

# AWIN WELFARE ASSESSMENT PROTOCOLS

## What are the AWIN welfare assessment protocol?

It is a science-based welfare assessment method, built on animal-based indicators, including pain.

## What are they for?

It is intended to assess welfare of turkeys, sheep, goats, horses and donkeys on farm.

## Why use a two level approach strategy?

The AWIN welfare assessment protocols offer, as a first level, a quick screening, consisting of a selection of robust and feasible animal-based indicators. Depending on the outcome, a second level, consisting of a more comprehensive and in-depth assessment, may be recommended.
