

# TUNGSTEN POWDER INJECTION MOLDING, TUNGSTEN ARMOR, MOCKUP FABRICATION

Karlsruhe Institute of Technology (KIT)  
Institute for Applied Materials  
Material Process Technology

Steffen Antusch, Volker Piotter

Challenges to Developing W-Based Materials for Fusion Applications  
University of California Santa Barbara  
February 13 – 15, 2012

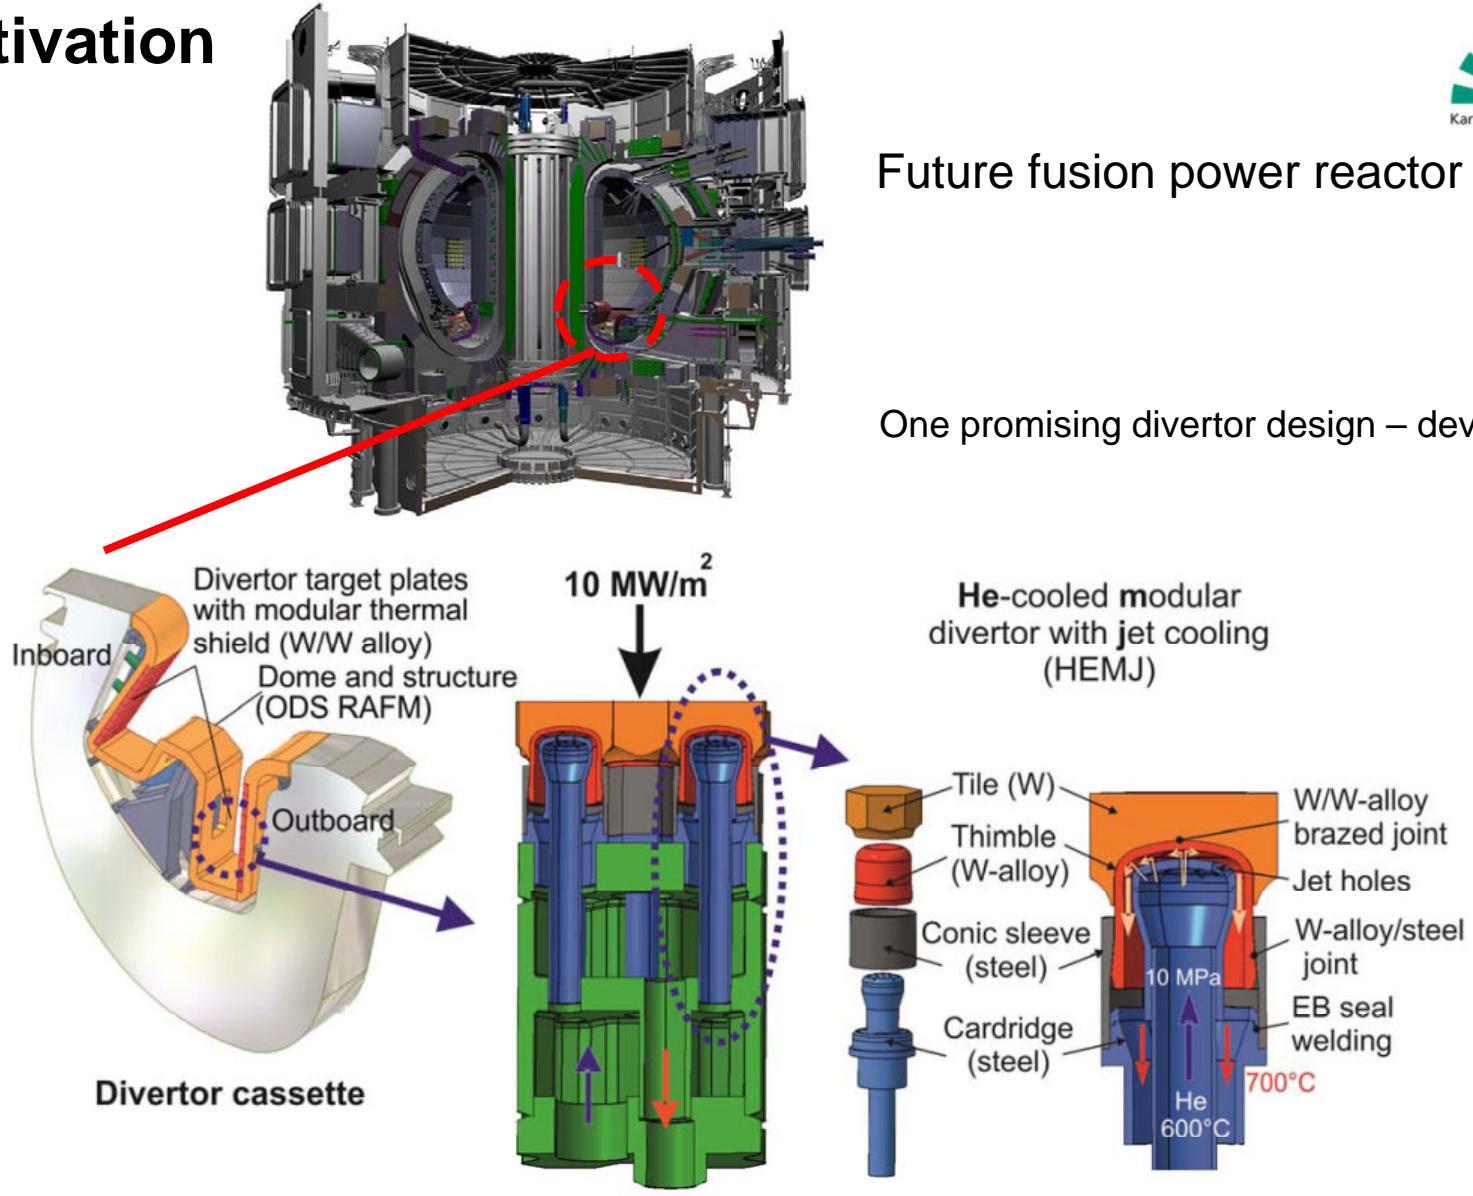

# Outline

- Motivation
- What is Powder Injection Molding (PIM)?
- The PIM process for tungsten developed at KIT
- Material development for PIM
- 2-Component tungsten PIM
- Summary & Outlook

