2016

EFFECT OF SHEAR STRENGTH PARAMETERS IN RESIDUAL SOILS ON SLOPE FAILURES

by

DAMANHURI JAMALLUDIN

Thesis submitted in fulfillment of the requirements for the degree of Doctor of Philosophy

March 2016

ACKNOWLEDGEMENTS

The author wishes to express his sincere gratitude to the Research Management Institute, UiTM, Shah Alam, for providing funds to conduct this study. The author also wishes to express his utmost gratitude to his main supervisor, Prof. Dr. Fauziah Ahmad (USM) and field supervisor Prof. Dr. Roslan Zainal Abidin (IUKL) for their support, encouragement and excellent supervision towards the completion of this study.

I would express my sincere gratitude to Ir. Dr. Mohd Farid Ahmad, En Badrul Nizam Ismail, En Muhammad Hafeez Osman, Dr Mohammad Nizam Ibrahim, Dr. Ahmad Zia Ui-Saufie Mohamad Japeri and Assoc. Prof. Ahmad Shukri Yahaya (USM) who have assisted and provided valuable advice to the author. The author also wishes to record his thanks to Dr. Clotida Petrus (Head of Civil Engineering Faculty, UiTM Penang) for allowing the usage of the testing equipments of the faculty in order to carry out all the required testings. The author also wishes to express his deep appreciation to En. Mohd Naim Zainol, Cik Suhana Mohd Noor, Cik Siti Fatimah Zainal, Pn. Nurul Ain Abdullah and other research assistants (RA) for carrying out all the testings required for this research. My sincere thanks also go to the final year civil engineering degree students who have collected all the soil samples for the required tests and also conducted the survey works. They include Suriati Ahmad, Mohd Siddiq Abdul Rahim, Tengku Firdaua Tuan Lah, Lokman Amir Hamzah, Wan Nuursufila Salleh and Noor Nashairie Mohd Nasir. All of them have graduated in 2008.

The author wishes to express his appreciation to Cik Farah Hariyani Haris and En Abdul Malek Ishak (technicians in UiTM Penang Geotechnical Laboratory)

who have assisted the RA in conducting all the tests. The author would also like to thank the PWD Balik Pulau, Penang and PWD Baling, Kedah as well as PWD Gerik, Perak for giving the permission to the author to take soil samples and conducting JKR probe tests at all the study areas. Thanks are also due to all the faculty members and others who have directly or indirectly involved in helping the author to complete this study.

I am also grateful to Ir. Mohd Rozi Shaari and Ir. Azhari Abdullah from IKRAM Sdn. Bhd. who have provided soil investigation results within the study areas. Thanks are also due to many of the author's friends in PWD Malaysia who have assisted in one way or the other in helping to complete this study. Thanks are also due to PWD Malaysia where the author has worked for 15 years before joining UiTM. The valuable site and practical experiences gained on constructions in TLDM Lumut and geotechnical designs in IKRAM as well as in Geotechnical Section of Road Design Unit, PWD have helped the author to complete this study. These include the opportunity to design slopes and other geotechnical aspects. The books and journal papers collected while working in IKRAM and Road Design Unit, PWD later have become very useful references in this study. This work is dedicated to the author's wife, Noor Ashikin Noordin and all the 4 grown up children.

