Forcing the Moment to Its Crisis: Thoughts on Pay-Per-View and the Perpetual Access Ideal

by **Patrick L. Carr** (Electronic & Continuing Resources Acquisitions Coordinator, Joyner Library, East Carolina University, Greenville, NC 27858-4353) <CARRP@ecu.edu>

Many in the library profession insist on the crucial importance of securing perpetual access rights for acquisitions in electronic formats. In a widely cited article, for example, **Jim Stemper** and **Susan Barribeau** assess the current environment for perpetual access and advocate that, when negotiating e-journal acquisitions, libraries “should consider making the lack of perpetual access rights a deal breaker.”¹ **Ross Atkinson** goes further, asserting that the inability to secure satisfactory perpetual access provisions represented “the greatest single failure of research libraries in the past decade.”² One outcome of such declarations has been a sentiment among librarians that, while it may not have a discernable impact on services to patrons, not attaining perpetual access provisions is nevertheless a “failure” — it offends the traditional ideal that libraries must preserve information for potential use in the future.

From such a perspective, there is little to recommend the pay-per-view (PPV) model. Here, a library creates an account with a content provider through which authenticated patrons can purchase articles at the library’s expense. Despite its payment, the library retains no ownership of the content. What’s more, the library lacks even the ability to provide other patrons with access: such rights are generally restricted to the patron who initiated the transaction and no one else. Therefore, PPV is an affront to the perpetual access ideal. It dismisses the concept of the library as what **Thomas H. Teper** has termed a “memory institution” focused on the long-term preservation.³ To play on **Teper**’s words, the library instead becomes akin to a random-access memory institution primarily committed to meeting patrons’ immediate needs without much concern for warehousing information.

But despite PPV’s lack of perpetual access provisions, the model has become a hot topic. For example, in addition to this special issue of *Against the Grain*, PPV was the subject of presentations at the 2009 ALA, NASIG, and the **Charleston Conference**.⁴

The reasons for the model’s appeal are easy to understand. Due in part to libraries’ widespread acquisitions of “big deal” publisher packages, patrons have come to expect quick and expansive access to journal content. However, budget cuts make it more difficult than ever to meet these expectations. Indeed, because of the large portion of expenditures required to pay for publisher packages, many

libraries are no longer able to make do with decreases in their monographic budgets and cancellations of individual subscriptions. Instead, they are being forced to consider breaking up publisher packages. If libraries opt to retain subscriptions just to selected journals within a package, there will be a major decrease in patrons’ access: they will continue to have access to individually subscribed journals but lose access to all of the publisher’s other journals. Through its radical disaggregation of the content being acquired — transitioning from the publisher’s largest unit of content, a “big deal” package, to its smallest unit of content, individual articles — PPV offers a solution whereby libraries can continue to provide a level of access that is comparable to the expansiveness of a package but at what is in many cases a significantly reduced cost.

But PPV is not without its problems — and I am not just referring to the model’s lack of perpetual access provisions. For example, **Paul Harwood** and **Albert Prior** report that, when the model was trialed in the United Kingdom, the ten participating libraries experienced increased administrative burdens and decreased fiscal control.⁵ Research that I conducted in the spring of 2009 suggests that these two problems are being experienced to a lesser extent by libraries in the United States.⁶ However, my research also showed that — while, in general, libraries that have implemented PPV have been pleased with the results — there are other problems, including financial trepidations that the model introduces among patrons and a lack of enthusiasm about and uptake of the model among publishers.

Time will reveal the extent to which the problems associated with PPV are resolved. However, even if PPV in its present form never becomes a dominant acquisition model, its arrival as a point of

focus within the profession remains important. It marks a decisive juncture, a point that — to paraphrase **T. S. Eliot** — forces the current moment in the profession to its crisis.⁷ Indeed, there is a growing disconnect between patrons’ expectations for immediate access to a broad range of content and the adequacy of budgets to meet those expectations through conventional means. PPV offers an unconventional possibility to help bridge the disconnect, but exploring this route means that librarians must compromise their ideals about perpetual access.

Has the time come for such compromises? For many, I suspect the answer may be yes.

Budget cuts are forcing librarians to make painful decisions, and, in this context, it seems sensible to explore all avenues for reducing e-resource costs without reducing access — including those that are at odds with the perpetual access ideal. PPV is an important example of such an avenue, but it is not unique. Other ways in which the rejection of the perpetual access ideal can enable libraries to maintain access while reducing costs include:

- cancelling subscriptions to journals with current issues available through full-text aggregators;
- downgrading journal subscriptions to levels with decreased ownership provisions;⁸ and
- discontinuing membership in archiving initiatives such as the **LOCKSS Alliance** and **PORTICO**.

Atkinson deemed such actions to be “failures,” and he is absolutely right. But the fact is that many libraries today are in fail-fail situations. Librarians might reason that it is better to face the possibility of failing anticipated patrons in the future than the certainty of failing real patrons in the present.

