EDUCATIONAL POLICY AS A BASIC INTELLECTUAL LEVEL OF INNOVATIVE POTENTIAL

Education and learning have an important role to play in responding development and transform youngpeoples' potential, creativity, talents, initiative and social responsibility to knowledge, skills, attitudes and values.

There is a need to bring together representatives of the public and private sectors, including youth organizations, companies, schools and universities should raise awarenessof the benefits of new forms learning awaking creativity and innovative skills. To achieve cooperation and joint action between all partners, we should pay particular attention tolocal and regional levels, minimization of resources and helping to provide morecoordinated programs for young people.

It is vital to use all the possible methods, and resources to introduce new forms of learningand its outcomes to public discourse, which could be encouraged by financial support,technical advice, revising training materials, networks, and databases [1, p. 121]. Посилання на рис??

Learning gives to young people new skills of team-work, adaptability and flexibility, self-confidence and intercultural capacities which will be developed to new personal and professional most needed benefits such as:

- leadership;
- people management and teamwork;
- innovation and entrepreneurship;
- communication;
- adaptability and flexibility;
- change management;
- project management;

- influencing;
- decision making;
- time management.
