Abstract

© 2016 Taylor & Francis Group, London. The article is devoted to the conceptual apparatus formation as an important factor in order to develop professional communicative competence in the language of specialty. Mastering the language of specialty supposes a considerable stock of words related to the future professional activity (terminology), appropriate use of vocabulary, phonetic, and verbal intelligence. The artificial classification of concepts and terms is presented in the article for effective and efficient use in learning a second language. The significance of the conceptual apparatus in learning the language of specialty was proved by the experimental results.
