Scuola di Dottorato in Scienze Biologiche e Molecolari - XXIV Ciclo

Dipartimento di Scienze Biomolecolari e Biotecnologie

Corso di dottorato in Biologia Cellulare e Molecolare

STRUCTURAL INSIGHTS INTO INHIBITOR OF APOPTOSIS PROTEINS RECOGNITION BY PRO-APOPTOTIC COMPOUNDS

Federica Cossu

Matricola: R08186

Tutor: Prof. Martino Bolognesi

Coordinatore: Prof. Paolo Plevani

Anno Accademico 2010-2011

Contents

Part I

Abstract	1
State of the Art	2
Aim of the Project	17
Main Results	19
1. Biochemical and structural characterization of Smac-mimetics binding to the IAPs-BIR pockets and applications.....	20
2. Study of XIAP recognition by Smac/DIABLO	34
3. Design of TRAF2- or TAB1-mimetics to find novel therapies supporting Smac-mimetics.....	38
4. Production of cIAP1 and TRAF2 as crucial components of TNF- RSC for structural characterization.....	44
Conclusions and Future Prospects	49
Acknowledgments	53
References	54