# Motivation

Future fusion power reactor DEMO

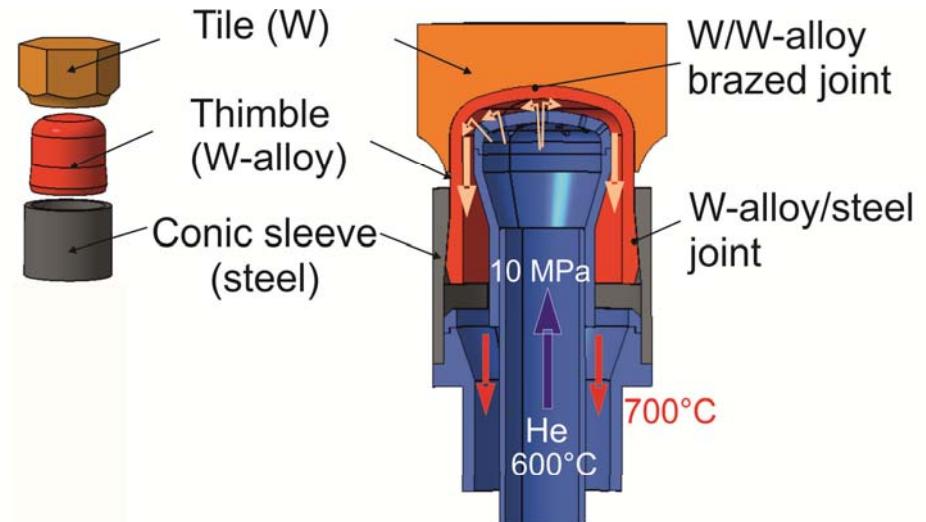

One promising divertor design – developed at KIT

P. Norajitra et al., KIT.

# Motivation

- ⇒ 1 Finger-module – 3 main parts
- ⇒ 2 – 3 several materials
- ⇒ 2 brazed joints
- ⇒ assembling, adjustment...

