**August 15, 2007**

- **Problem Statement**
- **Approach**
- **Boundary Object Example**
- **Previous Research Applications**
- **FCS Case Study**
- **Development of Boundary Object Framework**
- **TMOS Case Study**
- **Results**
- **Implications**
- **Recommendations**
- **Conclusions**

# Introduction

## Case 1: Ineffective boundary object

## Case 2: Effective boundary object

# Problem Statement

- **Interdependencies of technical and organizational interfaces (Sosa, et al 2003; Gultati and Eppinger 1996)**
- **Programs and projects suffer from “organizational” disconnects**
  - **Disconnect: Latent differences in understanding among groups that can negatively affect the program should they remain undetected or unresolved (Greer, Black and Adams, 2006)**
- **Cost of unclear documentations and rework**

# Organizational Disconnects

**Disconnects are costly problems that are difficult to detect**

**Disconnects originate at interfaces**

**Understand disconnects**

**Understand interfaces by looking at boundary objects**

**Boundary Objects: Bridge gaps and enables communication, coordination, and collaboration across boundaries**

# Research Approach

# Boundary Object Example

# Previous Research Applications

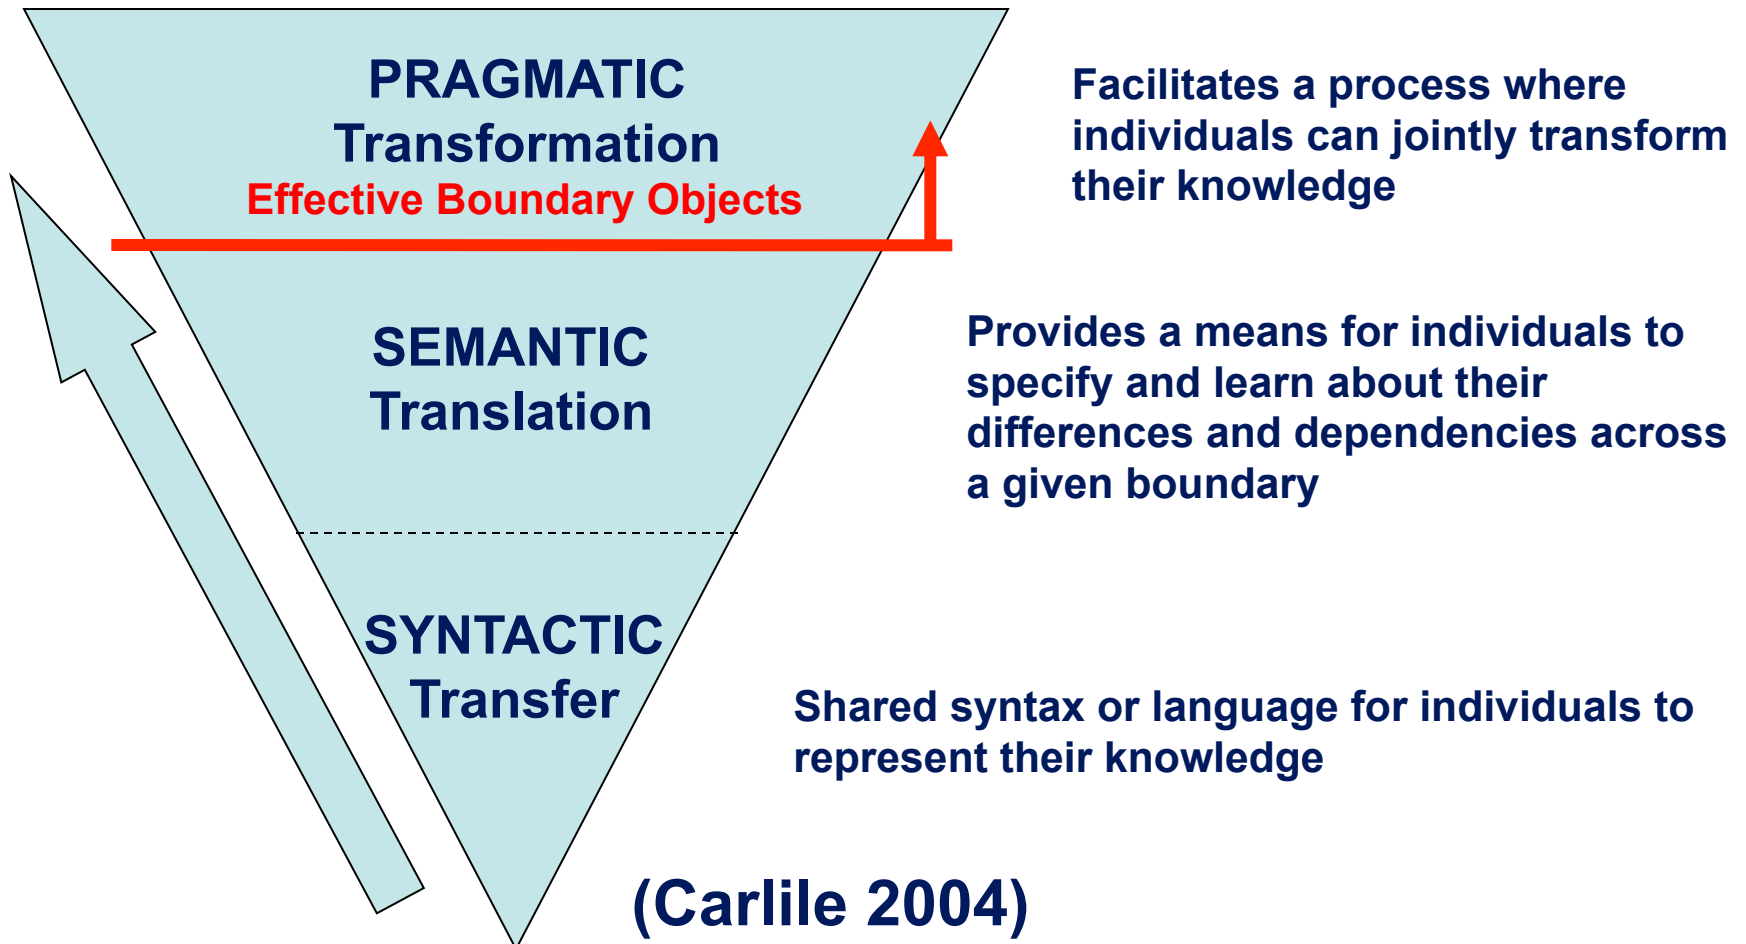

<b>Field</b>	<b>Organization</b>	<b>Boundary object</b>
