

PROGRESS TOWARDS THE LISBON OBJECTIVES 2010 IN EDUCATION AND TRAINING

Education and training in Member States is improving slowly but steadily since 2000. The performance levels in Europe equal the best in the world. Progress is made in all of the five benchmark areas for 2010, apart from one on low achievers in reading. The benchmark on the increase of number of Mathematics, Science and Technology graduates in higher education was already achieved in 2005.

In 2008, there are still significant inequities in many education and training systems. Gender, age, social origin, poverty or migrant background often affect opportunity of certain vulnerable groups of population to obtain higher levels of education. Despite of all progress, there are almost 108 million of Europeans – about one third of the labour force - with a very low educational attainment (below upper secondary education).

Five EU benchmarks for 2010

Early school leavers
(% of 18-24 years old)

2000 2006 2007
Data source: Eurostat

Completion of upper
secondary education
(% of 20-24 years old)

2000 2006 2007
Data source: Eurostat

Lifelong learning of adults
(% of 25-64 years old)

2000 2006 2007
Data source: Eurostat

Low achievers in reading
(% of 15 years old)

2000 2003 2006
Data source: OECD/PISA 2000, 2003 and 2007

Number of graduates
in Maths, Science and
Technology (x1000)

2000 2005 2006
Data source: Eurostat

Education
and
Training

Low achievers in reading

Acquiring basic competences is essential for all citizens. Over one million out of the total of about 6 million of 15 years old in the EU are low performers in reading. In comparison to 2000, the EU performance in this area has even worsened by more than 10%.

Among the best performing countries, Denmark, Poland and especially Finland are even further improving their performance. Finland is the overall best performer with a share of less than 5% of low achievers, followed by Ireland and Estonia with shares below 15%.

EU benchmark for 2010: 20% fewer 15 years-old with poor reading skills

Percentage of pupils with reading literacy proficiency level 1 and lower on the PISA reading literacy scale, 2006

Early school leavers

One out of seven young persons aged 18 to 24 in the EU still leaves the education system with no more than lower secondary education and currently participates in no form of education and training. The high number of early school leavers is an obstacle to the development of a knowledge-based economy and a greater social cohesion. There was continuous improvement in recent years, but progress will need to be faster to reach the EU benchmark in 2010.

However, six Member States - the Czech Republic, Lithuania, Poland, Slovenia, Slovakia and Finland - have already shares of less than 10%. Moreover, among these countries, Poland, the Czech Republic and Finland have high performance and are even progressing further. Other countries like Malta and Portugal have considerably decreased their initially very high percentage of early school leavers.

EU benchmark for 2010: Reduce early school leavers to 10%

Share of 18-24 years old with only lower secondary education or less and not in education and training, 2007

Completion of upper secondary education

Full participation in the knowledge-based society requires that each individual is equipped with at least upper secondary education. However, the share of young people who have completed upper secondary education in the EU is below 80% and has only slightly improved since 2000.

Nine Member States currently exceed the EU benchmark for 2010 of 85% graduation. Moreover, six countries (the Czech Republic, Poland, Slovenia and Slovakia, also Norway and Croatia) perform above 90%. Some countries with relatively low completion rates, such as Portugal and Malta, have made considerable progress since 2000.

EU benchmark for 2010: Reach 85% having completed upper secondary education

Percentage of 20-24 years old with at least upper secondary education, 2007

Mathematics, Science and Technology graduates

A highly qualified workforce is crucial for competing successfully in the global knowledge-based economy. The number of Maths, Science & Technology graduates in the EU has increased since 2000 by more than 25%. The EU has thus already achieved the benchmark before 2010. More limited progress has been achieved as regards to correcting the imbalance between female and male graduates.

While Poland, Slovakia and Portugal have progressed most since 2000 with annual growth rates above 10%, three big countries - the UK, France and Poland - are increasing the EU average with high levels of performance and progress. Bulgaria, Estonia and Greece perform best as regards to the gender balance.

EU benchmark for 2010: 15% increase of Maths, Science and Technology graduates

Growth in the number of Math, Science and Technology graduates in 2000 – 2006, in %

Participation of adults in lifelong learning

Lifelong learning is fundamental, not only for the competitiveness and economic prosperity of the EU, but also for social inclusion, employability, active citizenship and personal fulfilment of people.

The percentage of adults (age 25 to 64) participating in education and training amounted to 9.7% in 2007 and is rather

stagnating during recent few years. The highest performers are the Nordic countries (Sweden, Denmark, Finland and Norway), as well as the UK, Slovenia and Austria, all of which have performance levels above the EU benchmark for 2010 and are still progressing. The performance of the Netherlands and Iceland are of similar high levels but progress has stopped.

EU benchmark for 2010: Increase of participation in lifelong learning to 12.5% of the adult population

Percentage of population aged 25-64 participating in education and training in the four weeks prior to the survey, 2007

Participation in pre-school day-care institutions

There is some evidence that participation in pre-primary education has a positive impact on performance during compulsory schooling, in particular for children coming from socio-economically disadvantaged family backgrounds. In 2006, 86.8 % of 4 years old children were enrolled in education. Between 2000 and 2006, enrolment levels increased by 4 percentage points. Up to 100% of 4 years old children participate in pre-primary education in Belgium, Italy,

France, Spain, Malta and Iceland. In seven other countries, the participation has increased by about 10 to 15 percentage points since 2000. Twelve countries have participation rates for 4 years old above the objective of 90% set by the Barcelona European Council in 2002.

Participation of 4 years old children in education, 2006

Educational level of population

The level of educational attainment of the working age population provides a good indication of the knowledge and skills available in the EU. Because there is evidence of a very close relationship between educational attainment levels and labour market participation and other social and economic factors, improving the educational attainment of the European population is one of the most important long term objectives of the EU.

The educational attainment of 15-64 years old Europeans has improved considerably since 2000. The share of the population with at most lower secondary education is down by 5.3%, and the share with higher education is up 3.6%.

The share of the population with high educational attainment varies between 9.9% in Romania and 29.7% in Cyprus. Ireland, Cyprus and Malta have experienced the strongest growth in this area.

Percentage of the population (age 15-64) with higher education, 2007

Investment in education and training

Investment in human capital through education and training is central for strengthening Europe's position in the knowledge economy and for increasing social cohesion. At present, Denmark, Sweden and Cyprus devote around 7% or more of their GDP into public investment in education. These are among the highest levels of public investment in education in the world.

Although private investment in education is increasing in the EU, it is only significant in 4 Member States (the United Kingdom, Germany, Cyprus and Slovakia). For these countries, private investment reaches up to 17%, still well behind Japan, Australia, the United States and Korea with percentages from 25% to 40% of the total investment in education.

Monitoring of progress in education and training

The Commission publishes, since 2004, annual “Progress reports” monitoring the performance and improvements in Europe in relation to the 2010 Lisbon objectives for education and training. The 2008 report is based on a coherent framework of 16 core indicators and 5 benchmarks

which were adopted by the Council (Education) in 2007. The progress reports are prepared by the Directorate-General for Education and Culture in close cooperation with Eurostat, CRELL Research Centre (JRC) and the Eurydice European Unit.

Country abbreviations

EU European Union

BE	Belgium	MT	Malta
BG	Bulgaria	NL	Netherlands
CZ	Czech Republic	AT	Austria
DK	Denmark	PL	Poland
DE	Germany	PT	Portugal
EE	Estonia	RO	Romania