**1-Finger-Mockup**

- ⇒ DEMO: nearly 300.000 mockups
- ⇒ lifetime nearly 2 years

⇒ **Reasonable manufacturing method?**

# What is Powder Injection Molding (PIM)?

PIM – *Powder Injection Molding*: manufacturing technology

- MIM – *Metal Injection Molding*
- CIM – *Ceramic Injection Molding*

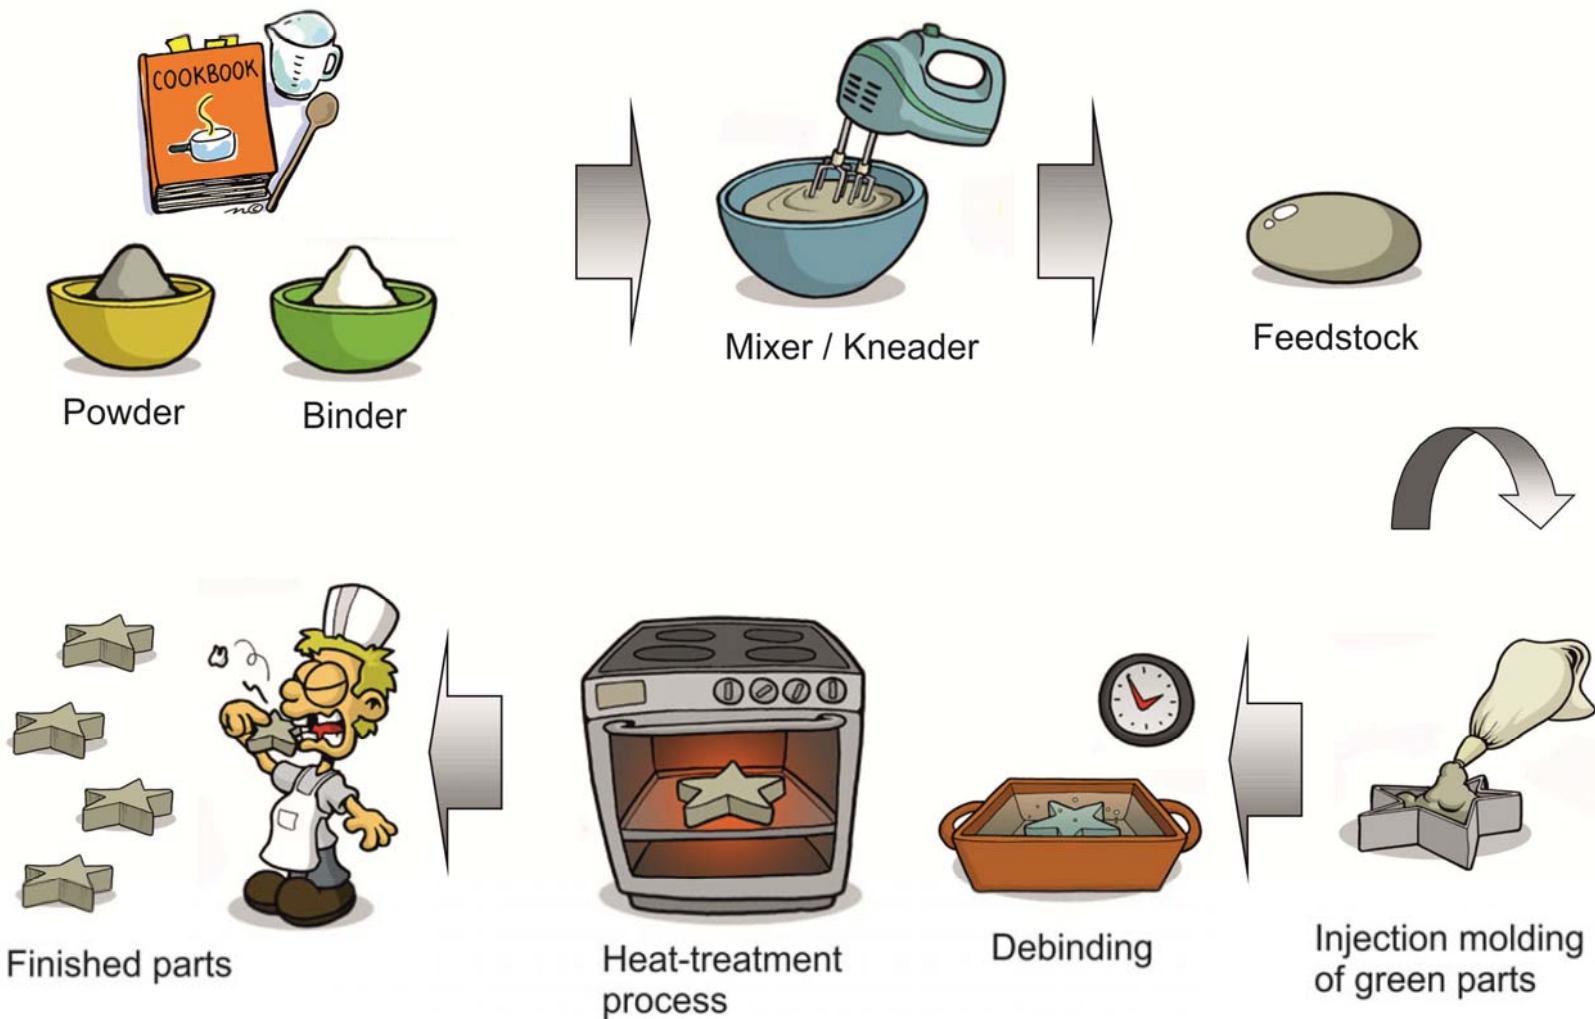

## Advantages

- ⇒ Cost-effective mass production
- ⇒ Producing of 3D-parts
- ⇒ Metal forming of tungsten based materials complicated

## Challenges

- ⇒ Adequate powders / powder mixtures
- ⇒ preparation / feedstock development
- ⇒ Heat-treatment process
  - ⇒ High density
  - ⇒ Low porosity

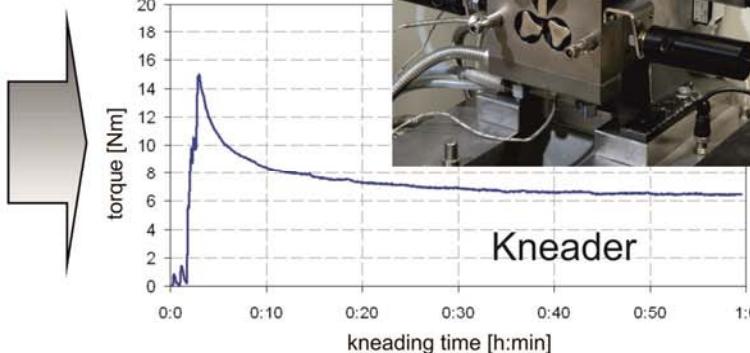

# What is Powder Injection Molding (PIM)?

## 5. Tungsten PIM samples

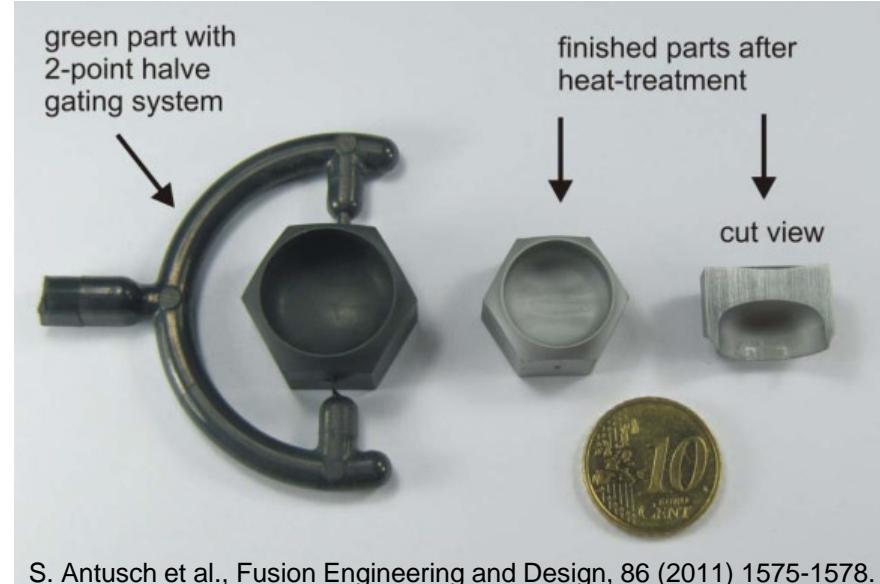

Green parts (dark) and finished parts (bright)

# The PIM process for tungsten developed at KIT

## 5. The divertor W PIM part „tile“

SEM image of the fracture surface:  
no porosity or cracks

### Heat-treatment process:

- pre-sintering (1800 °C, 2 h, H<sub>2</sub>) +
- HIP (2100 °C, 3 h, Ar, 250 MPa)

