

DEVELOPMENT OF DROUGHT RISK MAP OF ZAYANDEHRUD DAM CATCHMENT USING WATER RESOURCE APPROACH PROCESS

YOUSEF MORADI SHAHGHARYEH

UNIVERSITI SAINS MALAYSIA

2016

**DEVELOPMENT OF DROUGHT RISK MAP OF ZAYANDEHRUD DAM
CATCHMENT USING WATER RESOURCE APPROACH PROCESS**

by

YOUSSEF MORADI SHAHGHARYEH

**Thesis submitted in fulfilment of the requirements for the
degree of Doctor of Philosophy**

April 2016

STATEMENT

This thesis is submitted for the degree of Doctor of Philosophy at the Universiti Sains Malaysia. It is the result of my own work and contains not anything which is the outcome of work done in association except where precisely specified in the text.

Yousef Moradi Shahgharyeh

DEDICATION

This thesis is dedicated to the soul of my late Mother and my Father for their endless inspiration and moral support during all my life, to my wife for patience and stands with the long my absence, to our children in who's their innocent look.

ACKNOWLEDGEMENTS

It is a preference to thank those people who assisted me to fulfil this thesis.

Firstly, I am very appreciative to my supervisor; Professor Ir. Dr Md Azlin Bin Md. Said and CO-Supervisor Professor Dr Ismail Bin Abustan, for their guidance in direction and technique throughout my PhD and also particular thanks are due for their valuable comments on the first draft of the dissertation.

Especial thanks to Professor Dr S. Eslamian field supervisor and Associated Professor M. Nasri for their endless energy during site and field investigation and also their excellence and immense discussion.

Thank you to my colleagues in the department of disaster management governor office of Esfahan province, with whom I was able to discuss and share ideas. I am also indebted to many others in the Esfahan Regional Water Company (ERWC), particularly to Mr Asadi, Department water resource investigation for their support in building and installation of field equipment.

Finally, I would like to thank H. Nakhkob, for his support, his essential work in collection of survey and control field data.

CHAPTER 1 -INTRODUCTION

1.1 Background.....	1
1.2 Water problems as a major challenge.....	2
1.3 Hazard, vulnerability and risk analysis.....	7
1.4 The Objectives.....	7
1.5 Thesis structure.....	8

CHAPTER 2 - LITERATURE REVIEW

2.1 Drought.....	10
2.2 Drought Classification concepts.....	11
2.2.1 Drought descriptions	11
2.2.2 Drought types classification	11
2.2.3 Indicators in Drought.....	15
2.2.4 Drought indices	16

2.3	Rainfall Variability Index (RVI)	21
2.4	Drought management and risk assessment.....	22
2.4.1	Drought hazard	25
2.4.1.1	Severity and frequency	25
2.4.1.2	Climate change and droughts	25
2.4.1.3	Drought and ENSO	27
2.4.2	Drought vulnerability	30
2.4.2.1	Causal and impact assessment.....	30
2.4.2.2	Impact assessment	30
2.4.2.3	Temporal Trends	31
2.5	Effect of Geology and Geomorphology on balance of water resources ...	31
2.6	Mutual impact of drought and land degradation	33
2.6.1	Land Degradation.....	35
2.6.2	Drought and Groundwater - The vulnerability of aquifers.....	42
2.6.3	Land Use and Land Cover (LU/LC) Accelerate Drought	45
2.7	Impact of Drought on the Streamflows, Wetlands, and Reservoirs	47
2.7.1	Drought influence the Streamflows and Aquatic Systems	48
2.8	Causal Relationships	54
2.9	Hierarchical approach in water Allocation.....	56
2.10	Water Resources Approach Process model (WRAP model).....	62

CHAPTER 3 - METHODOLOGY OF THE STUDY

3.1	Introduction	64
3.2	Methodology.....	64
3.3	Materials and Data Collection	67

3.3.1	Collection and Compilation of Data.....	68
3.3.2	Sufficiency of Data.....	69
3.3.3	Study Area and data base	71
3.3.4	Parameters determined using GIS	73
3.3.4.1	Remote Sensing	73
3.3.4.2	Data pre-processing	74
3.4	Description of the Zayandehrud Dam Catchment (ZDC)	83
3.5	Landform as basic data	85
3.5.1	Topography	85
3.5.2	Morphometric Parameters	87
3.5.3	Slope	92
3.6	Geological information of ZDC	96
3.6.1	Seismotectonic and water resources.....	102
3.7	Landform of ZDC	104
3.8	Climatology	108
3.8.1	Precipitation.....	108
3.8.2	Evapotranspiration.....	118
3.9	Aridity Index (AI).....	121
3.10	Hydrology system of ZDC	125
3.10.1	Runoff data in ZDC	125
3.10.2	Regional distribution of snowmelt-dominated runoff	127
3.10.3	Ground water	130
3.10.4	Sediment sources and sediment deliver.....	132
3.11	Standardised Precipitation Index	134
3.11.1	Introduction to EasyFit 5.5	139
3.11.2	Goodness of Fit Tests	142
3.12	Drought indices of standardised streamflow index	143