<b>Social science (Star and Griesemer 1989)</b>	<b>Museum of zoology</b>	<b>Diagrams California map Collecting forms</b>
<b>Design engineering (Henderson 1991)</b>	<b>Engineering firm</b>	<b>Sketches Drawings CAD</b>
<b>Service (Ackerman and Halverson 1999)</b>	<b>Telephone hotline group</b>	<b>Written notes</b>
<b>Product development (Carlile 2002)</b>	<b>Automobile design and manufacturing firm</b>	<b>Drawings Automobile parts Schedule</b>
<b>Software development (Gunaratne et al. 2004)</b>	<b>R&amp;D facility</b>	<b>Storyboard Prototype</b>

# FCS Case Study - Results

- **Future Combat System**
- **Organization representatives interviewed**
  - Boeing, BAE, Lockheed Martin, CSC, LNXW, IBM, COLSA
- **Communication mechanism were primarily Word documents, PPT slides, and Excel graphs**
- **Local vs global communication objects**
- **Interorganizational trust is necessary for people to use boundary objects**

# Criteria for Effective Boundary Objects

- **TSAT Mission Operations System, LA**
- **Interested in complex system and organizational interactions**
- **Method**
  - **Survey 1: Social interaction survey**
  - **Survey 2**
    - **Organizational interfaces**
    - **Understanding information**
    - **Boundary object attributes**
- **Data collected**
  - **Interviews**
  - **13 survey responses**

