

**THE ETHICAL AND LEGAL CONCERNS OF THE USE OF GENETICALLY
MODIFIED (GM) FOODS IN SOUTH AFRICA**

Thiriloshani Padayachee

**A Research Report submitted to the Faculty of Health Science, University of
Witwatersrand, in partial fulfilment of the requirements for the Degree of Masters of
Science in Medicine in Bioethics and Health Law**

Johannesburg, 2016

Student No: 703691

CONTENTS	PAGE
DECLARATION	v
DEDICATION	vi
ABSTRACT	vii
ACKNOWLEDGEMENTS	viii
LIST OF TABLE	x
LIST OF ABBREVIATIONS	xi
1. CHAPTER ONE - INTRODUCTION AND LITERATURE REVIEW	1
1.1 General Introduction	1
1.2 Aim and Research Question	4
1.3 Study Objectives	4
1.4 Methods	4
1.5 The History and Background of GM Technologies	5
1.6 Modern Biotechnology	8
1.7 Food Safety and Food Security	12

2.	CHAPTER TWO – TRADITIONAL AND GM TECHNOLOGY FOR PLANT PROPAGATION: IT’S IMPACT ON AGRICULTURE AND INFLUENCE ON SOUTH AFRICAN FOOD PRODUCTS	15
2.1	Introduction	15
2.2	The use of GM Technologies for Plant Propagation vs. Traditional Propagation	
	Methods	16
2.3	The Effect of Genetic Modification on the Agricultural Environment	20
2.4	Identification of GM Products and Crops Available in South Africa	23
3.	CHAPTER THREE – AGRICULTURE IN 3RD WORLD COUNTRIES, SOCIETIES’ ACCEPTANCE OF GM TECHNOLOGY AND THE ADVANTAGES AND DISADVANTAGES OF GM PRODUCTS	27
3.1	Introduction	27
3.2	The Function of Agriculture in 3 rd World Countries	28
3.3	Societal Responsibility, Consumer Attitudes and Acceptance of GM Technologies	30
3.4	Advantages and Disadvantages of GM Technologies	33

4.	CHAPTER FOUR - THE ETHICAL CONCERNS OF THE DEVELOPMENT OF GM PRODUCTS	40
4.1	Introduction	40
4.2	The Natural versus the Unnatural Ethical Dilemma	41
4.3	The Moral Imperative of GM foods	43
4.4	GM Foods in relation to Hunger and Health	45
4.5	The Ethical Matrix and the Principles Approach	47
4.6	GM Innovators and Ethics	52
4.7	Ethical Views of Farmers and Producers	53
4.8	Ethical Concerns of Consumers	54
4.9	Summary	55
5.	CHAPTER FIVE – AN OVERREVIEW AND ANALYSIS OF THE SOUTH AFRICAN LAWS AND LABELLING OF GM FOODS	59
5.1	Introduction	59
5.2	International Influences on Governance and Regulation Design	60
5.3	South Africa’s Biotechnology and GMO Position	61
5.4	South African Regulations on GM Labelling	65

5.5	Discussion	68
6.	CHAPTER SIX – DISCUSSION AND CONCLUSION	70
7.	REFERENCES	75
8.	APPENDICES	86
	Appendix 1 Ethical Clearance	88

DECLARATION

I Thiriloshani Padayachee declare that this Research Report is my own, unaided work. It is being submitted for the Degree of Masters of Medicine: Bioethics and Health Law at the University of the Witwatersrand, Johannesburg. It has not been submitted before for any degree or examination at any other University.

Candidates Signature

DEDICATION

This Research Report is dedicated to Sedhoorajan Padayachee. I thank you for your love, compassion, patience, motivation, understanding, forbearance, unwavering support and encouragement. Without which this would not have been possible.

