

THE INFLUENCE OF MICROBIAL
MUTUALISTIC INTERACTIONS AND
BIOFILM FORMATION ON THE
PERFORMANCE OF MICROBIAL FUEL CELL

MOHAMMED AMIRUL ISLAM

DOCTOR OF PHILOSOPHY

UNIVERSITI MALAYSIA PAHANG

SUPERVISOR'S DECLARATION

We hereby declare that we have checked this thesis, and, in our opinion, this thesis is adequate in terms of scope and quality for the award of the degree of Doctor of Philosophy.

Full Name : MOHAMMED AMIRUL ISLAM

ID Number : PKC15010

Date : 13 June 2018

THE INFLUENCE OF MICROBIAL MUTUALISTIC INTERACTIONS AND
BIOFILM FORMATION ON THE PERFORMANCE MICROBIAL FUEL CELL

MOHAMMED AMIRUL ISLAM

Thesis submitted in fulfillment of the requirements
for the award of the degree of
Doctor of Philosophy

Faculty of Chemical and Natural Resources Engineering
UNIVERSITI MALAYSIA PAHANG

JUNE 2018

ACKNOWLEDGEMENTS

The research presented in this thesis has been carried out at the Faculty of Chemical and Natural Resources Engineering, Universiti Malaysia Pahang, Malaysia. The journey of my research would not be possible without help and support of a number of persons.

At first, I wish to my humble gratefulness and sincere thanks to honourable supervisor, Associate Professor Dr. Md. Maksudur Rahman Khan for his valuable support and guidance throughout the study. Indeed, it was utmost opportunity for me to get him as my main supervisor. He has always been able to keep on amazing me with his introspective thinking, ideas and insights. I would also like to give special thanks to my other supervisors, Dr. Chin Kui Cheng and Dr. Sabri Bin Muhammad for their inspiration and support.

I am highly grateful to the Universiti Malaysia Pahang (UMP), Malaysia, for funding this work under the grant number of GRS 150371 and RDU 140322. Apart from that, I would like to acknowledge the authority Panching Palm Oil Mill (FELDA), Kuantan, Pahang, Malaysia for their continuous support by giving me palm oil mill effluent and anaerobic sludge samples.

I would like to express my sincere gratitude to Dr. Abu Yousuf for his unconditional support in to write-up my thesis as well as research papers. A million thanks should go to Dr. Baranitharan Ethiraj for his kind helps and suggestions to conduct my experiments and to write-up my thesis. Some special thanks also goes to Dr. Ong Huei Ruey for helping me to do the optimization by Response surface Methodology. I also greatly appreciate to Mdm Hamidah Abdullah for correcting and polishing my thesis abstract (Malay version). Special thanks must be given to Mr. Ahasanul Karim, Mr Sheraj Ahmed, Mr. Kaykobad Md. Rezaul Karim, Mr. Woon Chee Wai for sharing their resource in the lab.

Lastly, I also want to thank to my parents and family for their continuous supports, encouragements and inspirations. It would be really tough to finish my study without their supports and devotions. On the *Insert* tab, the galleries include items that are designed to coordinate with the overall look of your document. You can use these galleries to insert tables, headers, footers, lists, cover pages, and other document building blocks. When you create pictures, charts, or diagrams, they also coordinate with the current look of your document.

CHAPTER 1 INTRODUCTION	1
1.1 Background	1
1.2 Problem statement	3
1.3 Objectives	4
1.4 Scope	5
1.5 Organization of the thesis	5
CHAPTER 2 LITERATURE REVIEW	7
2.1 The concept and working principles of MFCs	7
2.2 Substrates used in MFC	10
2.2.1 Synthetic wastewater	11
2.2.2 Brewery wastewater	11

2.2.3	Starch processing wastewater	12
2.2.4	POME	12
2.2.5	Inorganic and other simple substrates	14
2.3	Limitations of electrochemical reactions	14
2.3.1	Activation over-potentials	16
2.3.2	Concentration over-potentials	16
2.3.3	Ohmic voltage losses	16
2.4	Microbial electron transfer mechanism	18
2.4.1	Direct electron transfer	18
2.4.2	Mediated electron transfer	19
2.5	Biofilm formation in MFCs	21
2.5.1	Effect of biofilm formation on MFC performance	22
2.5.2	Existing methods of biofilm removal in bioreactors	26
2.6	Microbial community in MFCs	29
2.7	Microbial mutualistic interactions	34
2.8	Microbial synergistic interaction	35
2.8.1	Interaction modes between microorganisms	36
2.8.2	Molecular mechanisms of interactions in microbial consortia	36
2.8.2.1	Contact-independent interactions	37
2.8.2.2	Contact-dependent interactions	40
2.9	Mutualistic effects on MFC performance	40
2.10	Optimization of MFC performance	43
2.10.1	Effect of operational parameters	45
2.10.1.1	Effect of inoculum composition	46
2.10.1.2	Effect of time	46

2.10.1.3	Effect of pH	47
2.10.1.4	Effect of substrate concentration	47
2.10.2	Statistical models used in MFCs	48
2.10.3	Data generation	49
2.11	Summary	51
CHAPTER 3 METHODOLOGY		53
3.1	Inoculum screening and time-course biofilm analysis	54
3.1.1	Sampling	54
3.1.2	Wastewater characterization	54
3.1.2.1	COD measurement	54
3.1.2.2	BOD measurement	55
3.1.2.3	Total solids	55
3.1.2.4	Total dissolved solids	56
3.1.2.5	Total suspended solids	57
3.1.2.6	Ammoniacal nitrogen	57
3.1.3	Sources of inoculums	58
3.1.4	Characterization of the microorganisms	58
3.1.4.1	Biolog GEN III analysis	58
3.1.4.2	16s rRNA analysis	59
3.1.4.3	Phylogenetic analysis:	60
3.1.5	Inoculum screening	60
3.1.6	Chemicals and raw materials	61
3.1.7	Electrode preparation	62