# Understanding Information in TMOS

**Where do people go for information regarding documents?**

All p-values < 0.018

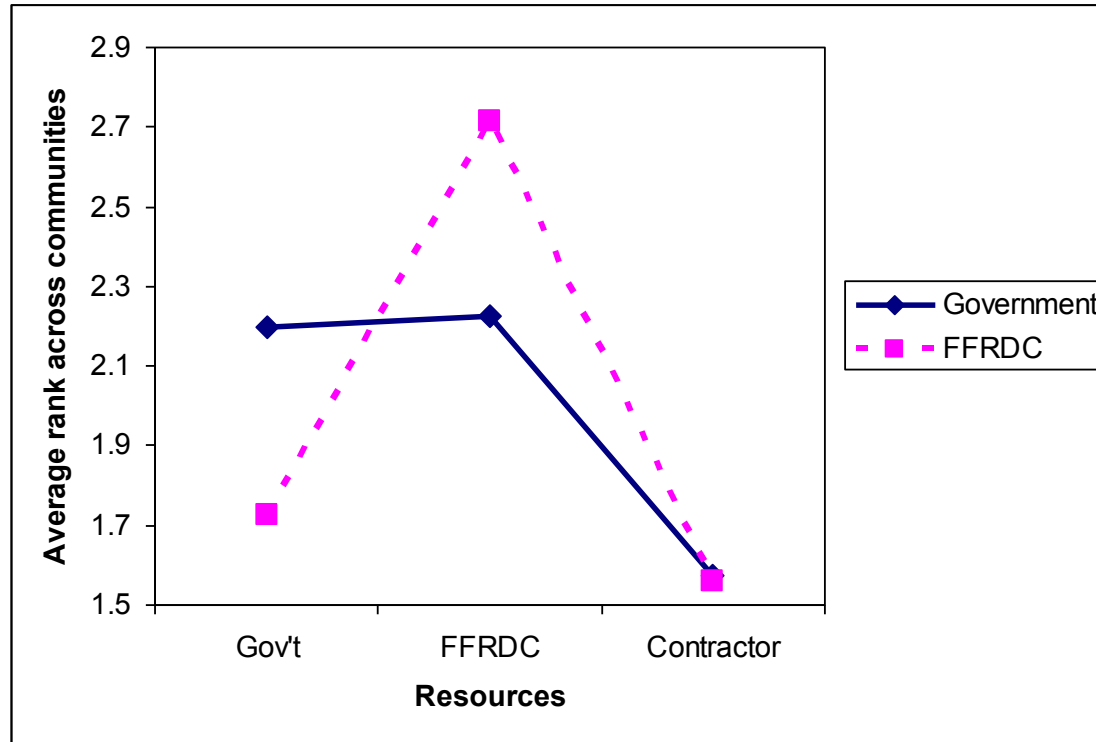

**Who do people go to first?**

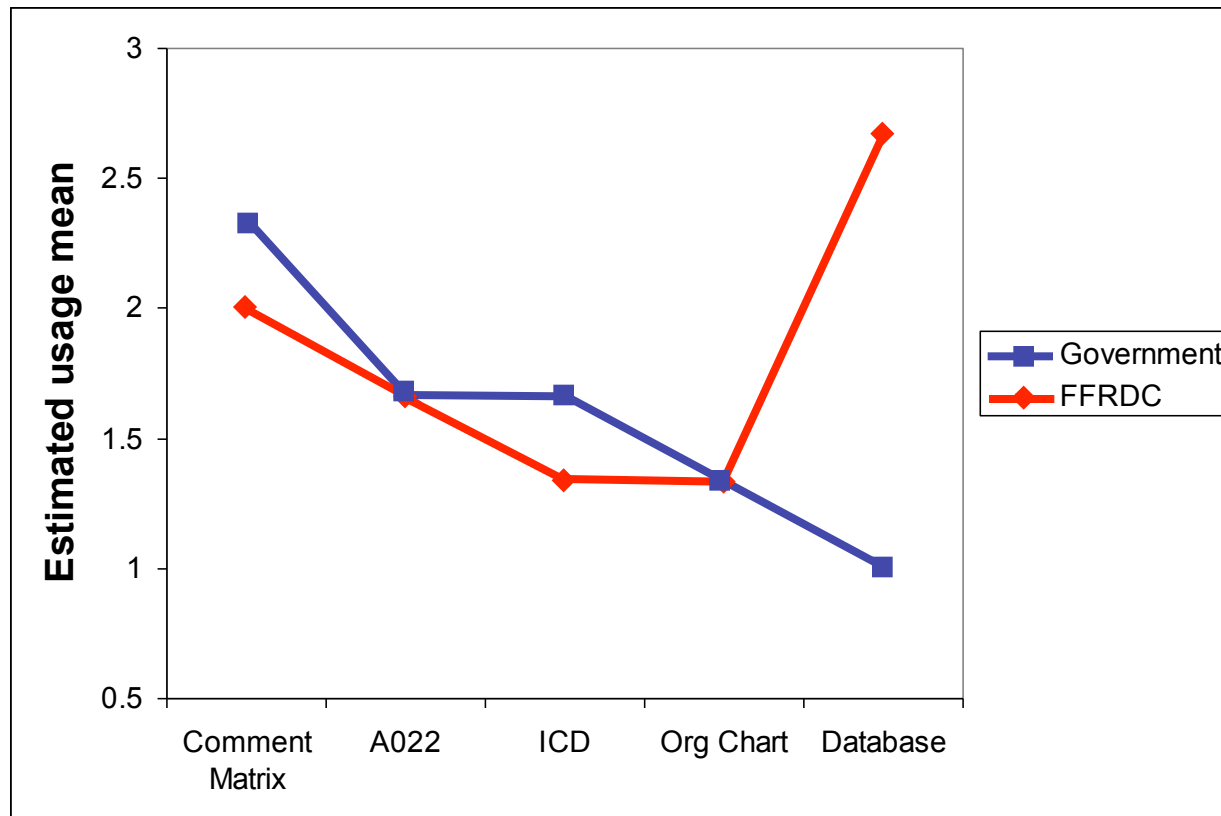

**People rely on other people significantly more than artifacts**

## Who turns to whom?

**Gov' t employees are equally likely to turn to Gov' t and FFRDC people while FFRDC employees turn to other FFRDC people first**