Perhaps history will be unkind to those who rebel against the perpetual access ideal. Perhaps decades from now libraries will not have changed much and librarians will sit at reference desks and in cataloging departments lamenting, “If only our precursors hadn’t been so reckless! Because they chose to sacrifice long-term access in favor of short-term savings, there is no affordable way to provide access to many categories of content that patrons need.” That is one possibility. Another possibility is that, in the future, libraries will be utterly transformed. Perhaps the need for many libraries today to secure perpetual access provisions to many categories of content will prove to be an outmoded ritual from what **Rick Anderson** has called the era of “information scarcity.”⁹ Even more than today, the future promises to be an era of information abundance. This does not mean that libraries can abdicate their roles as “memory institutions,” but, for many, it may lead to the conclusion that they can be more selective and less stringent about what they decide should be retained in perpetuity. Indeed, in this abundance, it seems probable that, if content is in demand, market forces will make it available at an affordable price.

But, of course, much of the preceding paragraph is speculative. What is certain is that budget cuts are forcing libraries to make difficult decisions about their collections. In this context, the PPV model is appealing, but it violates the ideal of perpetual access. Every library will need to determine the extent to which it compromises this ideal. Those that are

continued on page 16

more liberal in their compromises may enjoy short-term savings, but their lack of perpetual access provisions may subject them to perils in the future. In contrast, libraries that are uncompromising in their commitment to securing perpetual access provisions can rest assured that their collections will continue to be accessible by future generations. However, they will be investing in the status quo at a time when everything about libraries is changing. 🌸

Getting Our Feet Wet: One Library's Experience with Transactional Access

by **Ryan Weir** (Assistant Professor, Serials and Electronic Resources Librarian, University Libraries Murray State University) <ryan.weir@murraystate.edu>

and **Ashley Ireland** (Assistant Professor, Reference Librarian, University Libraries Murray State University) <Ashley.ireland@murraystate.edu>

Introduction/History:

Murray State University is a mid-sized regional institution located in rural western Kentucky. The university currently has an enrollment of approximately 11,000 and an FTE of 8383 for the fall semester. In 2005, following years of passive-reallocation of one-time purchase funds to serial holdings funds, **Murray State University Libraries** was forced to dramatically cut its journal holdings. For years prior, any journal requested by the faculty was purchased with no foresight into the budget growth needed to sustain the subscription. Thus, many of the titles cut in 2005 were used by few, but were relied upon by those who used them. Since 2005, journal prices have continued to increase, bringing **Murray State University Libraries** to the point of completely exhausting the holdings budget for the 2009-2010 fiscal year. While we are committed to not cutting journal access, we have come to the decision we must re-evaluate the current continuations budget and strategy for providing access to content. We also wanted to tap into the iTunes-model of selling items on the unit level rather than the entire entity. Part of this new strategy is the implementation of a transactional access program with **Science Direct (Elsevier)**.

Fall out of Cancellations

Though the 2005 cuts were entirely necessary, they were made with little to no consultation with the faculty who depended upon them. The administration of the Libraries did little to explain or justify such cuts, which were criticized harshly. These cuts occurred within the same fiscal year as a main floor renovation to the main library, which led some teaching faculty to believe that journals were cut to pay for new carpet and other aesthetic amenities. Such a dramatic cut with so little explanation left the libraries being viewed negatively and as having poor fiscal management skills. Due to the high cost of scientific materials specifically, items within those disciplines were hardest hit, and the relationship between the university libraries and the departments of the sciences were the most tumultuous.

In the few years since the 2005 journal titles cut, nearly all of the faculty within the university libraries has been replaced. Some of the journals that were cut were restored if required for accreditation, or held higher

priority over other titles which could be cut. Though the collaborative relationship between the libraries and those academic departments which were hardest hit by the journal cut has improved, there remains a lasting legacy that seems to cloud communication to this day. It is our mission to repair these past issues and to improve upon our relationships with the entire university community. It is also our mission to provide access to as much content as possible to support our students and faculty.

Research of Programs

Before deciding on which pay-per-view/transactional access program to implement, we set out to review the literature, send out emails to colleagues and listservs, and search publishers' sites to find available programs. These inquiries provided us with some information, and the response from listserv inquiries resulted in numerous other entities interested in our findings, as many libraries are in the same situation that we found ourselves.

Based on the information that we were able to acquire, we decided that **Science Direct Transactional Access** would be the best program for us at this point in time. We came to this conclusion for a variety of reasons, including: the content coverage, ease of use, negotiation ability for price due to the fact we had no online content with **Science Direct** at the time, and it was a program with which one of the authors had familiarity, as he had helped to investigate and implement at a previous institution and so was somewhat aware of the process.

Negotiation of Contract and Pricing

We made initial contact with **Science Direct** to clarify the differences between their various programs. From there we worked with our representative to establish which program best met our needs and allowed us to purchase articles at the lowest possible cost. Our decision to opt in to the transactional access program and to move our **Elsevier** journal subscriptions to print-plus-online allowed us to receive a big reduction in the cost of each article purchased through the program. Our journal costs did go up, but because it was and is our plan to transition as much of our print content to online in the near future, this decision made sense both practically and fiscally. The negotiation process on pricing was very easy and was ac-
