# ALLOCATION APPROACHES TO DEAL WITH THE CASCADING USE OF RESOURCES ALONG A WATER TREATMENT CHAIN

## *THE CASE OF THE RESOURCE FOOTPRINT OF SEWAGE SLUDGE VALORISATION IN THE NETHERLANDS*

Sophie Sfez, Steven De Meester, Siegfried Vlaeminck, Jo Dewulf

*SETAC Europe 24<sup>th</sup> LCA Symposium*

# OUTLINE

- Introduction
- A new approach towards wastewater treatment
- Application to a case
- Discussion & conclusions

# APPLICATION TO A CASE

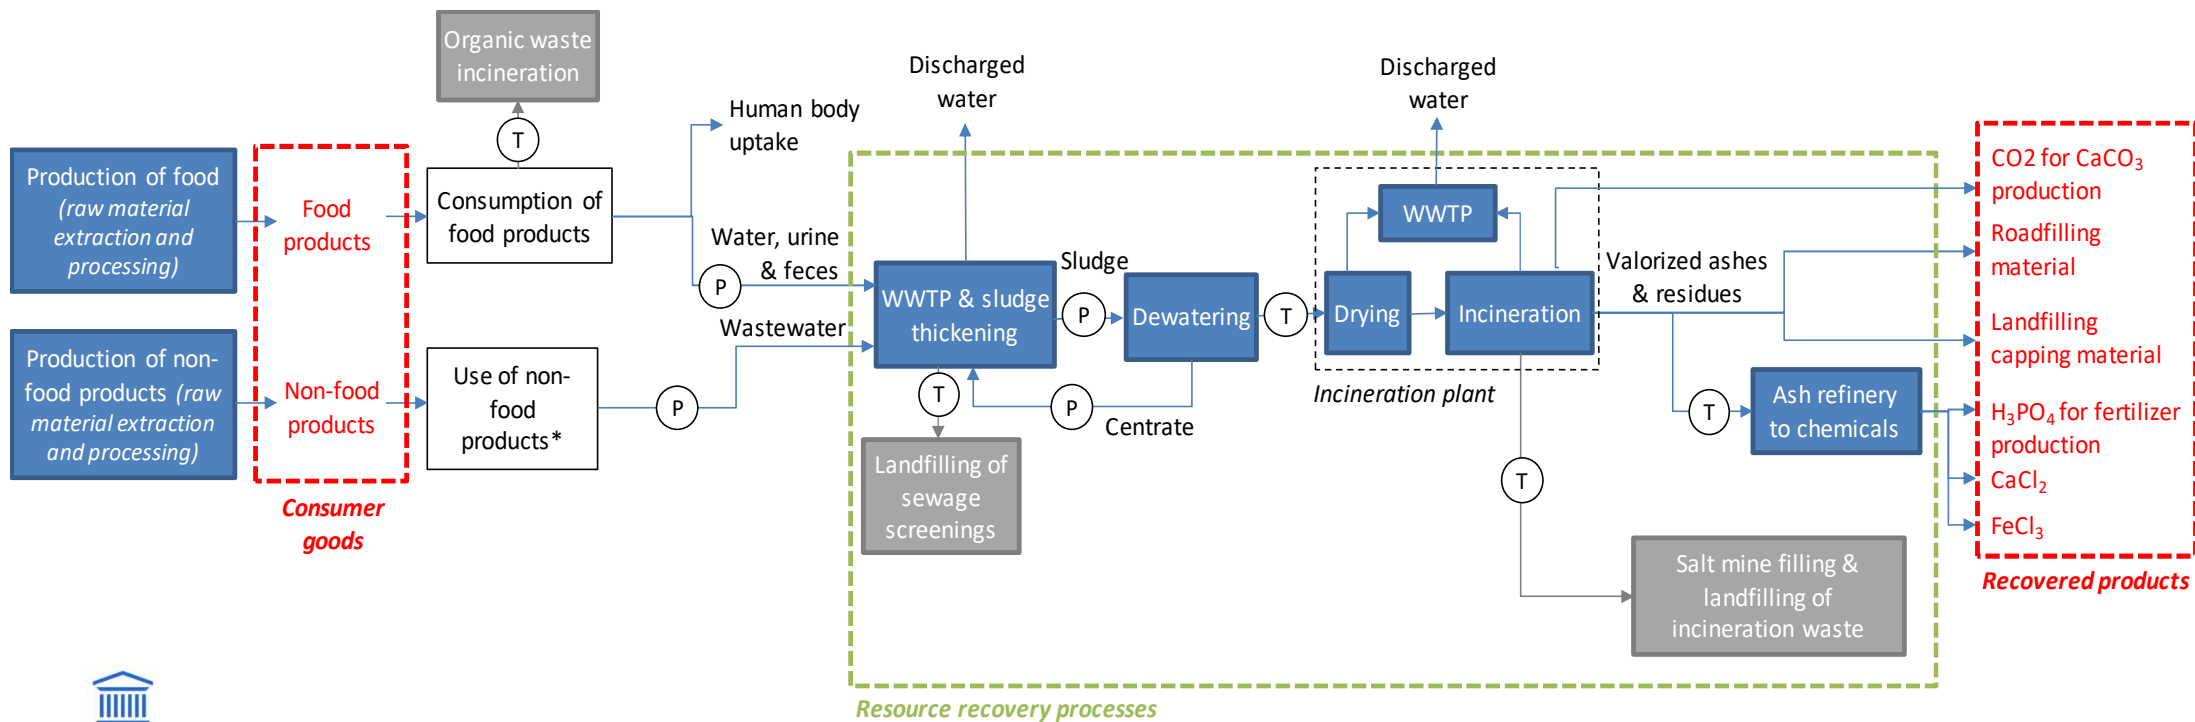

Wastewater treatment chain of Eindhoven - 680000 PE

# APPLICATION TO A CASE

## Baseline scenario

# APPLICATION TO A CASE

## Baseline scenario

- CO<sub>2</sub> for CaCO<sub>3</sub> production
- Roadfilling material
- Landfilling capping material
- H<sub>3</sub>PO<sub>4</sub> for fertilizer production
- CaCl<sub>2</sub>
- FeCl<sub>3</sub>