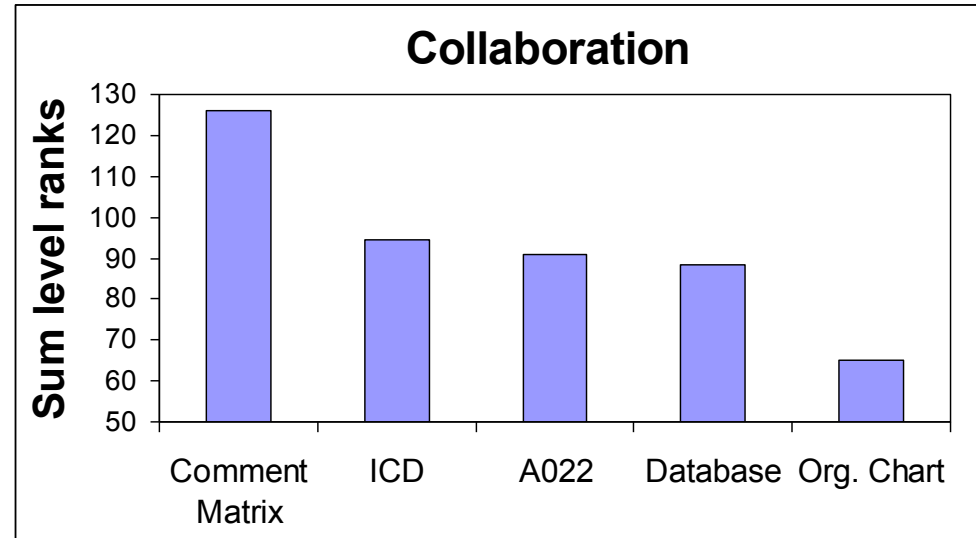

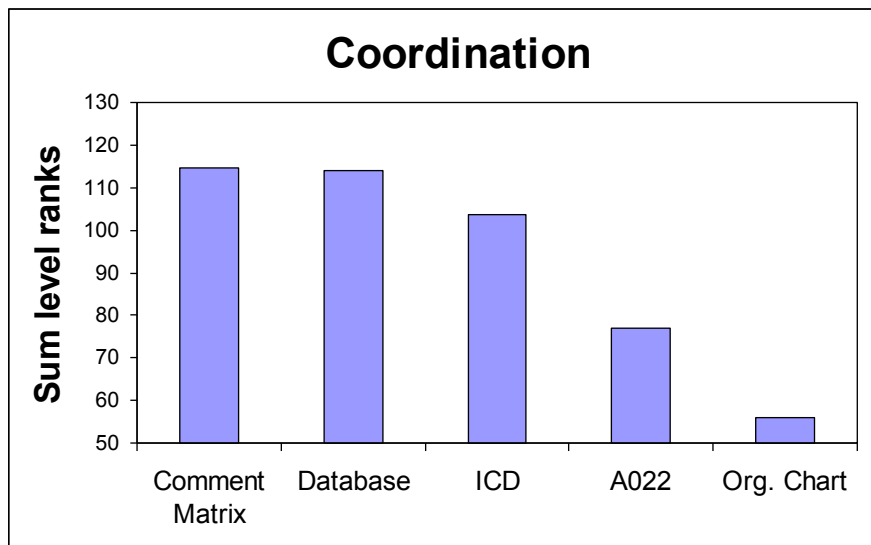

## Are there differences in artifact usages?

**Usage is similar except for Database usage**

# Organizational Interfaces

**Which artifacts are helpful for coordination and collaboration?**

**Comment Matrix tends to be more effective as a boundary object**

# Attributes Results

**Traceability and inclusivity are critical attributes**

# Boundary Object Attributes

- **Traceability:** level at which users can document and track alterations to the object
- **Inclusivity:** level of involvement of different stakeholders during the creation and use of the object
- **Synchronization:** the extent to which duplicates of the same object are linked

<b>Traceability</b>	<b>Inclusivity</b>
<b>Synchronization</b>	<b>Layers</b>
<b>Freshness</b>	<b>Medium</b>
<b>Granularity</b>	<b>Importance</b>
<b>Malleability</b>	

## Recap of Result

- **People rely on other people significantly more than artifacts**
- **Gov't employees are equally likely to turn to Gov't and FFRDC people while FFRDC employees turn to other FFRDC people first**
- **Usage of artifacts amongst communities are similar except for Database usage**
- **Comment Matrix tends to be more effective as a boundary object**
- **Traceability and inclusivity are critical attributes**

# Implication: Usage of Boundary Objects

## Case 1: Ineffective boundary object

## Case 2: Effective boundary object

**Over reliance on other people for understanding and clarity of information**

# Implications

- **Having the right boundary objects with the right attributes are important**
- **Prioritizing specific attributes and boundary objects can foster more collaboration**
- **Other organizational mechanisms are needed to maintain collaborative interfaces**

# Recommendations

- **Do:** Increase understandability by providing different levels of granularity in the artifacts (understandability)
- **Do:** Determine the frequency of freshness for boundary objects and prioritize resources accordingly (freshness)
- **Do:** Generate a sense of ownership amongst the users on the creation of critical boundary objects (inclusivity)
- **Don't:** Separate form from function (granularity and layers)
  - Concept maps as roadmaps for long documents

