

Treetips and targets for trees on slopes

C. Mattheck, K. Bethge, K. Weber, I. Tesari

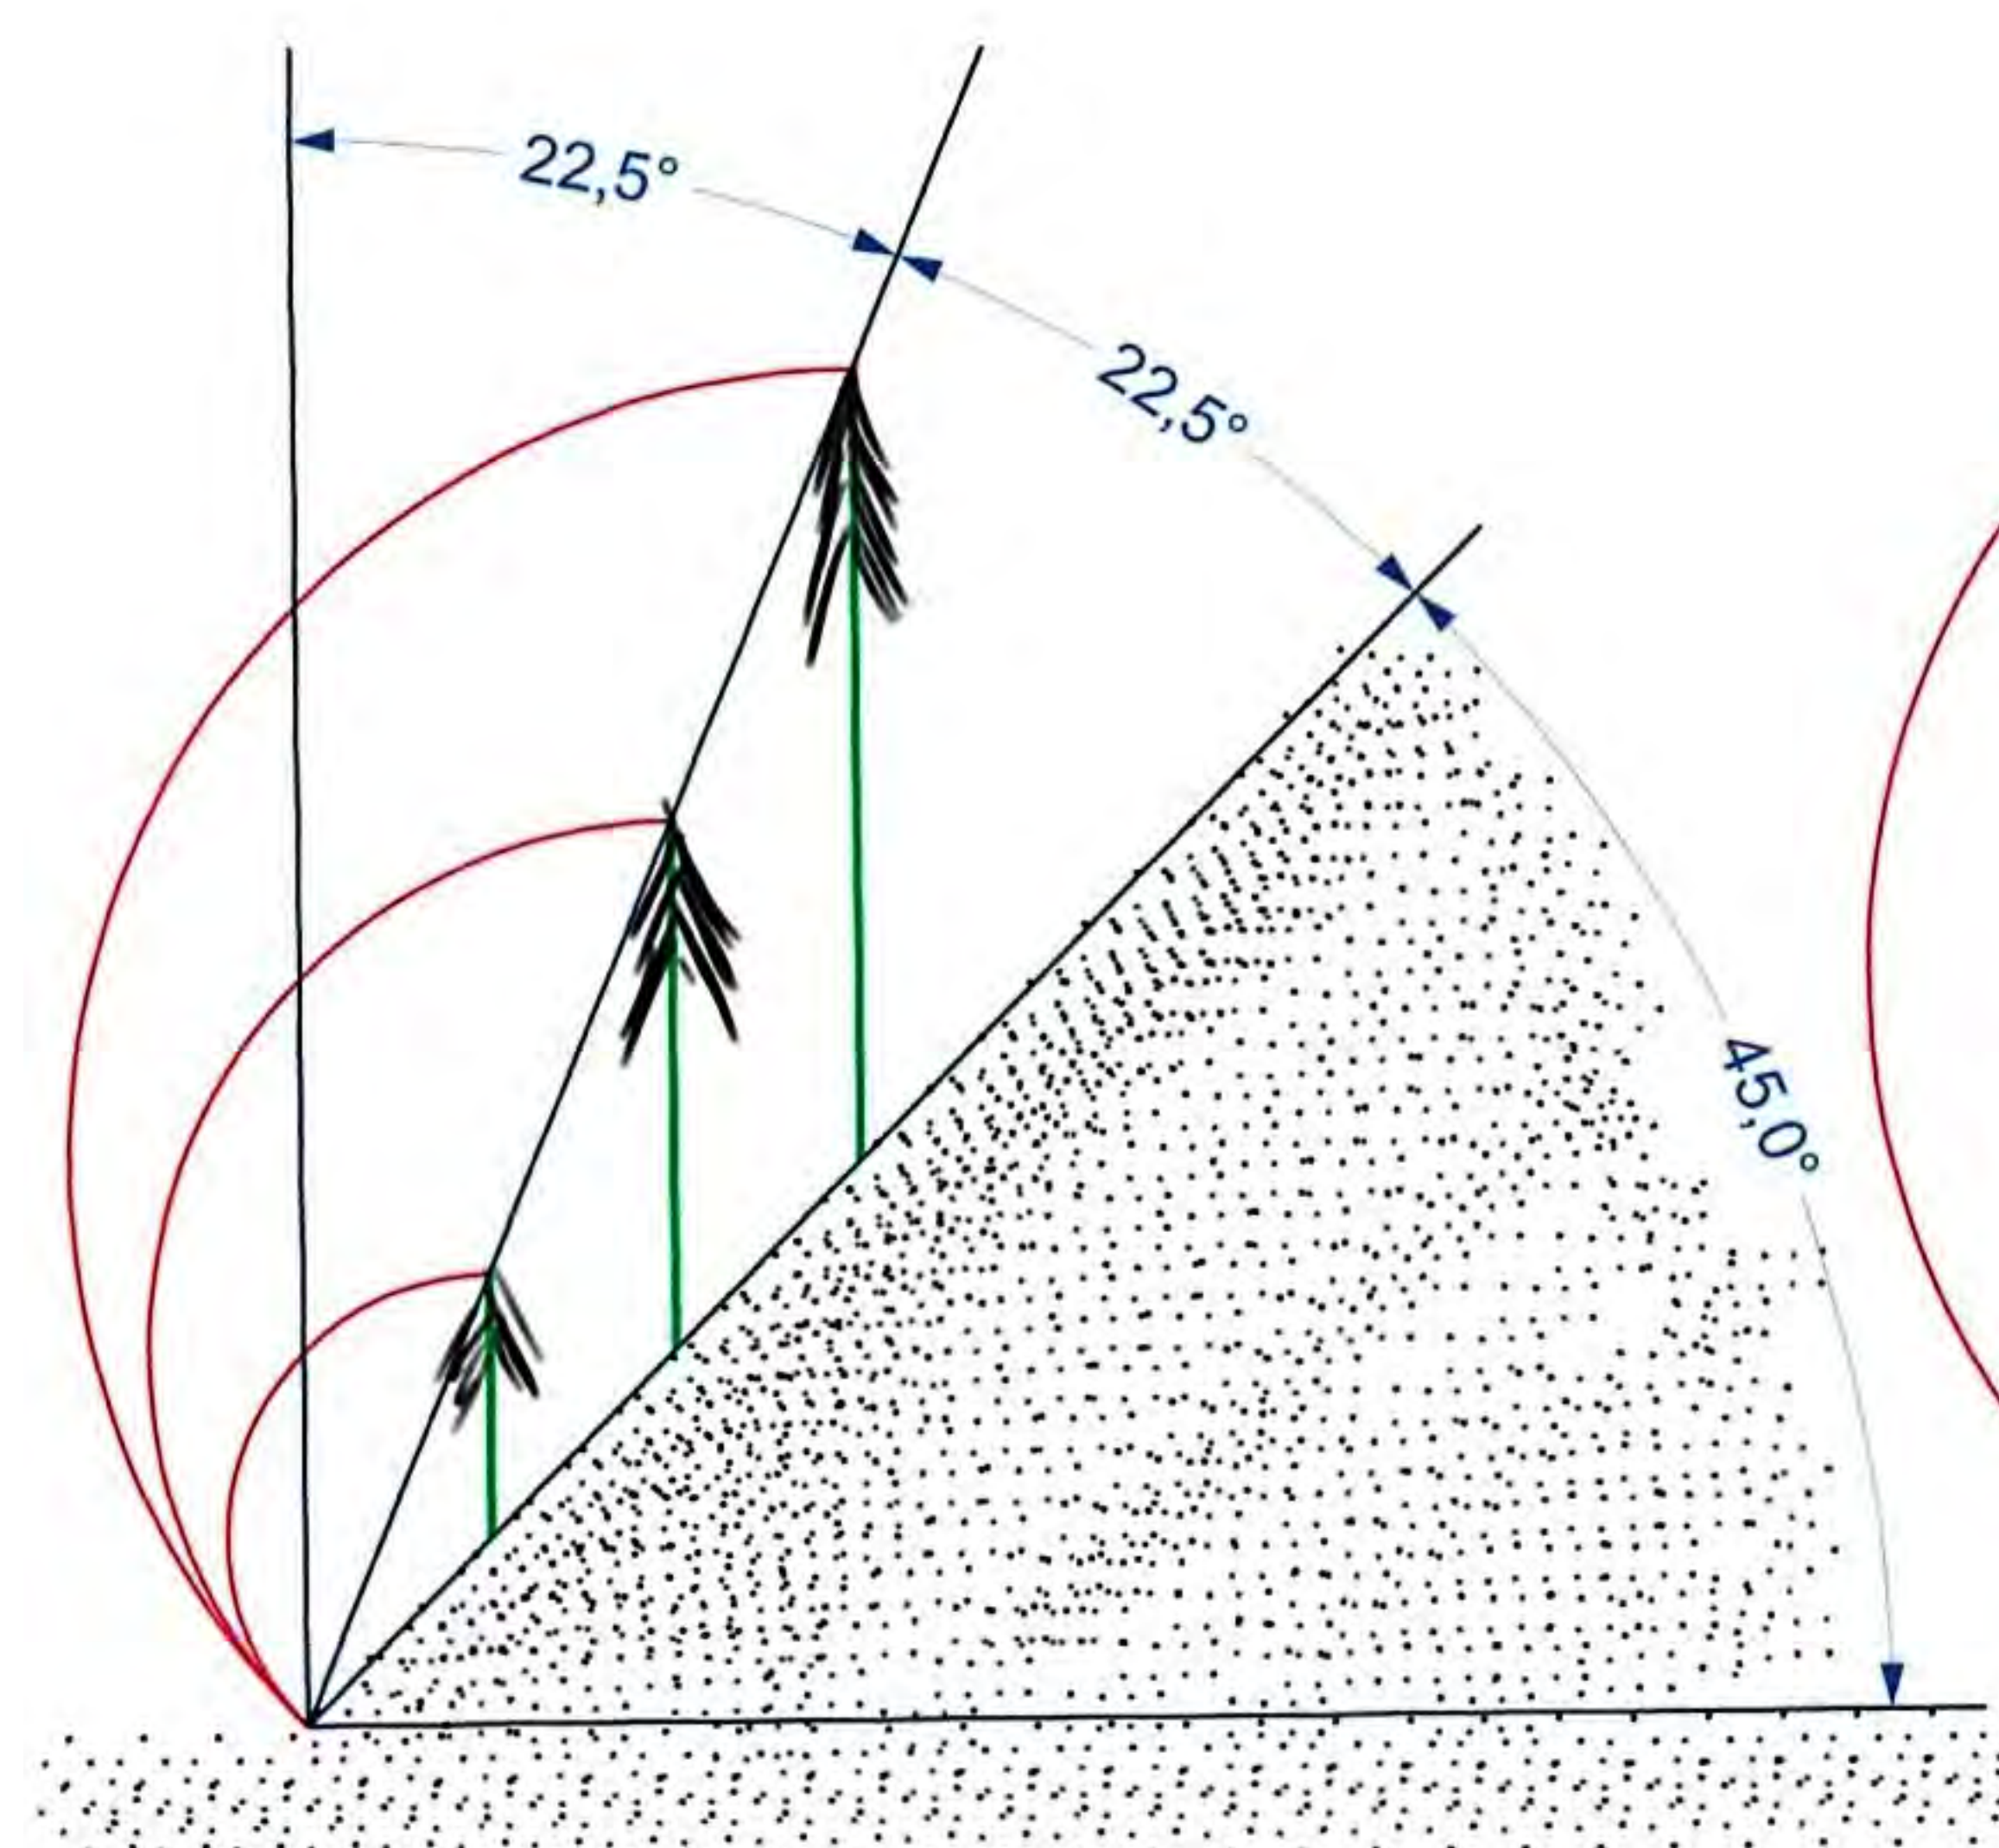

Slope angle: 0°

