zambian prisons [36]. In 2010, incarcerated mothers at the Pretoria Correctional
433 Centre in South Africa were documented as complaining of inadequate provision of baby

1 434 clothing given the harshness of winter temperatures, particularly at night [67]. The lack of
2 435 warm clothing for infants in Kenyan prisons was also documented in 2016 [48].
3
4

5 436

6
7 437 **Theme Four: Availability and accessibility of health services for incarcerated children.**
8

9
10 438 ***Inadequate prison health care for incarcerated children***
11

12 439 Statistics on doctor-to-prisoner ratio or nurse-to-prisoner ratio are not readily available in the
13
14 440 SSA region. Within the general population similar statistics pertaining to doctor-to-prisoner
15
16 441 ratios are also not easily obtainable. Availability and accessibility to paediatric health care in
17
18 442 prison were generally reported to be inadequate in the SSA region, and failing to meet
19
20 443 minimum human rights standards regionally and internationally [36, 47, 52, 53, 57, 66]. In
21
22 444 Zambia, for example, availability and accessibility of ante-natal care (ANC) was reported as
23
24 445 a challenge in 2011 [35], with pregnant prisoners commenting on the lack of medical
25
26 446 examination on entry to prison;
27
28
29
30

31 447 *“...I had no initial exam when I came to the facility, even though I am pregnant.*

32
33
34 448 *There is no special treatment for pregnant women, I take whatever I can...”[35]*
35

36 449 *“...I have not been to the clinic yet, no antenatal care. I went to the clinic once*
37
38
39 450 *but was told the nurses were not working. Since then I have not asked. I do not*
40
41 451 *feel well, lots of ups and downs...”[35].*
42
43

44 452

45
46 453 In some countries (for example, South Africa and Kenya), however, encouraging findings
47
48 454 were reported [48, 67, 73, 74]. In South Africa, the doctor-to-prisoner ratio was documented
49
50 455 as better than in free society. In 2010, Hesselink and Dastile [67] reported on sufficient
51
52 456 standards of medical care for incarcerated women and their children in South Africa
53
54 457 supported by prison clinics with qualified medical staff. Despite small samples of prisoners
55
56 458 interviewed in their study, the majority of incarcerated mothers indicated satisfaction with the
57
58
59
60
61
62
63
64
65

1 459 quality of prison health care. In South Africa, prison services collaborated with community
2
3 460 health care providers in the provision of health care services for the prevention of
4
5 461 communicable and non-communicable disease, pregnancy and post-partum care,
6
7 462 immunisations, and general health education and promotion for women and their babies.
8
9
10 463 Access to and uptake of immunisation programmes were favourably reported in Zambia,
11
12 464 albeit with some restrictions where mothers were not permitted to stay with their infants for
13
14 465 health education and promotion after immunization [44]. However, in Malawi in 2013, and in
15
16
17 466 Sierra Leone in 2008, incarcerated children were described as not taking advantage of key
18
19 467 under-five services such as immunizations against polio, TB, diphtheria and measles [43, 51].
20
21

22 468

23
24 469 Based on the data sources available, paediatric health care provision in prison in most SSA
25
26 470 countries was reported to be unavailable or lacking key critical resources such as essential
27
28
29 471 medicines, trained medical staff, and specialised care, and overwhelmingly affected by
30
31 472 barriers for women to access if available. These countries included Burundi, Cameroon,
32
33
34 473 Chad, Djibouti, Côte d'Ivoire, Ghana, Kenya, Madagascar, Malawi, Mozambique, Senegal,
35
36 474 Sierra Leone, Somalia, Uganda, Zambia and Zimbabwe [23, 36, 42–44, 47, 50–52, 54–58,
37
38
39 475 60, 62, 72]. In Côte d'Ivoire, NGOs sometimes financed prisoners' medical care [39]. A
40
41 476 mother in Zimbabwe said;

42
43
44 477 *“...Children suffered the most. They did not get good medical care in time. If you*
45
46 478 *asked for help for your child they would tell you hurtful things like ‘Prison has no*
47
48
49 479 *free medicine...”* [53]