### Properties of the finished material:

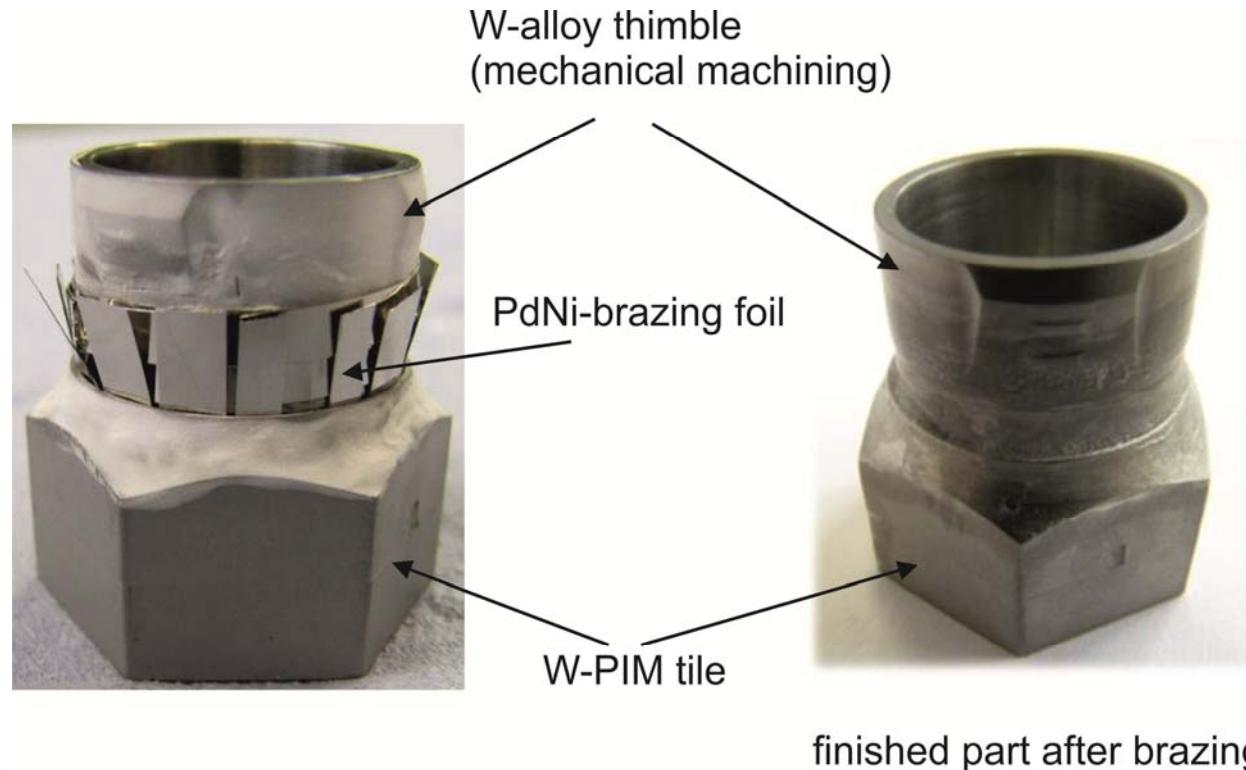

Vickers-hardness: 457 HV0.1

Density: 98.6 – 99 % TD

S. Antusch et al., Fusion Engineering and Design, 86 (2011) 1575-1578.

# The PIM process for tungsten developed at KIT ...joining...

- Fabrication of the W PIM tile successful
- Joining via brazing of W PIM tile and W-alloy thimble (produced by mechanical machining)

→ Mass production process?

Courtesy of L. Spatafora (Bachelor Thesis 2010)

# Material development for PIM

⇒ Material produced by mechanical alloying  
(2 h, n-Hexane, ZrO<sub>2</sub> balls + bowl)

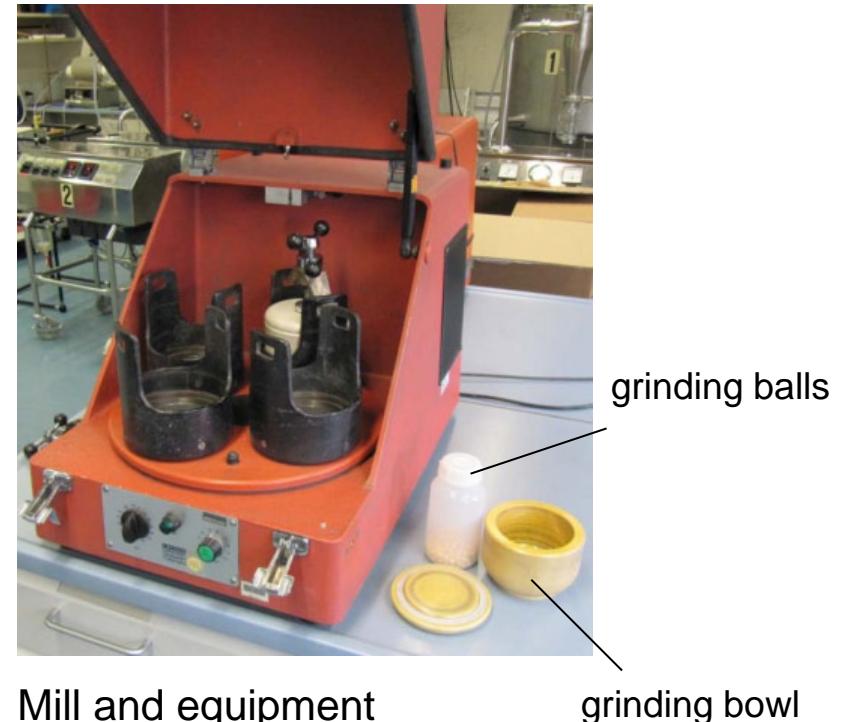

⇒ W-2La<sub>2</sub>O<sub>3</sub>

⇒ W-2Y<sub>2</sub>O<sub>3</sub>

PIM parts (small discs) produced

## Heat-treatment:

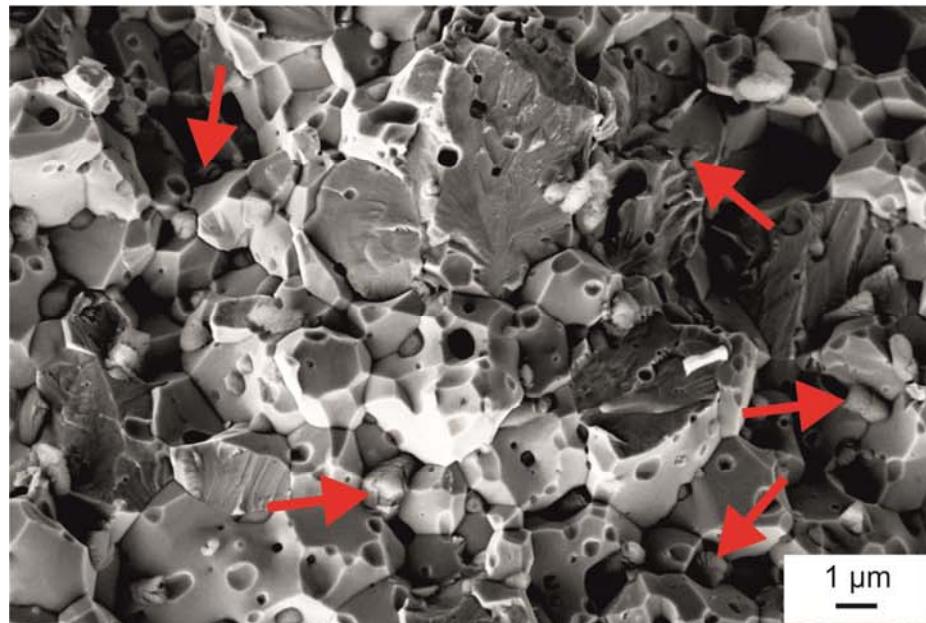

- pre-sintering (1800 °C, 2 h, H<sub>2</sub>) +
- HIP (2100 °C, 3 h, Ar, 250 MPa)