# Conclusion

- Interdependencies of organizational structure and technical structure
- Relying on people rather than artifacts for information can increase the overall cost of the program
- Not all communication mechanism, or artifacts, are used the same way and have the same effectiveness
- Boundary objects are effective mechanisms that assist in knowledge and value creation through collaborative process
- High traceability and inclusivity are two factors common in effective boundary objects
- If used correctly these boundary objects can serve, with other organizational mechanisms, as the glue that binds and connects different communities together

  - Dr. Ricardo Valerdi
  - Professor Nightingale
  - JK Srinivasan

**Thank you**

**Questions?**

**Contact: Allan Fong  
afong05@mit.edu**

# Backup Slides

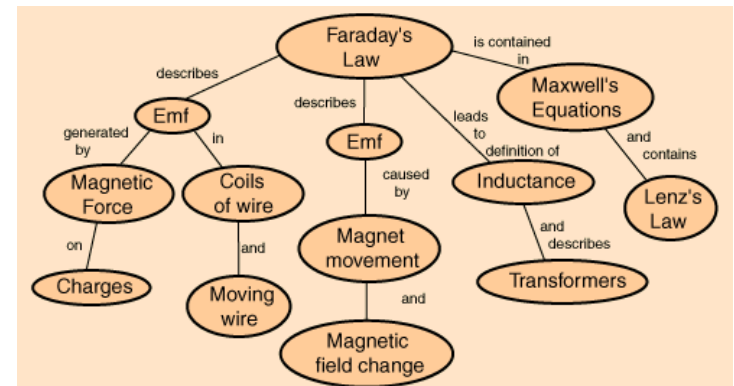

## E-mail example

- **Difficult to trace e-mails**
- **Lose of freshness**
- **Large volume of e-mails**
  - Readers are forced to become information filters
- **Standardized forms and methods boundary objects have been seen to be more effective in the case study than ideal type boundary objects**
- **Suggestion of standardized subject line could help users be better filters of information**
  - **Subject: |LvL 6|Detail 2|Time 2|April 20|**

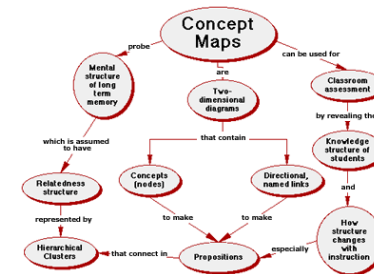

# Concept Maps

- **Display information in concept maps**
  - Useful for brainstorming, ontology, collaboration
  - Many different types of concept maps
    - Milton Pyramid
  - Various software programs to build concept maps
    - Viso
    - [www.smartdraw.com](http://www.smartdraw.com)
- **Incorporate concept maps to documents**
  - Helps writers and readers understand information better

Any change in the magnetic environment of a coil of wire will cause a voltage (emf) to be "induced" in the coil. No matter how the change is produced, the voltage will be generated. The change could be produced by changing the magnetic field strength, moving a magnet toward or away from the coil, moving the coil into or out of the magnetic field, rotating the coil relative to the magnet, etc. Faraday's law is a fundamental relationship which comes from [Maxwell's equations](#). It serves as a succinct summary of the ways a [voltage](#) (or emf) may be generated by a changing magnetic environment. The induced emf in a coil is equal to the negative of the rate of change of [magnetic flux](#) times the number of turns in the coil. It involves the interaction of charge with magnetic field.

# Recommendations for modifying artifacts

- Database synchronization
- Organization chart for expertise
- Addition of useful layers to documents and other objects
- Form of the object following its function
  - Information is rarely related linearly
  - Concept map