50
51 480 Medicine stock-outs were described by prisoners in Zambia;

52
53
54 481 *“...my child had a high temperature and cough. She was taken to the clinic by*
55
56 482 *prison officers but there was no medicine for my baby...”* [57]

62
63
64
65

483 Access to health care provision in prisons in SSA was further worsened by restricted opening
484 hours for mothers and their children, controlled access by prison guards and negative staff
485 attitudes toward incarcerated children who were acutely or chronically ill in Chad, Cameroon,
486 Kenya, Senegal, Zambia and Zimbabwe [22, 36, 44, 47, 53, 54, 65]. In 2015, distressed
487 mothers in Zambian and Cameroon prisons complained of lengthy delays by prison staff to
488 respond to their children's acute medical needs and how they were denied access to the
489 prison clinic, even in the event of medical emergencies [44, 47]. Delays in medical
490 intervention for ill children and the consequent high risk of child mortality were reported in
491 Zimbabwe by Samakaya-Makarati [53] in 2003. In an interview with IRIN News [50], a
492 prison officer in Zimbabwe said;

493 *"...I have a feeling that most of the children who die here could have survived if*
494 *they enjoyed better health facilities... "* [50].

495 Paediatric deaths caused by delay in access to medical care and general medical neglect were
496 reported in Zambia and Zimbabwe in the years 2003, 2010 and 2015 [44, 53, 57]. A mother
497 in Zimbabwe said;

498 *"...When you ask, you are sometimes told... 'This is not home. 'You knew that*
499 *you wanted to look after your baby very well. Why did you commit a crime? After*
500 *two weeks my baby started to show deteriorating health, she couldn't eat*
501 *anything. She cried most of the time. I asked to see a doctor, they couldn't let me*
502 *see the doctor. So when my family came I asked them to take her...After about a*
503 *month the baby passed away... "[53].*

504 ***HIV prevention, treatment and care for incarcerated children***

505 In June 2016, the United Nations General Assembly agreed that ending AIDS by 2030
506 requires a **fast-track** response (*Political Declaration on HIV and AIDS: On the Fast Track to*

508 *Accelerating the Fight against HIV and to Ending the AIDS epidemic by 2030*) [77]]. Despite
509 this, HIV testing, TB screening and treatment coverage in SSA prisons **were** generally
510 reported to be weak, with limited or no provision of services for prevention of mother-to-
511 child transmission (PMTCT) of HIV in prisons in Angola, Ethiopia, Lesotho, Malawi,
512 Mozambique, Namibia, Swaziland, Tanzania (including Zanzibar), Zambia and Zimbabwe
513 [18, 32, 35]. This lack of sufficient PMTCT facilities was documented as contributing to
514 increased rates of mother-to-child transmission of HIV within prisons located in SSA
515 countries [32]. This is concerning given that these countries are among the most HIV-affected
516 countries globally. In Zimbabwe, the Network for People Living with AIDS (ZNNP+) in
517 2010 described how children already diagnosed with HIV would accompany their mothers
518 into prison [50]. The report stated

519 *“...Many HIV positive children are dying in prison because they are failing to*
520 *access treatment, and it is the responsibility of the government to make anti-*
521 *retroviral therapy accessible to them...”*[50].

522 South Africa represents a positive example where PMTCT services are scaled up and
523 available in prisons. Social work services and psychological services were also documented
524 to be available upon request or referrals after proper assessments [74].