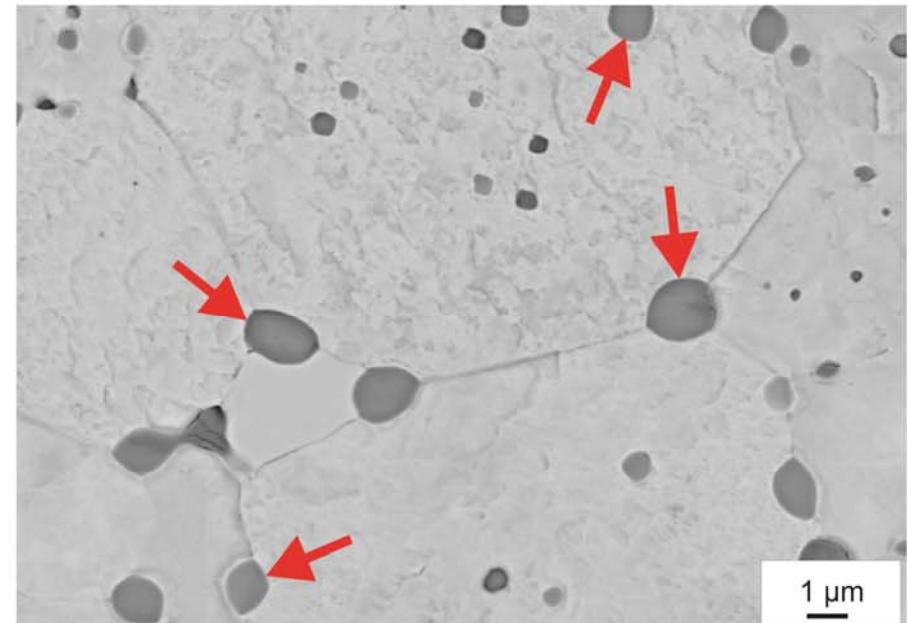

Material	Theoretical density (% TD)	Vickers-hardness (HV0.1)
W	98.6 – 99.0	457
W-2La <sub>2</sub> O <sub>3</sub>	96.5 – 97.2	586
W-2Y <sub>2</sub> O <sub>3</sub>	96.3 – 97.1	617

# Material development for PIM

⇒ W-2La<sub>2</sub>O<sub>3</sub>

SEM Microstructure (fracture surface)

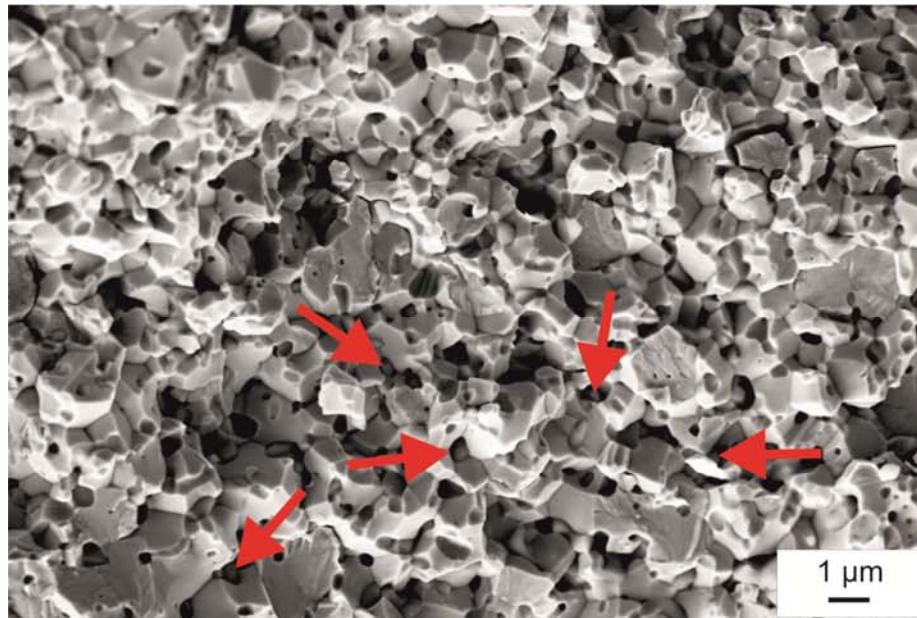

SEM Microstructure (metallographic section)

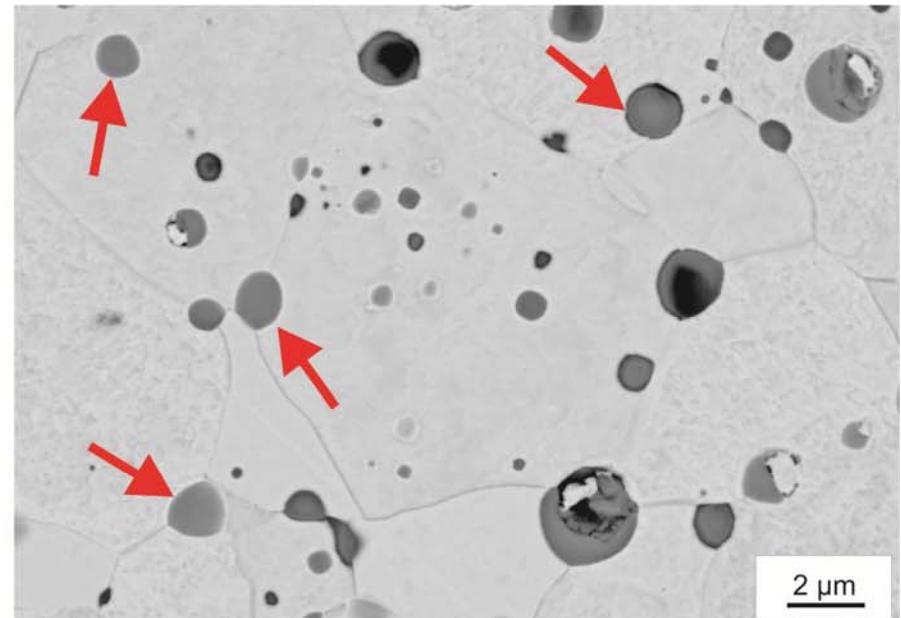

A selection of La<sub>2</sub>O<sub>3</sub>-particles is marked by arrows...