*Recovered products*

## Benchmark scenario

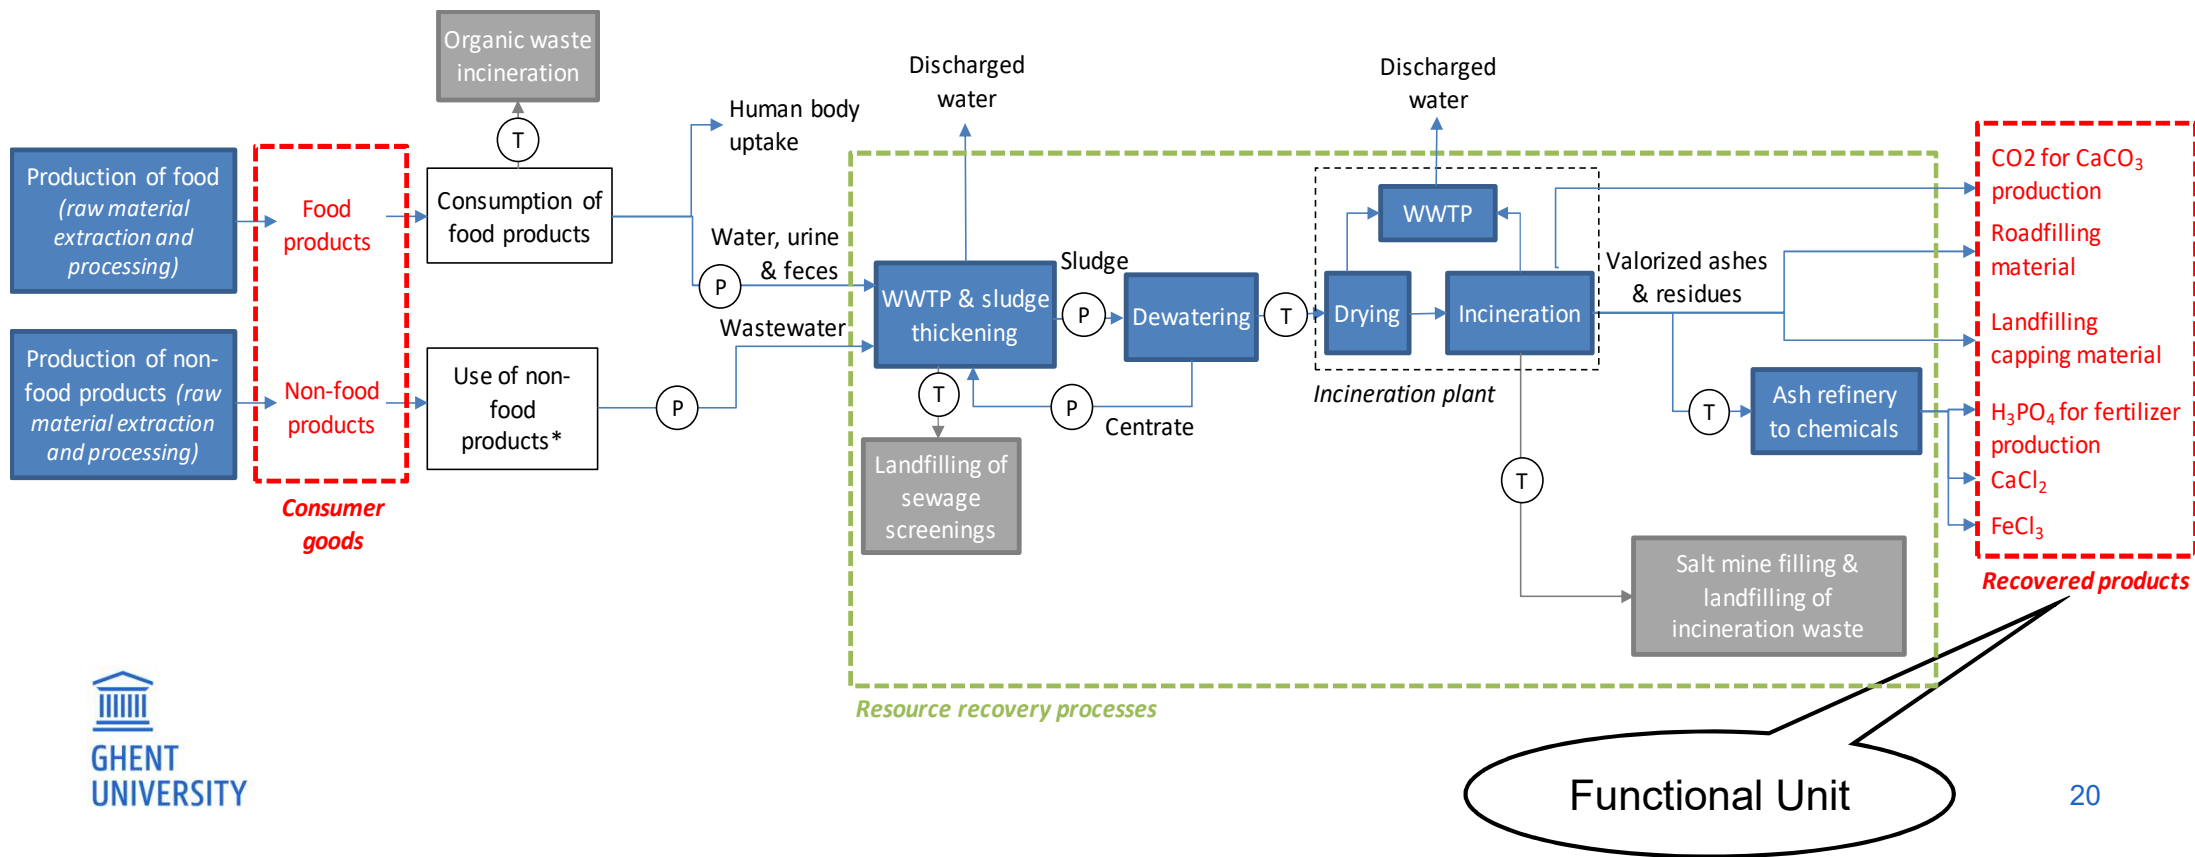

Industrial gases

Gravel

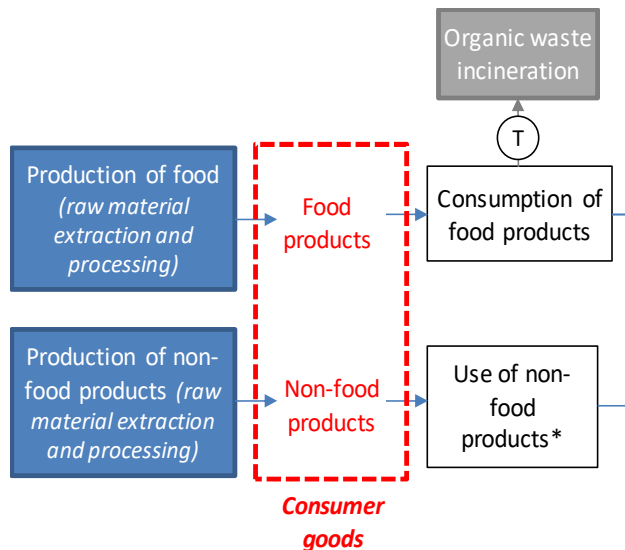

Bentonite clay