ABSTRACT

Worldwide genetically modified (GM) foods provide one of the major challenges facing the food industry in the twenty-first century. The safety of GM foods are being questioned by consumers, researchers and medical professionals as it is believed that these foods may pose a serious public health risk, especially for the young, aged, pregnant and immuno-compromised persons (Azadi and Ho, 2010). At present the safety of GM foods remains questionable mainly because of insufficient long term scientific data, and the vulnerability of the developing and developed countries to satisfy the food demands of their growing populations. There are already some 800 million people who do not have access to sufficient food to meet their needs. Malnutrition plays a significant role in half the nearly 12 million deaths each year in developing countries, of children under the age of five (Asante, 2008). Therefore, the need for increasing agricultural yields is of urgent concern in the entire developing world. A multitude of reasons are put forward to validate GM food production. The use of GM microbes does not necessarily raise alarms but there are considerable ethical concerns; concerns about “messaging with nature”; concerns about safety for human health, and concerns about environmental impact (Racovita, 2013). However, the technology offers opportunities to accelerate the efficiency and extent of further agricultural improvements by the transfer of genes conferring resistance to pests, disease, herbicides and environmental stress, as well as quality traits such as improved post-harvest storage, flavour, enhanced nutritional content and colour (Coles and Ladikas, 2013). The aim of the research project is to raise the ethical, legal and social issues about the use of GM foods in South Africa. The research will also highlight the ongoing debate in the areas of environmental protection, public perceptions and acceptance and ethical concerns.

ACKNOWLEDGEMENTS

The author wishes to express her sincere thanks and appreciation to the following people and institutions whose support, help and encouragement made this study possible:

Dr. Jillian Gardner my supervisor for her astuteness, constant exhortation, constructive criticism, time, diligence and guidance during the course of my research. I have grown from the formidable experience of this research and from the wealth of knowledge gained from working with you.

Prof Ames Dhai and the staff of the Steve Biko Centre for Bioethics at the University of Witwatersrand for their support and encouragement.

The Vaal University of Technology for their financial support and study leave.

Prof Raymond Mabuza and my Colleagues in the Faculty of Applied and Computer Sciences at the Vaal University of Technology for their support and encouragement.

Ms Zinhle Marrengane for her continued support and encouragement throughout my studies.

Tom for language editing and proof reading the report.

Tammy, Kamesh, Levard and Sayuri for their editorial assistance, words of encouragement, motivation and support.

Mr Prenaven Reddy for proof reading the report and for his continued support and encouragement.

My family and friends for their love, understanding and unwavering support throughout my studies.

My late parents Bob and Margaret Pillay for their inspiration and spiritual guidance.

God for giving me the strength and endurance to see my studies to finality.

LIST OF TABLES

Table One:	A list of household products which contain GM ingredients (Uzogara, 2000)	24
Table Two:	List of GM crops grown in South Africa and the districts where grown (Nicolaides, 2014)	25
Table Three:	Ethical Matrix Adapted from Mepham (2000) for GM Food using the Principles Approach	50

LIST OF ABBREVIATIONS

GM - Genetically Modified

GMO - Genetically Modified Organisms

DNA - Deoxy-Ribonucleic Acid

NCB - Nuffield Council of Bioethics

FAO - Food and Agricultural Organization

IPTS - Institute for Prospective Technology Studies

WHO - World Health Organisation

OEDC - Organisation for Economic Co-operation and Development

ICSU - International Council for Science

GURT - Gene Use Restriction Technology

AEBC - Agriculture and Environment Biotechnology Commission

SA - South Africa

ACC/SCN - Administrative Committee on Coordination /Subcommittee of Nutrition

IFPRI - International Food Policy Research Institute

WTO - World Trade Organisation

CBD - Convention on Biological Diversity

EU - European Union

DAFF - Department of Agriculture, Forestry and Fisheries

NBS - National Biotechnology Strategy

SABS - South African Bureau of Standards

EUFIC - European Food Information Council

IUCN - The World Conservation Union