# Material development for PIM

⇒ W-2Y<sub>2</sub>O<sub>3</sub>

SEM Microstructure (fracture surface)

SEM Microstructure (metallographic section)

A selection of Y<sub>2</sub>O<sub>3</sub>-particles is marked by arrows...

# 2-Component tungsten PIM

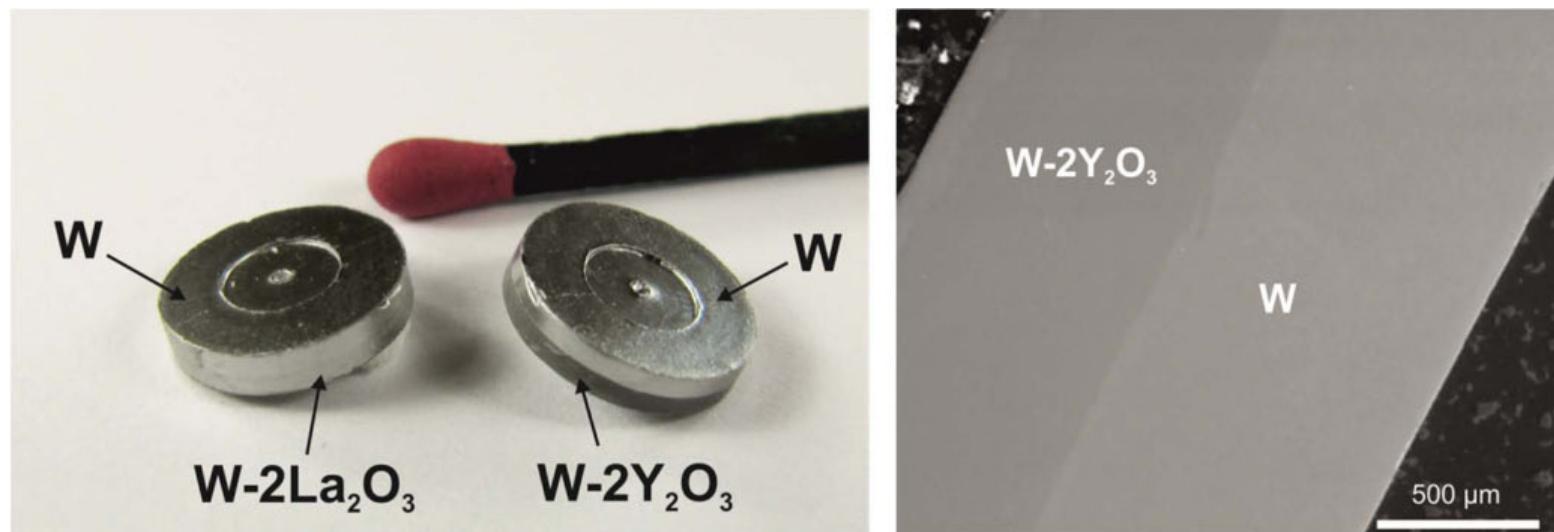

## Pretests via insert 2-Component PIM:

Material produced by mechanical alloying

### **Heat-treatment:**

- pre-sintering (1800 °C, 2 h, H<sub>2</sub>) +
- HIP (2100 °C, 3 h, Ar, 250 MPa)

⇒ W + W-2La<sub>2</sub>O<sub>3</sub> / W + W-2Y<sub>2</sub>O<sub>3</sub> PIM samples produced + characterized

