

Social Robotic Donuts

Harvey Bewley, Laurens Boer

IxD Lab, IT University Copenhagen

In order to broaden the design space for social robot design, we created two air-actuated donut-shaped social robots – a small uniform silicone version and a more organic latex version. Our intent was to purposefully move away from typical human or animal form mimicry, focusing instead on elastic expression, ambiguous form and playful behaviours. Early studies show the robots provoking curious relationships with these contestational objects inviting new forms of intriguing communication and interaction.