3.1.8	Membrane pre-treatment	62
3.1.9	MFC fabrication and operations	63
3.1.10	Measurements and analyses	66
3.1.11	COD removal efficiency	66
3.1.12	FESEM analysis	67
3.1.13	Cell viability count	68
3.1.14	Electrochemical impedance spectroscopy analysis	68
3.1.15	CV analysis	70
3.2	Microbial mutualistic interaction	71
3.2.1	MFC operation	71
3.2.2	Cell growth measurement	71
3.2.3	Metabolite analysis	71
3.2.4	DGGE analysis	72
3.2.5	Numerical and statistical analysis of DGGE	73
3.3	Optimization of MFC performance	73
3.3.1	MFC operation	73
3.3.2	RSM analysis	74
3.3.3	Experimental design and data analysis	75
3.3.4	Statistical analyses	75
 CHAPTER 4 CORRELATION OF MFC PERFORMANCE WITH TIME-COURSE BIOFILM FORMATION		77
4.1	Inoculum screening	77
4.1.1	Isolation and identification of bacteria	77
4.1.2	Evaluation of inoculum performance using U-tube MFC	77
4.2	Performance of MFCs using targeted pure culture microbes	80

4.3	Biofilm characterization	83
4.3.1	FESEM analysis	83
4.3.2	Cell viability count	86
4.3.3	EIS analysis	88
4.3.4	CV analysis	94
4.4	Biofilm revitalization	97
4.4.1	Mechanical method	97
4.4.2	Ultrasound-assisted method	100
4.4.3	Flow-induced method	105
4.5	Discussions	108
4.6	Summary	114
CHAPTER 5 EFFECT OF MICROBIAL INTERACTION ON MFC PERFORMANCE		116
5.1	Performance of MFCs	116
5.2	Electrochemical characterization	118
5.2.1	CV analysis	118
5.2.2	EIS analyses	122
5.3	Mechanism of synergistic interaction between <i>P. aeruginosa</i> and <i>K. variicola</i>	124
5.4	Discussions	129
5.5	Summary	133
CHAPTER 6 OPTIMIZATION OF MFC PERFORMANCE		135
6.1	Development of regression model analysis	135
6.2	Statistical analysis	140
6.3	Performance of MFC	142

6.3.1	Power density	142
6.3.2	COD removal efficiency	144
6.4	Discussion	146
6.5	Summary	149
CHAPTER 7 CONCLUSIONS AND RECOMMENDATIONS		151
7.1	Conclusions	151
7.2	Recommendations	153

LIST OF FIGURES

Figure 2.1	Functional principle of typical dual chamber microbial fuel cell (Schematic diagram)	8
Figure 2.2	Protein involved in DET mechanism especially for <i>G sulfurreducens</i> . This organism is capable of producing different types of c-type cytochromes for extracellular electron transfer (EET). However, among them, the role of certain cytochromes (OmcB and OmcZ) is clearly understood. The cytochromes OmcZ which is located to the electrode surface is associated with the cytochrome-based electron transfer mechanism while OmcB and pili are associated with distant electron transfer	10
Figure 2.3	Polarization curves for anode (E_{anode}) and cathode (E_{cathode}) with the possible over-potentials in function of the current. The three regions represent the potential losses in a MFC system, i.e. i) the region A represents the activation losses, ii) the region B represents the ohmic losses, and the region C represents the concentration losses	17
Figure 2.4	Different types of electron transfer mechanisms from microbes to electrode. The cells in the biofilm close to the electrode transfer electrons through the membrane bound cytochromes, whereas distant cells from the electrode could use a conductive pili network and electron shuttling mediators to transfer electrons from the cells to the electrode	19
Figure 2.5	Polarization curves of MFCs on different days of operation	23
Figure 2.6	Contribution of anode internal resistance of MFCs (R_s represents the solution resistance, R_{ct} represents the charge transfer resistance and R_d represents the diffusion resistance)	25

LIST OF SYMBOLS

x_1	Inoculum composition
x_2	Substrate pH
x_3	Operational time
x_4	Initial chemical oxygen demand (COD) of substrate
y_1	Power density of microbial fuel cell performances (W/m^3)
y_2	COD removal efficiency
F	Faraday's constant
h	Hour
I	Current
P	Power
R_Ω	Ohmic resistance
R_{ct}	Charge transfer resistance
R_{dif}	Diffusion resistance
V	Voltage
W	Watt
E_e^{anode}	Anode potential
$E_e^{cathode}$	Cathode potential
Σ_η^{anode}	Anode overpotential
$\Sigma_\eta^{cathode}$	Cathode overpotential
ΔE_η	Overpotential difference between anode and cathode
ΔE_Ω	Ohmic voltage losses
ΔE	Real cell voltage
b_i	Linear coefficient
b_o	Constant coefficient
b_{ii}	Quadric coefficient
b_{ij}	Interaction of coefficient, x_i, x_j coded values
Σ	Summation