Virgin material-based chemical processes

# APPLICATION TO A CASE

# APPLICATION TO A CASE

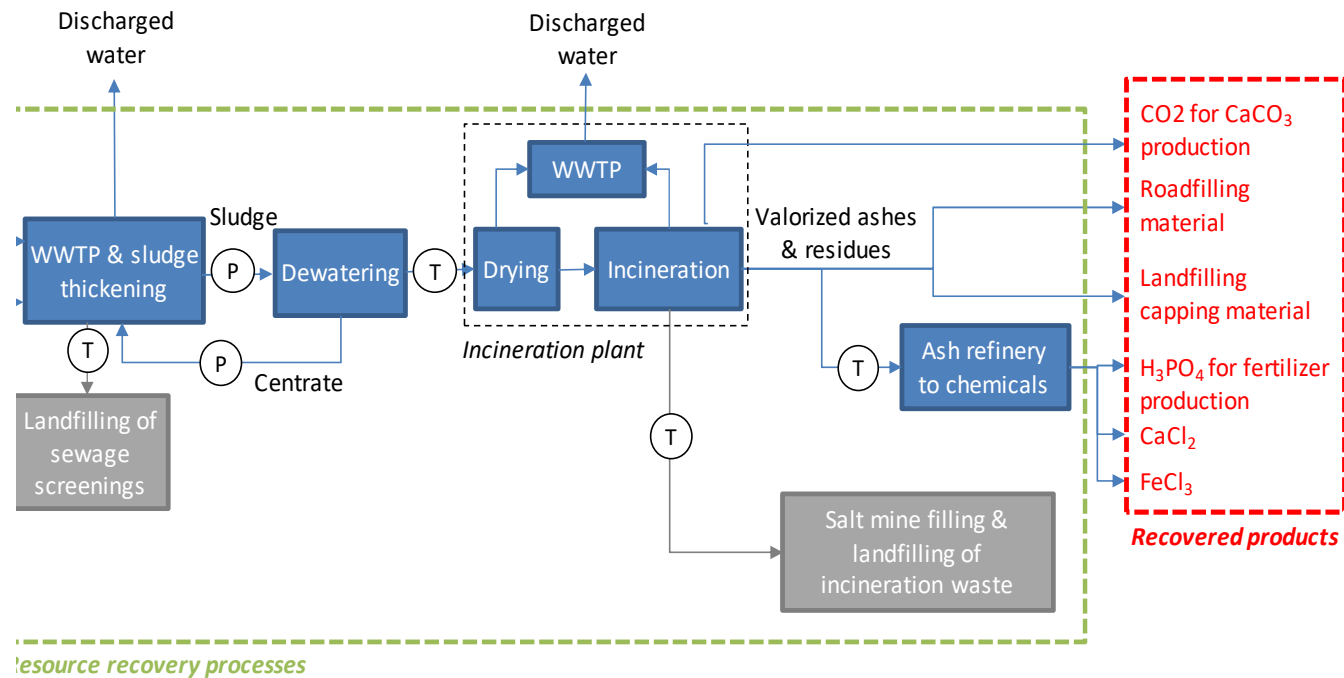

- Dutch National Consumption survey (2011)
- RIVM reports, PAN-European consumer survey on sustainability and washing habits
- Background processes: ecoinvent, Agri-footprint and Food-LCA databases

