

POSTER DESCRIPTION SHEET

Title: *Enterprise Integration Strategies Across Complex Enterprise Networks*

Author(s): Christopher G. Glazner

Summary

Description: This research examines strategies for architecting integrated project-based enterprise networks of companies, balancing the desire to share information with retaining core competencies.

Key Points:

- 1) There must be room in the initial architecture for its inevitable (and, to some extent, planned or directed) evolution
- 2) Create mechanisms within the architecture to transparently capture and integrate knowledge
- 3) Proper planning can go far in overcoming the “teaming penalty”

Linkage with

Research: This poster reflects the current state of the research I am conducting on integration in enterprise networks. I am completing a case study examining these issues in the Joint Strike Fighter program, working with several of the companies involved in this endeavour. This case study is part of a master's thesis, to be followed by doctoral work that will examine these issues more closely.