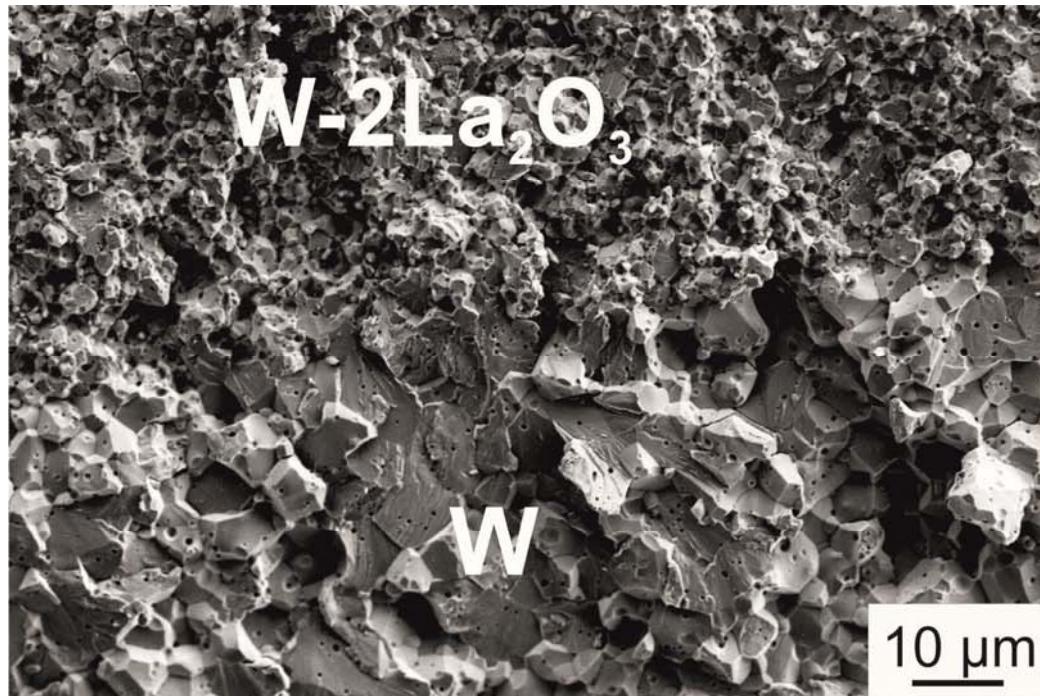

S. Antusch et al., Fusion Science and Technology (2012) submitted.

# 2-Component tungsten PIM

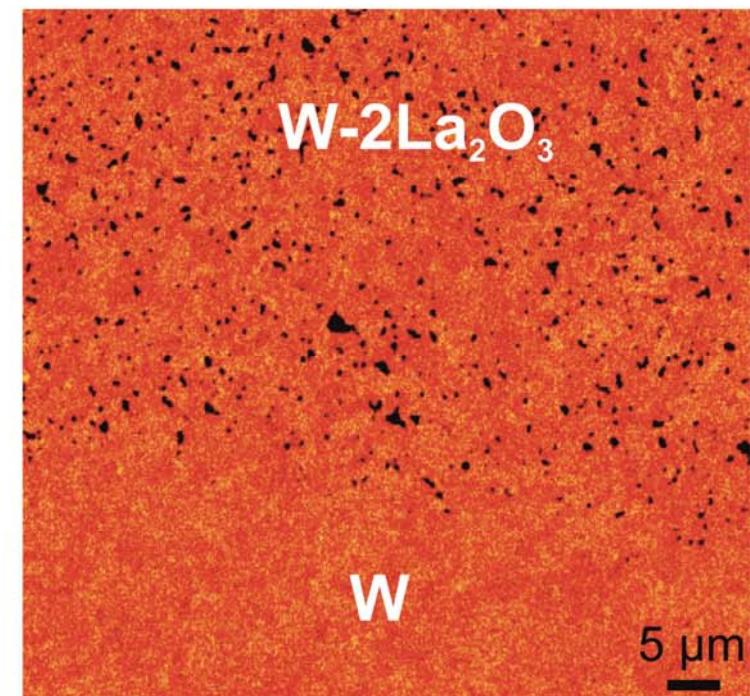

## Pretests via insert 2-Component PIM:

⇒  $\text{W} + \text{W}-2\text{La}_2\text{O}_3$

- ⇒ Joining seam: without cracks or gaps
- ⇒ Material connecting successful

SEM Microstructure (fracture surface)

AES Map (metallographic section)

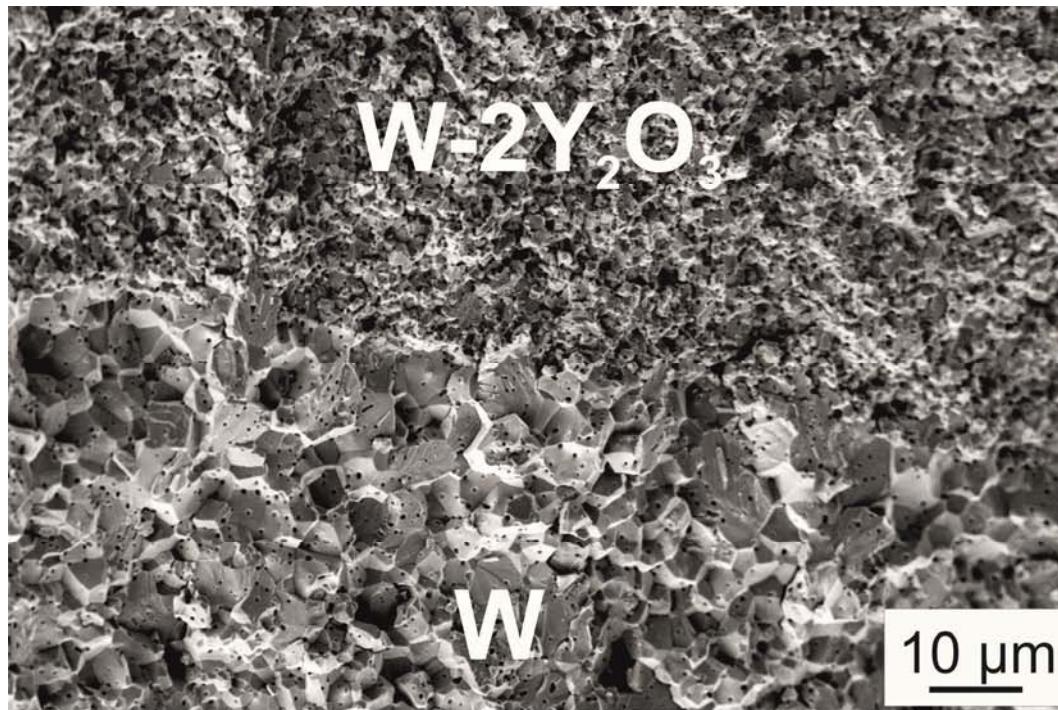

black:  $\text{La}_2\text{O}_3$   
red: W

# 2-Component tungsten PIM

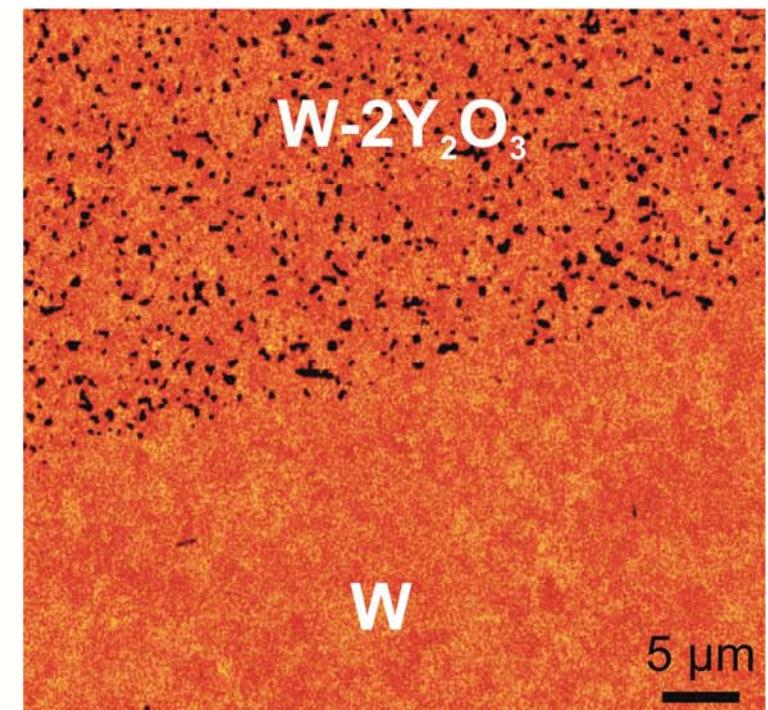

## Pretests via insert 2-Component PIM:

⇒  $\mathbf{W} + \mathbf{W-2Y_2O_3}$

⇒ Joining seam: without cracks or gaps  
⇒ Material connecting successful

SEM Microstructure (fracture surface)

