Abstract

We prove the additivity of regular l -additive mappings $T: [0, +\infty) \rightarrow [0, +\infty)$ of a hereditary cone in the space of measurable functions on a measure space. Some examples are constructed of non- l -additive mappings T . The monotonicity of l -additive mappings $T: [0, +\infty) \rightarrow [0, +\infty)$ is established. The examples are constructed of nonmonotone d -additive mappings T . Let $(S, +)$ be a commutative cancellation semigroup. Given a mapping $T: [0, +\infty) \rightarrow S$, we prove the equivalence of additivity and l -additivity. It is shown that a strongly regular 2-homogeneous l -subadditive mapping T is subadditive. All results are new even in case $S = L^\infty +$. © 2014 Pleiades Publishing, Ltd.