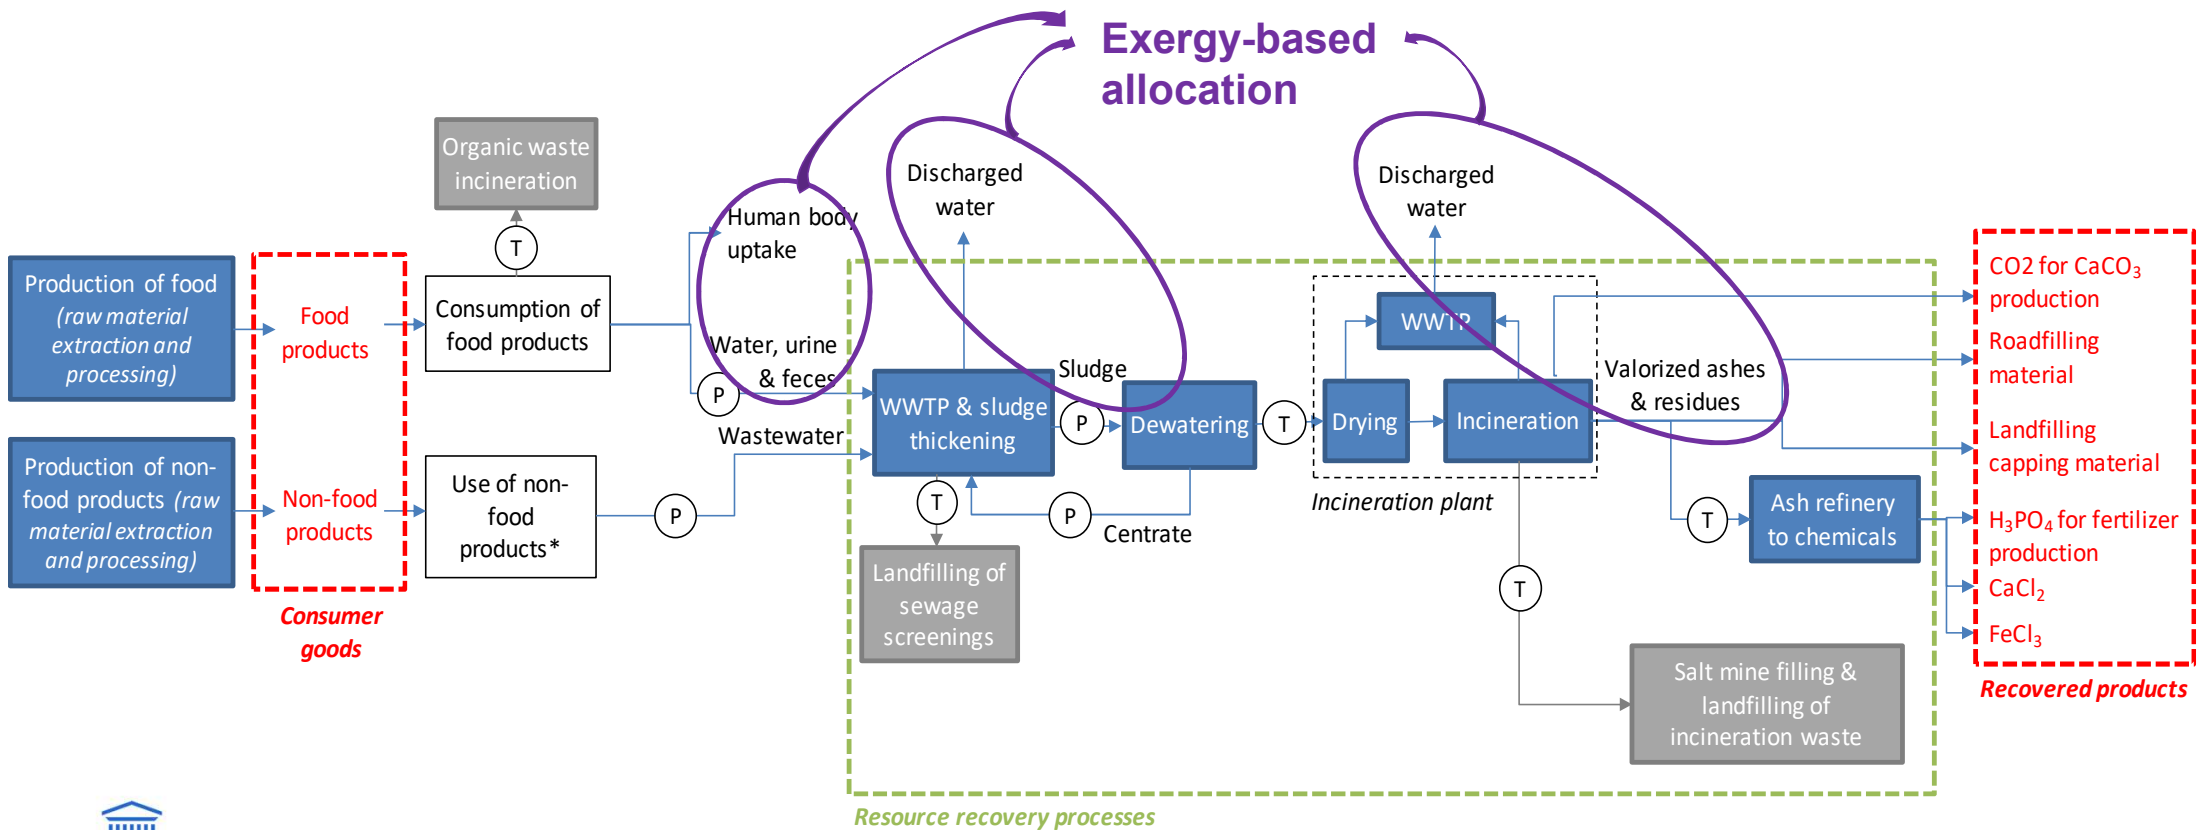

# APPLICATION TO A CASE

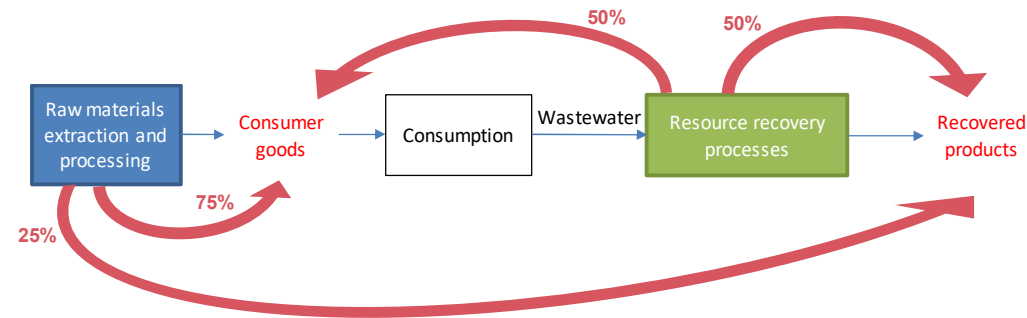

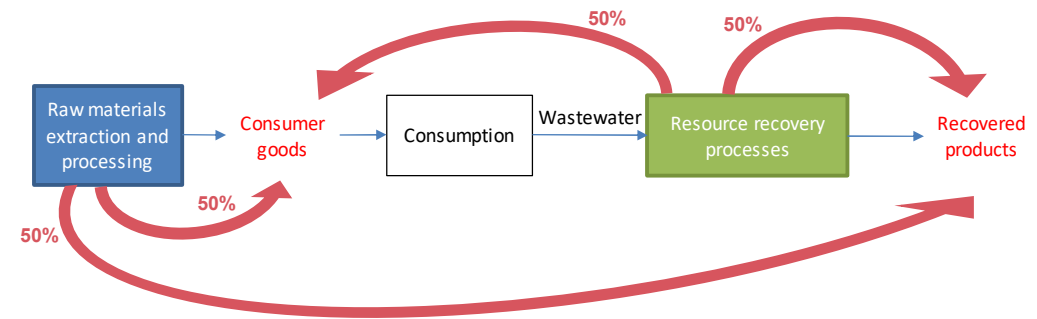

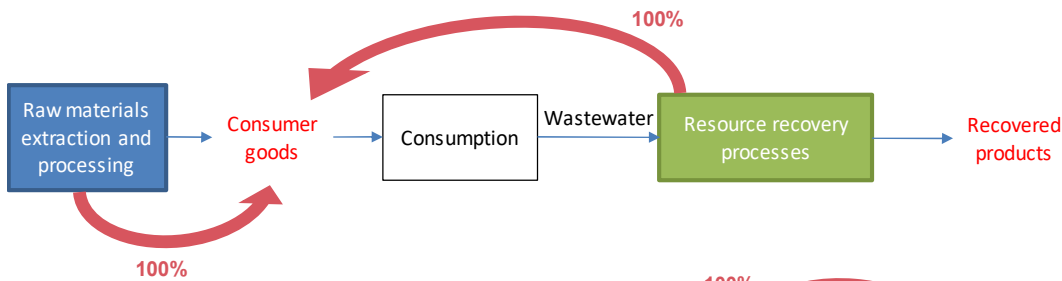

- Direct communications
- Sustainability report of Waterschap De Dommel and SNB
- EcoPhos process (P-Rex project)

# APPLICATION TO A CASE

# APPLICATION TO A CASE

# APPLICATION TO A CASE

## **Resource footprint**

→ Cumulative Exergy Extraction from the Natural Environment (CEENE; *Dewulf et al. 2007*)

# APPLICATION TO A CASE

## Results

- Production of non-food products consumed by households
- Production of food products consumed by households
- Wastewater treatment
- Incineration
- Ash refinery to chemicals
- Benchmark products

# APPLICATION TO A CASE

## Results

- Production of non-food products consumed by households
  - Production of food products consumed by households
  - Wastewater treatment
  - Incineration
  - Ash refinery to chemicals
  - Benchmark products
- 0:100 & 50:50: lower footprint than zero-burden assumption