AES Map (metallographic section)

black: Y<sub>2</sub>O<sub>3</sub>  
red: W

## 2-Component tungsten PIM

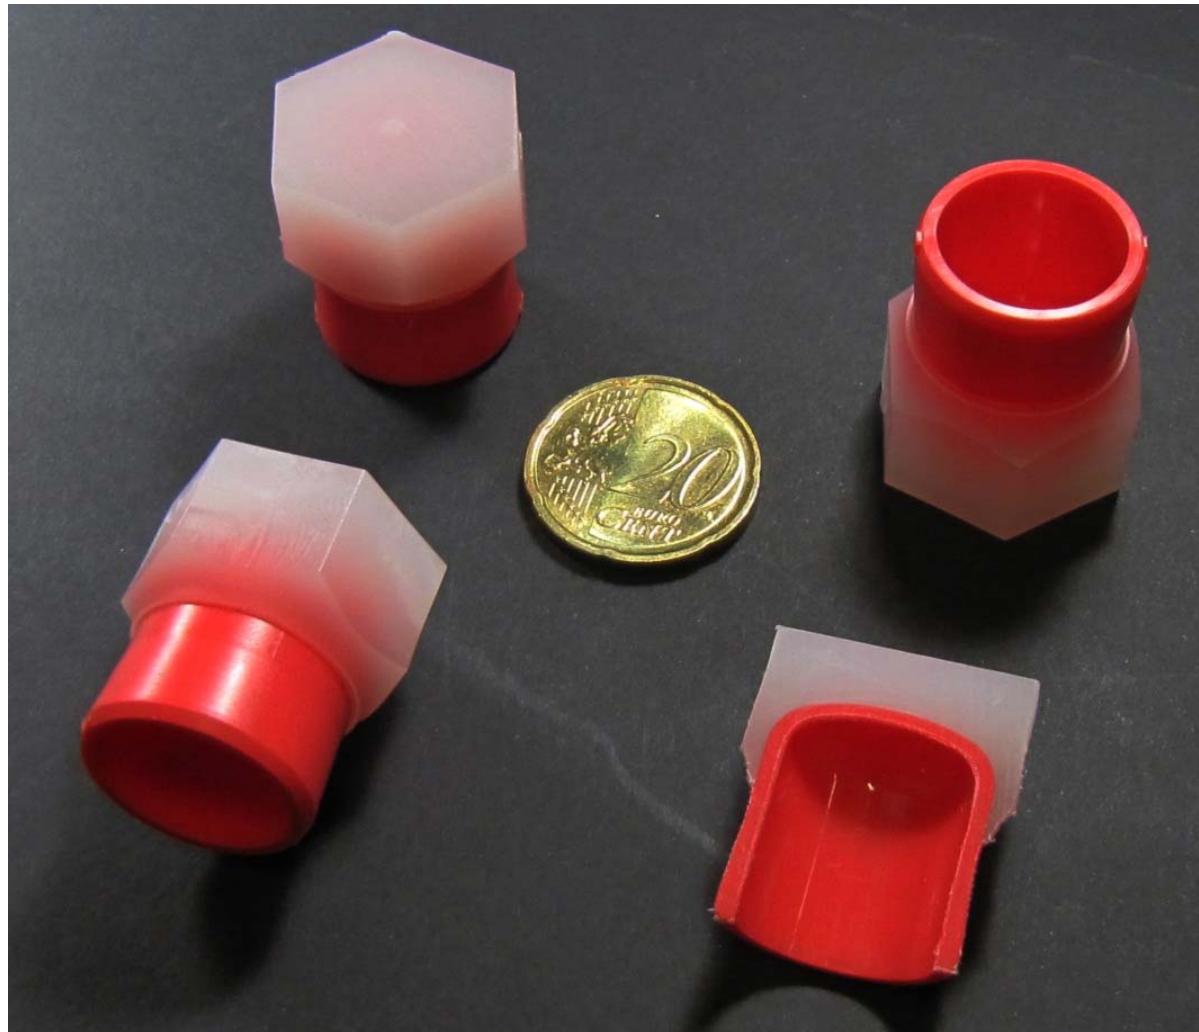

Knowledge transfer - from pretests to real 2-Component Powder Injection Molding process: material combination, heat-treatment process, shrinkage...

⇒ **Design and Engineering of a fully automatic  
2-Component PIM tool**

- ⇒ Tile and thimble in one unit with / without joining layer
- ⇒ Joining of 2 different materials without brazing in 1 process step

# 2-Component tungsten PIM ...first samples...

Bicolor plastic test samples to demonstrate the functionality of the new tool

# 2-Component tungsten PIM

## ...next steps....

- ⇒ Implementing of the new 2-Component PIM tool
- ⇒ Producing of 2-Component PIM parts:
  - ⇒ **W tile + W-2La<sub>2</sub>O<sub>3</sub> thimble**
  - ⇒ **W tile + W-2Y<sub>2</sub>O<sub>3</sub> thimble**
- ⇒ Adaption of the Heat-treatment process
- ⇒ Characterization (density, hardness, quality of the joining zone...)

## Goals for 2012

- ⇒ 1-finger mockup produced via 2-Component W PIM
- ⇒ feasibility study / demonstration of joining via 2-Component W PIM

# Summary

- **Material & process development for W PIM at KIT**

- Development of a suitable W feedstock: W1 + W2 (50:50) 50 vol.%
- Optimization of the heat-treatment process: pre-sintering + HIP
- Producing of W PIM parts
  - Properties of the finished divertor part W tile:
    - Density: 98.6 – 99 % T.D.
    - Vickers-hardness: 457 HV0.1
    - Microstructure without porosity or cracks
- Development of new W PIM materials:
  - W-2La<sub>2</sub>O<sub>3</sub>
  - W-2Y<sub>2</sub>O<sub>3</sub>
- Pretests via insert 2-Component W PIM
  - Investigation of the joining zone quality:
    - Joining seam: without cracks or gaps
    - Material connecting successful
- Design & Engineering of a new fully automatic 2-Component W PIM tool

# Outlook

- Establish 2-Component tungsten Powder Injection Molding at KIT
- Development of new materials for multicomponent W PIM
- Material characterization:
  - Charpy and tensile tests
  - High Heat Flux Tests (IPP Garching / FZ Jülich)

## Powder Injection Molding:

- Mass production & joining process
- Time & cost effective near-net-shape forming process
- Shape complexity and high final density

# Thank you very much!