3.12.1	Model calibration	145
3.13	Time Series Homogenisation	146
3.14	Statistical tests for trend analysis.....	150
3.14.1	Mann-Kendall test	150
3.14.2	Sen's estimator of slope.....	153
3.14.3	Pre-Whitening and its effect.....	154
3.15	Drought Risk Assessment.....	157
3.15.1	Drought Vulnerability Assessment.....	157
3.15.2	Drought Hazard Assessment	164
3.15.3	Drought Risk Map	165
3.16	Water Resources Approach Process	166
3.17	Summary	168

CHAPTER 4 –RESULT AND DISCUSSION

4.1	Analyse the drought trend and its impact the ZDC	169
4.1.1	Spatial patterns of precipitation indices	169
4.1.2	Homogeneity test.....	172
4.1.3	Trend Analysis and Serial correlation effect on Drought.....	186
4.1.4	Trends in the Rainfall	192
4.1.5	Seasonal and Annual rainfall Pattern trends.....	200
4.2	SPI Characteristics.....	202
4.2.1	Generalized Extreme Value (GEV) Distribution over ZDC	203
4.2.2	Temporal variation of drought	206
4.2.3	SPI spatial interpolation	213
4.3	Streamflow Analysis	218
4.3.1	Dam Inflow Characteristics	225
4.4	Analysis of SPI and SSFI relations.....	229

4.5	Drought Impacts	236
4.5.1	SPI Relationship with Groundwater.....	236
4.5.2	The SPI and the Groundwater Table	236
4.5.3	Soil Erosion Risk Assessment in ZDC.....	239
4.6	Drought Risk Map defining steps.....	242
4.6.1	Drought Hazard Maps	242
4.6.2	Drought Vulnerability Map	246
4.6.3	Drought Risk Map	248

CHAPTER 5 –CONCLUSIONS AND RECOMENDATIONS

5.1	Summary.....	250
5.2	Conclusions of the study	252
5.2.1	To analyse the drought trend and impact of ZDC	253
5.2.2	To develop drought hazard and drought vulnerability maps....	254
5.2.3	To develop Susceptibility and Risk Map of ZDC	256
5.3	Recommendations for future works	257
	REFERENCES.....	258

**PEMBANGUNAN MAP KEMARAU RISIKO ZAYANDEH RUD DAM
TADAHAN AIR MENGGUNAKAN SUMBER PENDEKATAN PROSES**

ABSTRAK

Tujuan utama kajian ini adalah untuk menambahbaik metodologi untuk menilai tren kemarau dan memahami kaedah yang sesuai, bergantung kepada keadaan sebenar kawasan tadahan untuk mengurangkan impak kemarau. Sebanyak 15 stesen meterologi dan 9 tolok aliran air di sekitar Tadahan Empangan Zayandehrud (ZDC), di tengah Iran telah pilih untuk dianalisa. Rangka kerja yang dipilih untuk kajian ini ialah model Proses Pendekatan Sumber Air (WRAP), satu teknik hybrid, data geologi dan morfometri di gunakan untuk lebih memahami impak dan tren kekurangan air. Penilaian index kemarau meteorologi sedia ada, iaitu Indeks Hujan Piawai (SPI), Indeks Skor Z (ZSI) dan Desil telah gunakan untuk menilai kesesuaian penentuan keadaan kemarau. Penggunaan Indeks Hujan Piawai (SPI) didapati sesuai untuk menilai kemarau meteorologi di Iran. SPI juga sesuai untuk mengenalpasti titik permulaan dan tamat sejarah kemarau. Untuk menganalisa aliran, Indeks Aliran Piawai di gunakan. Beberapa plot serak dan rajah lengkung SPI dan SSFI menunjukkan keputusan yang berkait rapat. Penilaian hujan, ujian, Mann-Kendall (MK), cerun Sene dan ujian LOWESS digunakan untuk menganggar signifikan tren temporal kedua-dua hujan dan aliran. Satu proses parametrik separa dan parametrik berkaitan dengan kaedah anggaran bergerak berintegrasi autoregresi pecahan dan ujian penskalaan MK digunakan untuk menilai signifikan tren temporal. Keputusan kajian untuk majoriti aliran siri masa berbanding hujan dalam masa kemarau menunjukkan tren selari, menunjukkan majoriti air larian pada masa susulan yang pendek dan kurang aliran penyusupan ke hilir. Kebanyakan stesen hujan dan tolok aliran menunjukkan tren meningkat. Perubahan yang tinggi berlaku di sebelah barat