526 **Discussion**

527 This scoping review represents a first step toward mapping available literature on the health
528 situation and unique rights violations of children incarcerated with their mothers in SSA
529 prisons. There is a paucity of published evidence on this vulnerable population. The
530 information found in this scoping review underscores the grave circumstances for infants and
531 young children incarcerated with their mothers. Incarcerated children are a hidden population
532 in SSA prisons who continue to be ignored in terms of prison resource allocation for basic

1 533 needs such as safe and clean sleeping and living areas, basic nutrition, ventilation and light,
2 534 adequate clothing, sanitary products, and pediatric medical care. The review highlights that
3
4 535 similar to adult prisoners in SSA, they are incarcerated in situations which do not comply
5
6
7 536 with international mandates in treaties ratified in nearly all SSA countries.
8

9 537
10
11 538 Prison conditions in the SSA region are harsh for all prisoners. Children like the general
12
13 539 prison population are adversely affected by lack of separate accommodation and individual
14
15 540 sleeping space, overcrowded cells, inadequate bedding, hygiene and sanitation, and lack of
16
17 541 clean and warm clothing, food and safe drinking water. Harsh prison environmental
18
19 542 conditions serve to exacerbate the spread of common respiratory and gastro-intestinal
20
21 543 conditions, as well as diseases such as TB and malaria. This review, which focused on the
22
23 544 past 18 years, underscores little improvement over time, with exception of South Africa.
24
25
26
27
28

29 545
30
31 546 Prison health for mothers and incarcerated children is generally dismissed or allocated a low
32
33 547 priority by SSA government policy makers and prison health programmers perhaps due to
34
35 548 their low numbers in comparison to the large male prison population [18]. International
36
37 549 decrees as previously mentioned mandate equivalence of care in prison, to that provided in
38
39 550 the community, and access to equitable health services for people in prisons free of charge
40
41 551 (the Mandela Rules, Rule 24.1 [10]. Most encouraging however, is that South Africa as key
42
43 552 forerunner in the region has significantly improved its prison conditions for women and their
44
45 553 children, alongside upscaling maternal and child health (MCH) care services in prisons [74].
46
47
48
49 554 Of note in other SSA countries, is the lack of recording of incarcerated babies and children,
50
51 555 including the rates of pregnancies in prisons, and poor provision of key SRH services for
52
53 556 women and their children. There is a reported lack of pediatric health care services in prisons,
54
55
56 557 and if services are available, barriers to access exist and result in low uptake. Medical care
57
58
59
60
61
62
63
64
65

1 558 provisions (with exception of those in South Africa) for women and their children were
2 559 documented as poor, and characterized by lack of essential medicines, frequent medicine
3
4 560 stockouts, negative staff attitudes toward the incarcerated children and their medical needs,
5
6
7 561 prison officers who are not health professionals controlling access to medical care, and
8
9 562 restricted uptake of incarcerated children to immunization programmes. The reported poor
10
11 563 provision of pediatric medical services and lack of access, often dictated by prison officials,
12
13 564 not medically trained, contributes to very poor child health and risk of child mortality whilst
14
15 565 incarcerated with their mothers in SSA. Infant deaths were reported in some countries (for
16
17 566 example Zambia, Zimbabwe), as consequence of medical neglect and denial of medical care.
18
19
20
21

22 567
23
24 568 Prisons in the SSA with exception of South Africa are however generally failing to address
25
26 569 PMTCT of HIV in prisons [[18]. This is despite the fact that AIDS and TB are among the
27
28 570 main causes of death in prisons, with prisoners five times more likely to be living with HIV
29
30 571 than adults in the general population [19]. Incarcerated women are at higher risk of acquiring
31
32 572 HIV, TB and other infections in prisons, than men, and also have a higher prevalence of HIV,
33
34 573 and an even higher prevalence than women living in the community [78]. This may result in a
35
36 574 higher proportion of children born in prisons being at risk of HIV infection compared to
37
38 575 children born in the community. The limited access for women (and their children) to ANC,
39
40 576 labour and delivery services and anti-retroviral treatment (ART) whilst incarcerated in SSA
41
42 577 poses a serious challenge to PMTCT of HIV. The inadequacy of PMTCT services in prisons
43
44 578 contributes to infants being at high risk of contracting HIV during pregnancy, delivery or
45
46 579 breastfeeding. Restricted access of infants to their mothers for feeding in some prisons (for
47
48 580 example Zimbabwe) and the lack of adherence to good infant feeding practices heightens risk
49
50 581 of transmission [33]. In resource-poor settings, when formula feeding is not a viable option,
51
52 582 women living with HIV are advised to exclusively breastfeed (rather than mixed feeding) in
53
54
55
56
57
58
59
60
61
62
63
64
65