Abstract……. xlii

CHAPTER 1 - INTRODUCTION

1.1 Overview of the Study…… 1

1.2 Problem Statements……. 3

1.3 Objectives of the Study……... 6

1.4 Limitations of the Study……. 6

1.5 Thesis Outline…… 7

CHAPTER 2 - LITERATURE REVIEW

2.1 Introduction…...…….…… 9

2.2 Important Definitions…….…… 9

2.3 Shallow Slope Failures……...…… 11

2.3.1 Causes of Failures…….…….. 14

2.4 Erosion Study…….…… 16

2.5 Factor of Safety (FOS) ……..…….. 17

2.5.1 Values of FOS Used in Slope Design……. 20

2.5.2 Stability Analysis…….……... 21

2.5.3 Slope Stability Analysis Method Using Methods of Slices……... 22

2.5.4 Morgenstern - Price Slope Stability Method…….. 25

2.5.5 Equations of Some of Other Methods of Slices……. 26

2.5.6 Slope Stability Software……. 26
2.5.6 (a) SLOPE / W Software……..…… 27
2.5.6 (b) PLAXIS Software……... 27
2.6 Malaysian Geology…….…… 29
2.6.1 Geology of Penang……. 30
2.6.2 Geology of Baling…….…….. 31
2.7 Residual Soils…….……. 33
2.7.1 Geology and Residual Soil of Study Areas…… 33
2.8 Soil Classification Systems……. 34
2.8.1 The British Soil Classification System (BSCS) ……. 35
2.9 Highly Variable Strength of Residual Soils…… 36
2.10 Short and Long Terms Stability Conditions…… 39
2.11 Direct Shear Box Tests and Shear Strength Parameters…….. 41
2.11.1 Consolidated Drained Shear Box Tests…….. 41
2.11.2 Slow Shearing Rate for CD Shear Box Tests……. 43
2.11.3 Shear Strength of Residual Soils……. 44
2.11.4 Lower Limits of Shear Strength of Residual Soils……. 47
2.12 Distribution Fitting…….. 50
2.12.1 Common Types of Distributions for Shear Strength Parameters……... 50
2.12.2 Performance Indicators (PI) …….. 52
2.12.3 Methods to Determine the Best Fit Distribution……. 53
2.12.4 Coefficient of Variation, t-Square and Chi-Square Tests…… 55
2.12.5 Skewness…….…… 57
2.12.6 Kurtosis…….…….. 58
2.13 Uncertainty in Slope Failure Evaluations…… 59
2.14 Soil Investigation Conducted at Slope Failures in Malaysia……... 61
2.15 Summary of Literature Review……... 62
2.16 Gap of Knowledge…….……. 63

CHAPTER 3 - RESEARCH METHODOLOGY
3.1 Introduction…….…… 66

3.2 Research Methodology Flow Chart……..……... 67
3.3 Locations of Study Areas…….……... 68
3.4 Slope Locations and Sample Locations…….. 70
3.5 Study Areas in Penang…… 71
3.6 Soil Samplings at Slope Locations in Penang……. 72
3.7 Study Area in Baling……... 74
3.8 Soil Samplings at Slope Locations in Baling…….……. 75
3.9 Samples Collected for 1-D Consolidation Tests……. 77
3.10 Collection of Soil Samples…….……. 79
3.10.1 Samples Collected at Slope Failure Taken at Depth of 100mm……... 79
3.10.2 Samples Collected at Slope Failure Taken at Varying Depths…… 80
3.10.3 Samples Collected at Stable Slopes…….…….. 81
3.11 CIU Triaxial Tests in the Study Area…….……. 82
3.12 Secondary Data Collection…….. 83
3.13 Field Testing…….……... 87
3.14 Laboratory Testing…….……. 88
3.14.1 Slow Shearing Rate from 1-D Consolidation Tests……. 89
3.14.2 CD shear box tests…….…… 91
3.14.2 (a) Normal Stresses Applied to CD Shear Box Tests…….. 91
3.15 Data Distribution Analysis…….……. 92
3.15.1 Common Distribution Types…….…… 93
3.15.2 Normal Distribution…….……. 94
3.15.2 (a) Properties of Normal Distribution…… 94
3.15.3 Weibull Distribution…….……. 97
3.15.4 Gamma Distribution…….……. 97
3.15.5 Beta Distribution…….…….. 98
3.16 Performance Indicators (PI) …….…….. 98
3.16.1 Normalised Absolute Errors (NAE) ……. 99
3.16.2 Root Mean Square Error (RMSE)…….……... 99
3.16.3 Index of Agreement (IA) …….……. 99

