ABSTRACT

One of importance parameters that determine the performance of an aircraft is the characteristic of the propulsion system. In designing an aircraft that uses propellers as the propulsive device, the availability of characteristics such as thrust coefficient, power coefficient and efficiency, which changes with advance ratio, are important to the designer so that accurate decision can be made.

Previous student have design the propeller test stand that can be used in the wind tunnel to get the propeller characteristics. We continue this project starting with calibrating the thrust and torque measurement plates and then testing in the wind-tunnel for three different types of propellers. However, when we began testing the propeller in the wind-tunnel using the propeller test stand, the data logger malfunctioned.

Our advisor suggested that we have to reduce our scope of the testing to static condition. To accomplish this objective a new test stand was successfully designed and fabricated using facilities available in the Faculty of Mechanical Engineering's Workshop. The test stand was designed for Super Stock Type-R electric motor. The maximum rotational speed of the electric motor is 7000 rpm.

From the results data and the graph plotted, it shows that the thrust force is increase when the rotational speed of propeller is increase and the diameter of the propeller become larger.

TABLE OF CONTENTS

CONTENTS		PAGE
	PAGE TITLE	i
	ACKNOWLEDGEMENT	ii
	ABSTRACT	iii
	TABLE OF CONTENTS	iv
	LIST OF TABLES	vii
	LIST OF FIGURE	viii
	LIST OF ABBREVIATIONS	ix
CHAPTER I	INTRODUCTION	1
CHAPTER II	PRELIMINARY STUDY	
	2.1 Introduction Theory on Propeller testing	3
	2.2 Static Thrust	5
CHAPTER III	THE ORIGINAL TEST STAND	6
	3.1 Experiment Setup	7
	3.2 Calibration	9
	3.2.1 The Results on the Pure Thrust calibration	10

3.2.2	The Results on the Pure Torque calibration	11
3.3	Some Recommendation on Design Improvement for the Previous Test Stand	12
CHAPTER IV CONCEPTUAL OF THE NEW DESIGN		
4.1	Design Basic	14
4.1.1	Motor	14
4.1.2	Propeller	16
4.1.3	Power Supply	16
4.1.4	Expected Value of Thrust	17
4.2	Design concept	18
4.3	Design Improvement	19
CHAPTER V DESIGN DETAILS		
5.1	Detail Drawing	21
5.1.1	Preliminary design	22
5.1.2	Improvement design	24
5.2	Material	26
5.2.1	Aluminum Plate	26
5.2.2	Mild Steel Plate	26
5.2.3	Mild Steel Cylinder	26
5.2.4	Plywood	26
5.3	Fabrication	27
CHAPTER VI TESTING PROCEDURE
