Preface

I. Purpose

Social and economic situation in Asian countries is changing drastically. Federal Democratic Republic of Nepal started a presidential system instead of regal government in 2008. Union of Myanmar also established a presidential system after military administration in 2011. It is expected to grow and get away from a least developed country. In The Kingdom of Thailand, national economy is developing in a comparatively smooth progress, but political system is unstable. In these countries, people's lives are very influenced by social changes. Children's lives are also suffering considerable impacts.

The purpose of this research is to clarify changes of Asian children's lives under the socio-economic condition changing drastically. We focus on three changes of children, that is body, culture and lifestyle. We investigate children's play, domestic works and growth as body change. We investigate children's value attitude and standard of conducts as cultural change. We investigate children's living hours, living practices, health habit and study habits as lifestyle change.

Guarantee of growth and development of child is the most important national issue. We hope the results of this research provide significant and useful materials for educational policy and platform in the both school and national importance.

This academic work was supported by JSPS KAKENHI Grant Number 25282222.

II. Research Organization

In this research, Japanese researchers became a core team and formulated an academic cooperative framework with researchers and specialists in Thailand, Nepal and Myanmar from 2013 to 2016.

Japanese research core is made up three researchers.

1. Professor Tetsuya Sagawa, Kanazawa University, project leader
2. Professor Dr. Shohei Kokudo, Kobe University
3. Associate professor Dr. Takahiro Nakano, Nagoya Gakuin University

Collaborative research organization in Thailand was established by the

advice and coordination of former associate professor Sukanya Panitchareornnam, Srinakharinwirot University. Japanese team was signed Memorandum of Understanding for Academic Cooperation between each Thai organization. Collaborative organizations in Thailand are as follows.

Institute of Physical Education, Sisaket Campus, organization leader

Institute of Physical Education, Udonthani Campus

Institute of Physical Education, Chiangmai Campus

Institute of Physical Education, Mahasarakham Campus

Institute of Physical Education, Chaiyaphum Campus

Collaborative research organization in Nepal was established by the advice and coordination of professor Dr. Bhimsen Devkota, Tribhuvan University. Japanese team was signed Memorandum of Understanding for Academic Cooperation between each Nepali organization. Collaborative organizations in Nepal are as follows.

Tribhuvan University

Pokhara University

Research team in Myanmar was established by an effort of Mr. Than Naing who was a former teacher training student at Kanazawa University. He is an alumnus of University for Development for National Races. Research team was built by alumni of the university.

III. Sharing Roles

Sharing roles between Japanese team and collaborative organizations are as follows. Japanese research core was responsible for 1) making a shared questionnaire, 2) determination of standard sample size, 3) supporting funds for surveys, 4) input data and cleaning, 5) data analysis and making statistical data book. Each collaborative organization was responsible for 1) questionnaire translation into national language, 2) selecting pilot schools, 3) request for cooperation to pilot schools, 4) data entry and utilization of survey results at schools.

IV. Questionnaire

Japanese team proposed and decided survey items from the aspect of three changes. In making a survey questionnaire, we chose items that can be compared with items of survey conducted before. Some new items are selected by reference of previous research. We conducted a pre-survey at some schools in Ubonratchathani province, Thailand in September 2013. The result of pre-survey was reflected the

final version. Question items were finally consisted 63 items. The questionnaire completed in English as standard edition and translated into each national language. It was adopted Thai version in Thailand, Nepali version in Nepal, Myanmar version in Myanmar and Japanese version in Japan. Please refer to each questionnaire.

V. Sample and Survey Fields

Student in the 5th grade of primary school and student in the 2nd grade of secondary school are selected as the respondent to a survey. Sample size was 200 students each sex and grade, totally 800 students per one standard unit. Educational system in Myanmar is different from other countries. We selected 1st grade of secondary school in Myanmar as 5th grade of primary school and 4th grade of secondary school as 2nd grade of secondary school on the ground of same years old.

In Thailand, 5 survey regions are chosen, which are Sisaket province, Chiangmai province, Udonthani province, Chiyaphum province and Mahasarakham Province. And two area is selected, which are provincial capital area and local area.

In Nepal, 2 regions are chosen, which are Kathmandu region and Pokhara region. And 3 area are selected, which are hill area, Terai area and mountain area. Kathmandu city and Pokhara city are hill area.

In Myanmar, 3 regions are chosen, which are Yangon division, Kayah State and Mon State. School in Yangon division is in urban area, and Schools in Khaya and Mon State are rural area.

In Japan, 3 regions are chosen, which are Kanazawa city in Ishikawa Prefecture, Kobe city in Hyogo prefecture and Tajimi city in Gifu prefecture. They are in urban area.

VI. Survey Conducted

In Thailand, 5 collaborative organizations conducted survey in the period from December 2013 to January 2014. Institute of Physical Education Sisaket Campus conducted survey at provincial capital and another local area in Sisaket province. Institute of Physical Education Udonthani Campus conducted survey at provincial capital and another local area in Udonthani province. Institute of Physical Education Chiangmai Campus conducted survey at provincial capital and another local area in Chiangmai province. Institute of Physical Education Mahasarakham Campus conducted survey at provincial capital in Mahasarakham province. Institute of Physical Education Chiyaphum Campus conducted survey at provincial capital in Chaiyaphum province.

In Nepal, Survey was conducted in central and western region in the period from December 2014 to January 2015. Tribhuvan University conducted surveys at hill area, Terai area and mountain area in Central region. Pokhara University conducted surveys at hill area and Terai area in Western region.

In Myanmar, Survey was conducted in Yangon division, Mon state and Kayah state in the period from October 2014 to December 2014. Each collaborative member of three areas conducted survey under coordination of Mr. Than Naing.

In Japan, Survey was conducted in Kanazawa city, Tajimi city and Kobe city in the period from November 2015 to February 2016. Kanazawa University conducted survey in Kanazawa city, Ishikawa prefecture. Nagoya Gakuin University conducted survey in Tajimi city, Gifu prefecture. Kobe University conducted survey in Kobe city, Hyogo prefecture. Kobe University could not conduct survey at secondary school under supervise of Kobe-city education board.

VII. Sample Collected

Survey data were inputted into Excel format at each organization and sent to Dr. Nakano at Nagoya Gakuin University. Dr. Nakano done data cleaning process for

analysis and sent back to each organization the data by SPSS format.

Sample of this survey is shown Table 1.

VIII. Data Analysis

Each collaborative research organization collected questionnaires and inputted data. All data inputted were gathered at Nagoya Gakuin University. Dr. Nakano took a data cleaning process and converted the data into SPSS format. Data formatted SPSS sent back to each collaborative research organization. Sagawa aggregated the data and edited a book as Statistical Data Book on Lifestyle, Health and Values of Asian Children.

IX. Research Outcomes and Utilization

In this academic project, the unified questionnaire survey was conducted in four Asian countries. From a result of this collaborative investigation, we made a statistical data book compiled four countries' data. This book was sent to all collaborative organizations. This statistical data book is very important and useful to understand the situation of children in survey years. We hope that a lot of students, teachers and educational officers read them at university library and use these books for understanding children and educational policymaking. And all raw data of four countries' surveys are shared by all organization for academic analysis. Researchers and graduate students will use for their academic works. It will be written a lot of papers by collaborative researchers. We are expected to advance the research on mutual change of children's body, culture and lifestyle. We, Japanese researcher also write a paper from these survey data.

We strongly hope that collaborative researchers of this projects will conduct a new survey in five or ten years later. If they use the unified or modified format of this questionnaire, they will be compared with our project results.