# APPLICATION TO A CASE

## Results

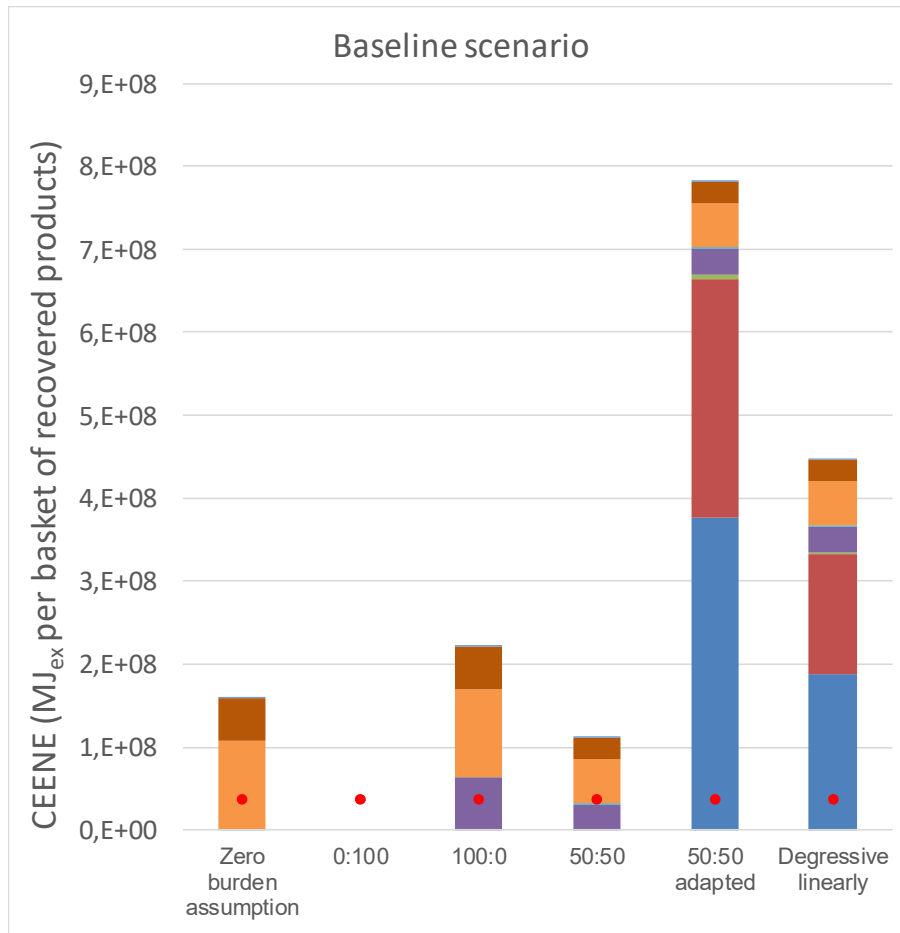

- Production of non-food products consumed by households
- Production of food products consumed by households
- Wastewater treatment
- Incineration
- Ash refinery to chemicals
- Benchmark products

- 0:100 & 50:50: lower footprint than zero-burden assumption
- 1<sup>st</sup> contributor: incineration

# APPLICATION TO A CASE

## Results

- Production of non-food products consumed by households
- Production of food products consumed by households
- Wastewater treatment
- Incineration
- Ash refinery to chemicals
- Benchmark products

- 0:100 & 50:50: lower footprint than zero-burden assumption
- 1<sup>st</sup> contributor: incineration
- Consumer goods become first contributors

# APPLICATION TO A CASE

## Results

- Production of non-food products consumed by households
- Production of food products consumed by households
- Wastewater treatment
- Incineration
- Ash refinery to chemicals
- Benchmark products

- 0:100 & 50:50: lower footprint than zero-burden assumption
- 1<sup>st</sup> contributor: incineration
- Consumer goods become first contributors
- Benchmark products (almost) always better

# DISCUSSION & CONCLUSIONS

- Practical challenges

- Only applicable in the case of a comparison between recovered and benchmark products

# DISCUSSION & CONCLUSIONS

- Practical challenges
  - Only applicable in the case of a comparison between recovered and benchmark products
  - Same approach should be applied to organic waste if not incinerated

# DISCUSSION & CONCLUSIONS

- Practical challenges
  - Only applicable in the case of a comparison between recovered and benchmark products
  - Same approach should be applied to organic waste if not incinerated
- The choice of the approach might be arbitrary but can be based on the principle of industrial ecology
  - Consumer goods and recovered products are dependent on each other
  - There is a “hierarchy of intent”: intended products & secondary resources

} → Degressive linearly

# DISCUSSION & CONCLUSIONS

- Practical challenges
  - Only applicable in the case of a comparison between recovered and benchmark products
  - Same approach should be applied to organic waste if not incinerated
- The choice of the approach might be arbitrary but can be based on the principle of industrial ecology
  - Consumer goods and recovered products are dependent on each other
  - There is a “hierarchy of intent”: intended products & secondary resources

} → Degressive linearly

**The proposed approach is not favourable for recovered products  
→ How to deal with it?**
