

**ANTIOXIDANT AND ANTIMICROBIAL PROPERTIES OF
TWO LOCAL EDIBLE MUSHROOMS**

NOOR FARIZA BINTI MOHAMMAD FAUZI

**Final Year Project Report Submitted in Partial Fulfilment of the
Requirements for the Degree Bachelor of Science (Hons.)
Applied Chemistry in the Faculty of Applied Sciences
Universiti Teknologi MARA**

APRIL 2009

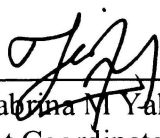

This Final Year Project Report entitled “**Antioxidant and Antimicrobial Properties of Two Local Edible Mushrooms**” was submitted by Noor Fariza binti Mohammad Fauzi, in partial fulfillment of the Requirements for the Degree Bachelor of Science (Hons.) Applied Chemistry, in the Faculty of Applied Sciences and was approved by

Assoc. Prof. Dr. Noriham Abdullah
Supervisor
B. Sc. (Hons.) Food Science and Technology
Faculty of Applied Science
Universiti Teknologi MARA
40450, Shah Alam
Selangor

Assoc. Prof. Dr. Zainon Mohd Noor
Co-supervisor
B. Sc. (Hons.) Biomolecular Science
Faculty of Applied Science
Universiti Teknologi MARA
40450, Shah Alam
Selangor

Cik Sabrina M Yahaya
Project Coordinator
B. Sc. (Hons.) Applied Chemistry
Faculty of Applied Science
Universiti Teknologi MARA
40450, Shah Alam
Selangor

Dr. Yusairie Mohd
Head of Programme
B. Sc. (Hons.) Applied Chemistry
Faculty of Applied Science
Universiti Teknologi MARA
40450, Shah Alam
Selangor

Date: 25 MAY 2009

ACKNOWLEDGEMENTS

Most importantly, I wish to thank to Allah S.W.T for guiding my path in life according to His will. Upon His bless, merciful and kindles, I finally completed my partial fulfillment of degree requirements, perfectly.

I would like to extend my most sincere appreciation and respect for my supervisor, Assoc. Prof. Dr. Noriham Abdullah whom deserves much gratitude for taking chances on an Applied Chemistry student with little knowledge of food science and taught me so much. Her diligent guidance and caring nature created a very productive, positive, and exciting atmosphere in which to pursue my degree requirements.

To my co-supervisor, Assoc. Prof. Dr. Zainon Mohd Noor, I feel thankful or her guides during antimicrobial test. Not to forget to few Masters students and lab assistants, who never fails spending their time in order to help me, thank you so much. I am indebted for all the valuable view, comment and cooperation given by them since beginning of this final year project.

No less gratitude is warranted for my course mate and best friend, Wan Elyn Amira for her helps and encouragement. Special thanks for all my friends, who were always willing to help whenever I am in need.

Special appreciation goes out to my beloved parents, Mr. Fauzi and Mrs. Fatimah and wonderful siblings, Faizal and Fateha, for their unending support, love, and belief in my abilities.

Last but not least, I would like to thank to everyone who has participated in helping me to accomplish my final year project.

Noor Fariza Mohammad Fauzi

ABSTRACT

ANTIOXIDANT AND ANTIMICROBIAL PROPERTIES OF TWO LOCAL EDIBLE MUSHROOMS

Antioxidant and antimicrobial activities of *Pleurotus ostreatus* and *Auricularia polytricha* extracts obtained with ethanol were investigated in this study. The study was aimed at determining the total phenolic content (TPC) of *P. ostreatus* and *A. polytricha*, the antioxidant activity (DPPH free radical-scavenging and FRAP – ferric reducing antioxidant power) and the antimicrobial activity by disc inhibition method. The TPC measured in $\mu\text{g GAE/mg}$ extract observed in *P. ostreatus* and *A. polytricha* were 28.58 ± 0.77 and 31.417 ± 0.75 respectively. Their antioxidant activities were low compared to standards BHA/BHT and ascorbic acid. *P. ostreatus* showed the stronger radical scavenging activity pattern. The reducing power of *P. ostreatus* was also higher than that of *A. polytricha*. Positive correlations were found between total phenolic content in the mushroom extracts and their antioxidant activities. Edible mushrooms may have potential as natural antioxidants. Both mushroom species showed moderate antibacterial activity against both Gram-negative and Gram-positive bacteria tested. The crude extract exhibited mild anticandidal activity on *Candida albicans*. However, *Aspergillus niger* has high resistance against both mushrooms species since no inhibition occurred. As conclusion, *P. ostreatus* showed higher antioxidant activity compared to *A. polytricha*. Meanwhile, *A. polytricha* showed better antimicrobial activity than *P. ostreatus*. From this study, both mushrooms species exhibit the antioxidant and antimicrobial properties, so the extracts could be suitable as antimicrobial and antioxidative agents in the food industry.