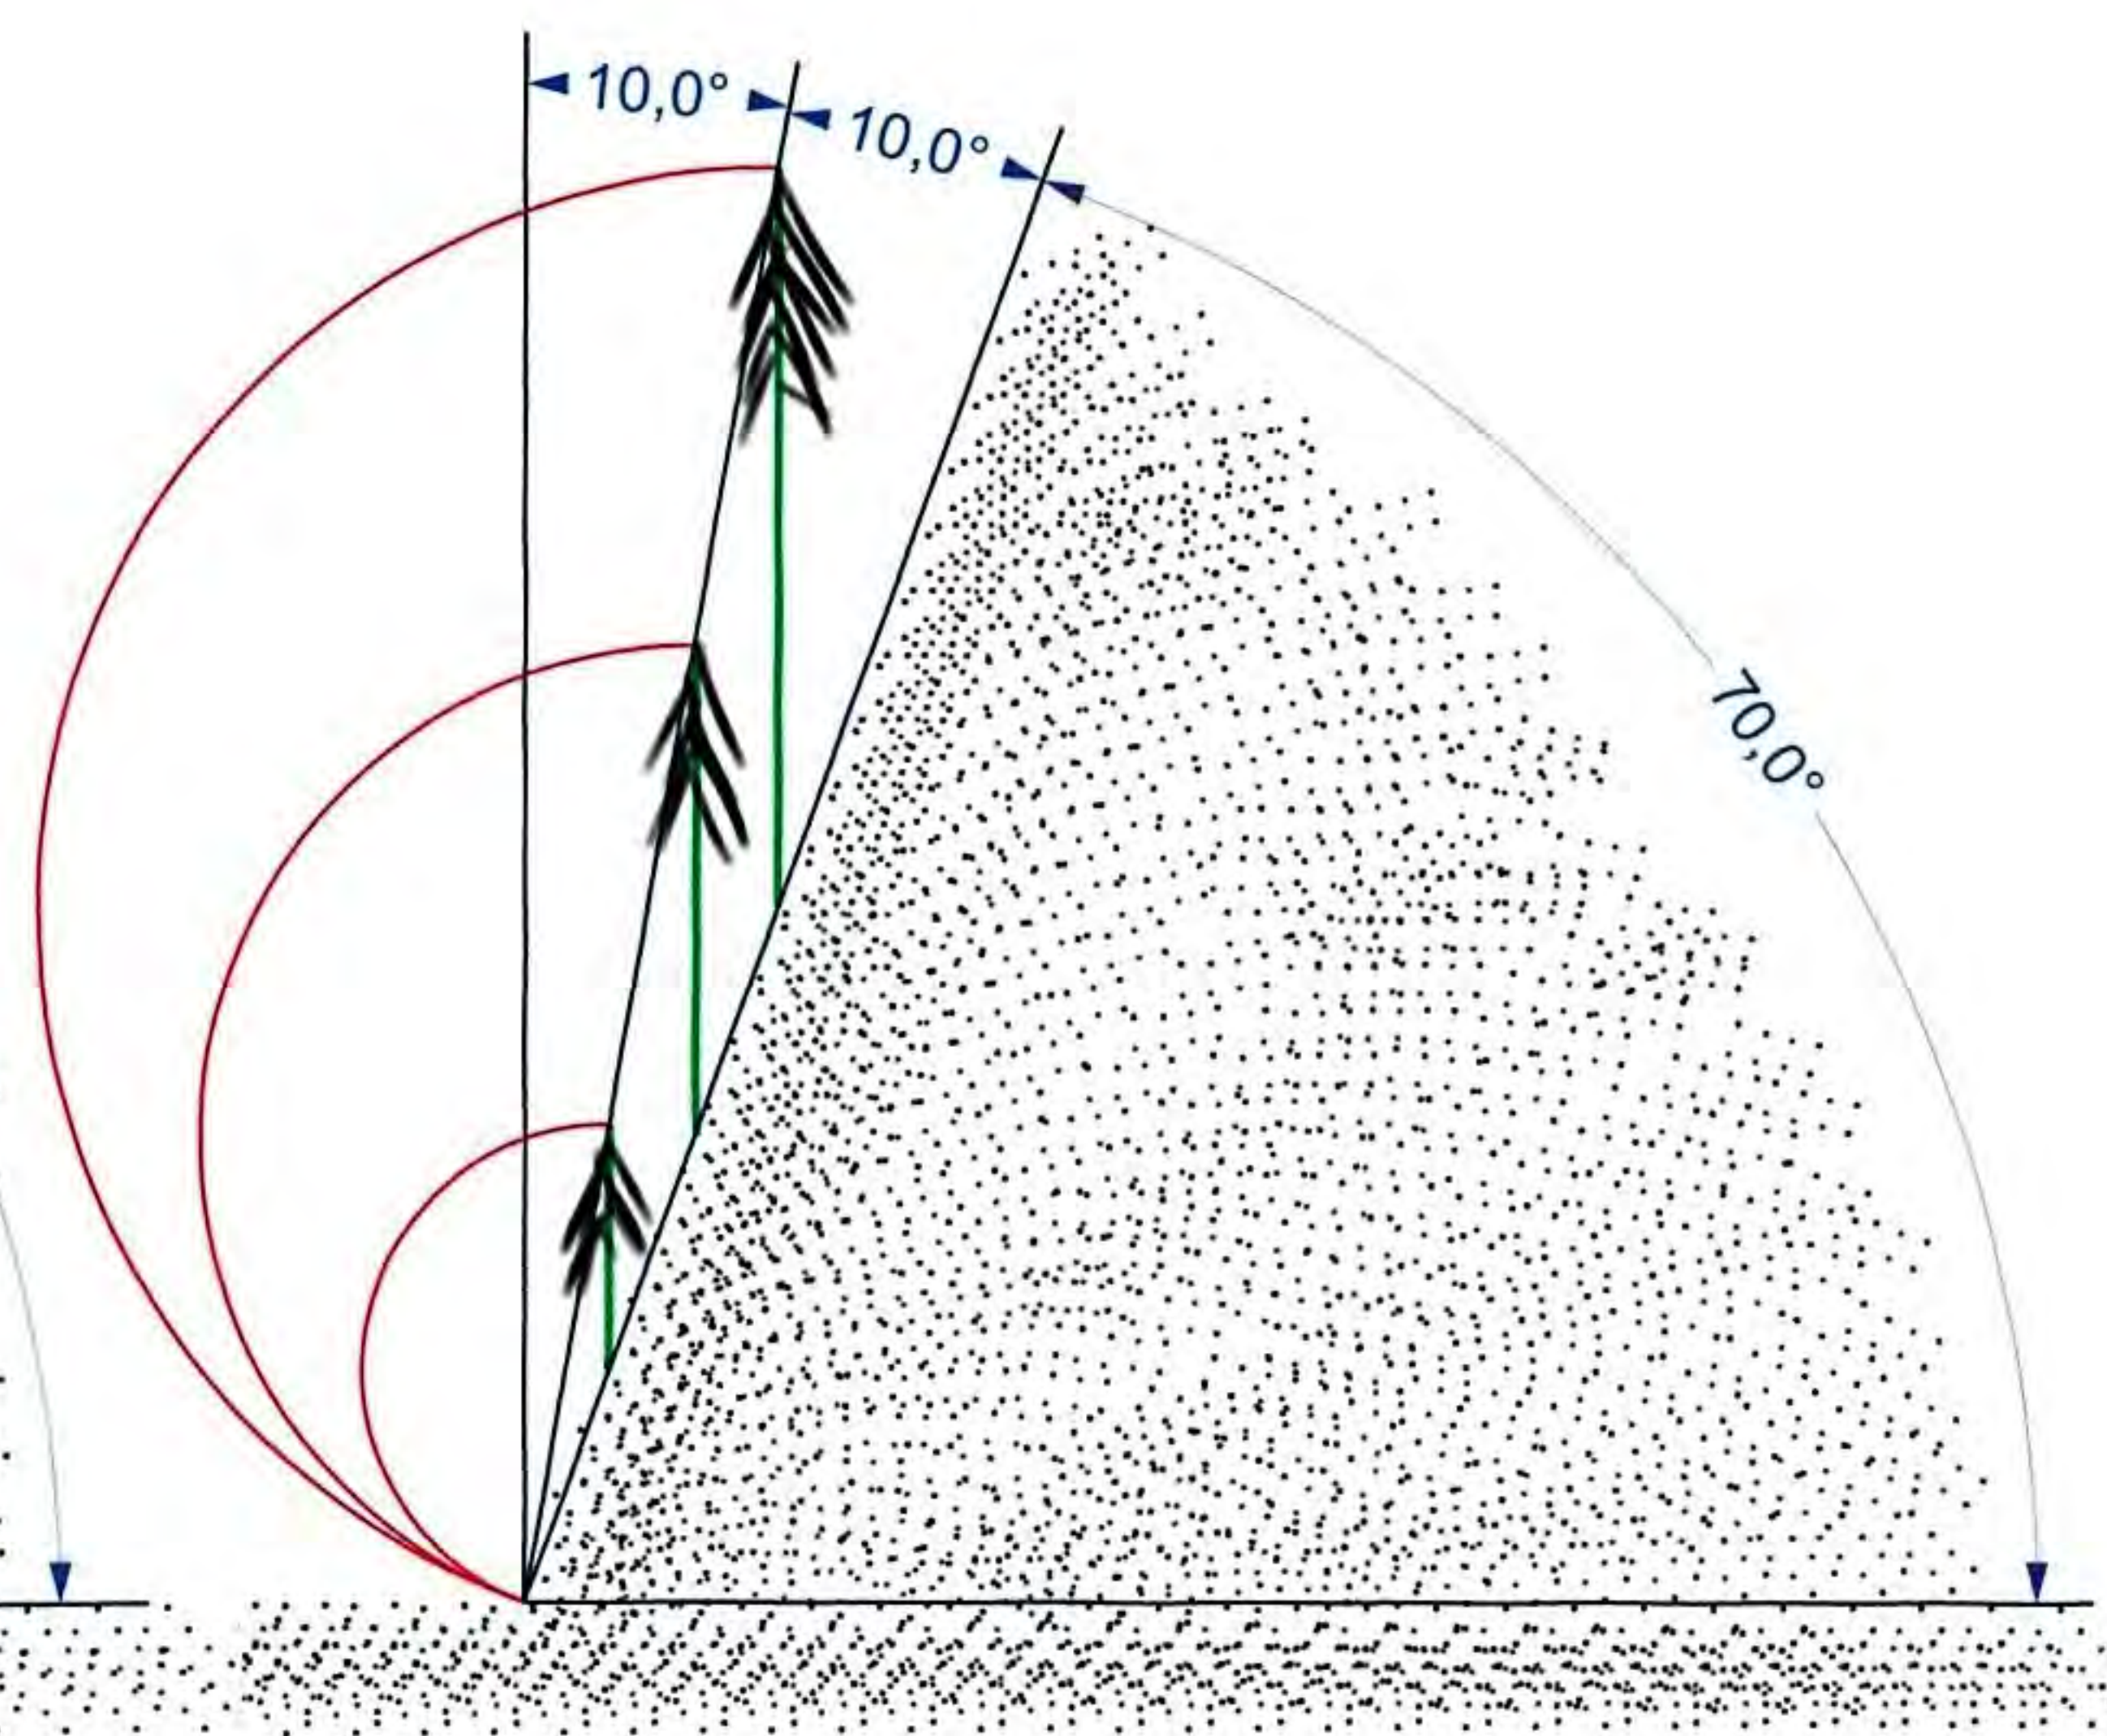

Slope angle: 30°

Slope angle: 45°

Slope angle: 70°

Summary: Even if the tree does not reach the trackbed or the road, it can put the airspace above traffic at risk, especially on steep slopes, when the tree is still slipping considerably.
