Abstract

© 2016 Taylor & Francis Group, London. The last decade is seen as a decade of profound transformations; it has become one of the most difficult periods in the history of Russian economy. Mechanical borrowing of foreign recipes and values could not solve the problem of economic growth and has created a serious threat to undermine the economic potential of the nation. Due to these circumstances, important changes took place in the sphere of theory as well. In particular, in economic science, there has been a resolute turn to study the processes of economic transformation. Actual problems of the theory, practice, and prospect of anti-recessionary regulation, reformation, and transformation of economy are discussed by scientists.
