Abstract

The article deals with the property rights of the individual at different levels: physiological, intellectual and spiritual. The alienation of the rights of intangible property was considered as one of the criteria required for its commercialization. In this research the intangible rights and alienation of material objects of the individual property were explored. Authors examined income alienation of objects from the perspective of the concomitant alienation of rights. In the article there are scientific methods: analysis, synthesis, abstraction and analogy. In the study of somatic alienation of rights a systematic approach and classification were applied by authors. We have identified types of somatic alienation of rights, as well as discussed the boundaries of somatic rights in different countries, which made it possible to draw conclusions on the possibility of commercializing somatic rights. In the transition to the information society alienation physiological level does not lose its relevance, but is transformed using new technologies.

Keywords

Alienation of property rights, Donation, Health, Intangible property, Transplantation