1 583 the first six months [79, 80]. This was not the case in certain countries such as Zimbabwe
2 584 where mothers are required to work in prisons during the day, thus interrupting their infants'
3
4 585 access to breastmilk. In May 2017, the UN Commission on Crime Prevention and Criminal
5
6 586 Justice (CCPCJ), adopted a resolution [81] requesting Member States in close cooperation
7
8 587 with UNODC and other relevant United Nations entities and other relevant stakeholders, to
9
10 588 increase their capacity to eliminate mother-to-child transmission of HIV, and support HIV
11
12 589 prevention and treatment programming in prisons, particularly in countries with a high-
13
14 590 burden TB/HIV coinfection in the SSA region.
15
16
17
18
19
20

21 591
22 592 We recognise the limitations of this review centring on the relative lack of data sources with
23
24 593 only 27 countries represented. Strengths centre on the thoroughness of the review approach in
25
26 594 terms of its multi-layered strategies to locate all forms of information. The wide timespan of
27
28 595 the mapping exercise (18 years) with sporadic documentation of prison conditions makes it
29
30 596 difficult to establish whether the situation has improved or deteriorated. The gathering of
31
32 597 strategic information through surveillance, country situational assessments and routine
33
34 598 monitoring and evaluation, and investment in academic research in SSA prisons at country
35
36 599 level warrants improvement.
37

41 600

42 601 **Conclusions and recommendations**

43
44 602 This review highlights the grave situation of infants and children incarcerated with their
45
46 603 mothers in SSA prisons. While all prisoners in the region suffer from poor prison conditions,
47
48 604 children are particularly vulnerable to the health impact of these conditions. The reported
49
50 605 paediatric morbidity and mortality associated with such sub-standard prison conditions is
51
52 606 deeply concerning and in contravention of all international mandates for the rights of the
53
54 607 child and the right to health and standards of care. Imprisonment of women, particularly
55
56
57
58
59
60
61
62
63
64
65

608 pregnant women and women with children, should always be a last resort, and suitable non-
609 custodial alternatives should be made available whenever possible (Bangkok Rules) [13]. The
610 review further highlights the need for enhanced monitoring and evaluation of children’s
611 situation in prisons, along with increased donor and governmental resources allocation for
612 services to meet basic needs of incarcerated children and paediatric health care. In particular,
613 the documentation of children in prisons should be mandated for all countries so that their
614 presence is recorded and therefore the conditions of their incarceration could be reviewed.

616 **Abbreviations**

617	ACRWC	African Charter on the Rights and Welfare of the Child
618	ART	Anti-retroviral treatment

646 **Authors' contributions**

647 Both authors were involved in the study design, had full access to the data and analyses, and
648 interpreted the data, critically reviewed the manuscript and had full control, including final
649 responsibility for the decision to submit the paper for publication. Specifically; MCVH
650 adapted the scoping review method and protocol, assisted in screening of records, drafted the
651 literature review, the methods, discussion and conclusion, reviewed and submitted the
652 manuscript.

653 RMG conducted the search, assisted in screening of records, drafted the results, and reviewed
654 the manuscript.

#	Searches	Results								
1	Circumstantial children in prisons OR children accompanying their mothers in prisons OR Children imprisoned with their mothers OR children incarcerated with their mothers									
2.	Health services availability and accessibility OR availability of basic necessities OR availability of nutrition OR availability of HIV/IDS treatment, OR physical environment) AND Africa	197								

Five charted results not included in Table Two are Agomoh (2003), Vetten in Sarkin (2008), the African Union 52nd session (2012), the UNODC (2017) independent evaluation report in 10 SSA countries, and the review of literature conducted by Reid (2016) where there is a commentary on the status of penal institutions in Africa as a whole, with some SSA countries referred to. With these five, the total of records is 64. Further extensive detail on all records are documented in the **Supplemental Table**.
