Abstract

The problem of emotional distress of children and adolescents is one of the central problems that attracts the attention of parents, teachers and psychologists. A vivid manifestation of the emotional disadvantage of adolescents is a depressive state before passing the CSE and the USE. It is worth noting that depression in adolescents is not just a bad mood, but a serious emotional disorder that hinders its development, affects well-being and quality of life. Modern scientists, such as Gatsonis & Covacs (1989), Piug-Antich (1986), 1 D.N. Isaev (2000), in their studies of the depressed states state the facts that psychotic and endogenous forms of depression are more common for children than for adults. Brent (1993), 2 Robbins & Alessi (1985), 3 have identified the links between depression and suicidal tendencies in adolescence. In this paper, we consider the essence, causes and signs of depression in senior schoolchildren before passing the CSE.

Keywords

CSE, Depression, Depressive disorder, Late adolescence, Prevention