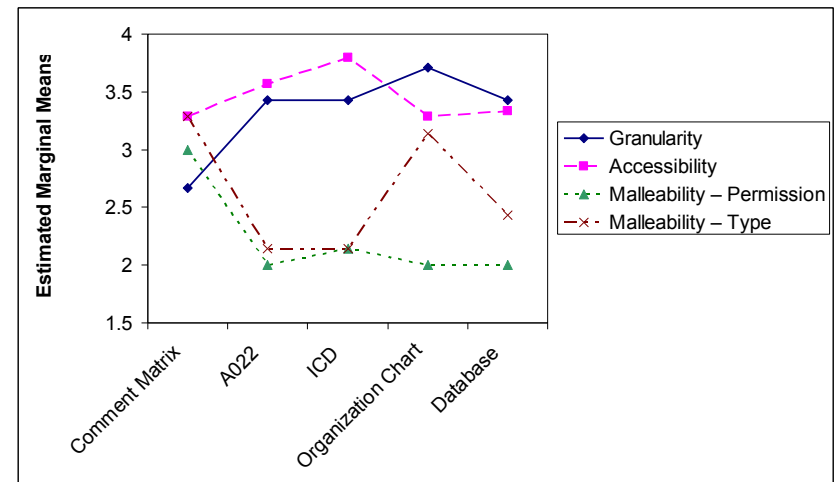

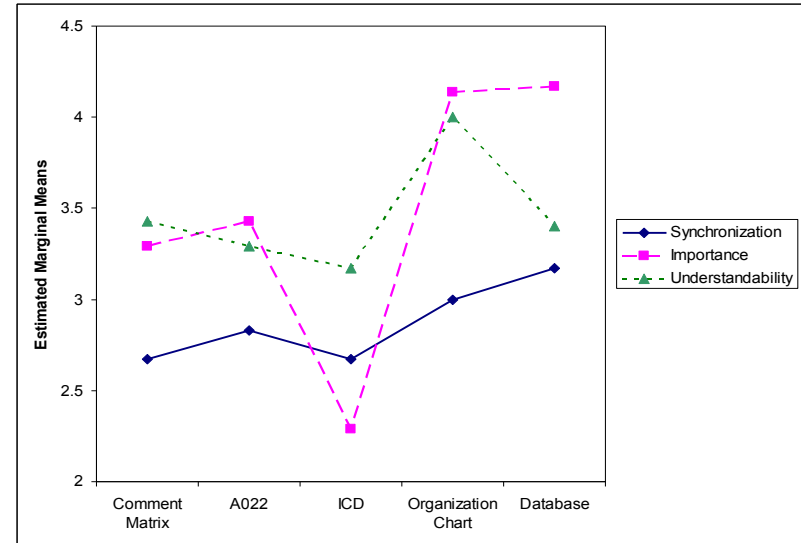

# Implication for Systems Integrators

**Boundary Objects**  
are a useful construct  
to understand the role and  
value of System Integrators

# Attributes Results

# Boundary Object Attributes

- **Medium: virtual vs physical**
- **Granularity: level of information detail and context**
- **Staleness Factor: how stale the information tends to be**

$$\frac{\text{Average time to update a boundary object}}{\text{Average time between changes in the information}}$$

- **Malleability: how easy is it for someone to change, add information, mark up**
  - **Control vs Type malleability**

- **Community of Practice**: Shared understanding of what the community does, of how to do it, and of how it relates to other communities (Brown and Duguid, 1998)
- **Boundary Objects**: Artifacts that are flexible enough to adapt to local needs yet specific enough to maintain a common identity across different interpretations (Star and Griesemer, 1989)
  - Bridge gaps and enables communication, coordination, and collaboration across boundaries
- **Boundaries**: gaps or differences in organization structures or entities, political power, relative expertise, knowledge domains, etc. (Greer, Black and Adams, 2006)
- **Disconnect**: Latent differences in understanding among groups that can negatively affect the program should they remain undetected or unresolved (Greer, Black and Adams, 2006)

# Medium, Granularity, Malleability, Inclusivity

- **Medium: virtual vs physical**
- **Granularity: level of information detail and context**
- **Malleability: how easy is it for someone to change, add information, mark up**
  - Control vs Type malleability
- **Inclusivity: level of participation**

# Layers, Traceability, Importance

- **Layers:** What additional resources you need to understand the information (Swarts, 2004)
- **Traceability:** ability to track usage and changes, process transparency
- **Importance:** Criticality, how would you use the information