3.16.4 Prediction Accuracy (PA) ……..……... 100
3.16.5 Coefficient of Determination (R^2) ……... 100
3.17 Procedures to Analyse Data…….……... 101
3.17.1 Procedures to Randomise the Shear Strength Data…….. 101
3.17.2 Determination of the Best Fit Distribution…… 102
3.17.3 Goodness-of-Fit Test Using Kolmogorov - Smirnov Tests Method……. 103
3.17.4 Validating the Model Training Data…….…… 103
3.17.5 Determination of the Lower Bound Values…….. 104
3.17.6 Verification of the Lower Bound Values…….. 105
3.17.7 Summary of the Data Analysis Procedures……... 105
3.18 Box Plots…….…… 106
3.19 Summary of Research Methodology……... 107

CHAPTER 4 - RESULTS AND DISCUSSIONS

4.1 Introduction…….…… 108
4.2 Summary of Data in This Study…….……. 109
4.3 The Summary of PWD Data Obtained from PWD Projects……... 111
4.4 Results of Laboratory and Field Tests……. 112
4.4.1 1-D Consolidation Test Results……. 112
4.4.1 (a) Loose and Dense Bulk Unit Weights of Soil Samples…….. 112
4.4.1 (b) The Average Displacement at Peak Shear Strength…….. 115
4.4.1 (c) Results of 1-D Consolidation Tests……... 116
4.4.2 Natural and Submerged Moisture Content Tests…….. 118
4.4.3 Particle Density Tests…… 122
4.4.4 Atterberg Limit Tests…… 123
4.4.5 Particle Size Distributions and Soil Types…… 127
4.4.5 (a) Particle size distributions……... 128
4.4.5 (b) Soil Types…….……. 131
4.4.6 Bulk Unit Weight…….……. 134
4.4.7 JKR Probe Tests…….……... 136

4.4.8 Effects of Soil Properties on Stable Slope…… 137
4.4.9 Slope Geometry……. 138
4.4.10 Effective Shear Strength in this Study……..…. 140
4.4.10 (a) Consolidation Tests Prior to Shearing in CD Shear Box Tests……. 140
4.4.10 (b) Results of CD Shear Box Tests……. 141
4.4.10 (c) Cohesion in Baling is Lower Than in Penang…… 144
4.4.10 (d) The t-Square Test Done on Shear Strength Data…… 148
4.4.10 (e) The Extremely High Friction Angle Values.. 151
4.4.10 (f) Higher Maximum Cohesion in Granitic than Sedimentary RS……..…… 153
4.5 Variation of Shear Strength With Depth……..…… 154
4.6 Repeatable CD Shear Box Tests…….……. 157
4.7 CD Shear Box and CIU Triaxial Tests in This Study……. 162
4.8 Shear Strength from This Study and PWD Data……..… 163
4.9 Model Development…… 165
4.9.1 Introduction and Objective…… 165
4.10 Shear Strength Data…… 166
4.11 Separation of the Cohesion and Friction Angle Data……. 168
4.12 Best Fit Distribution…… 169
4.13 Creation of the Predicted Validation Data……..……. 175
4.14 Comparison Between Observed Validation and Predicted Validation Data……... 176
4.15 Box Plots……..…… 178
4.16 Goodness-of-Fit Test Using Kolmogorov - Smirnov Tests Method…… 181
4.17 Threshold Values of Shear Strength Parameters……. 182
4.18 Basic Concept to Obtain Lower Bound, Mean and Upper Bound 184
4.19 Distribution of Square Root Cohesion (√c') from Training Data……. 186
4.20 Distribution of Sine Friction Angle (sin ø') from Training Data… 187

4.21 Distribution of Square Root Cohesion ($\sqrt{c'}$) from PWD Data….. 188

4.22 Distribution of Tangent Friction Angle (tan ø') from PWD Data... 189
4.23 Confirmation of the Modelling Using SLOPE / W Analysis…….. 191
4.24 Variations of Shear Strength Parametrs of the Same Soil Sample.. 196
4.25 Lower Bound are Values from This Study…….…… 201
4.26 Combining the Shear Strength of Granitic and Sedimentary Residual Soils…….. 204
4.27 Percentage of Majority of the Data……. 205
4.28 To Confirm the Lower Bound Values By Obtaining FOS < 1…… 207
4.29 Summary…….. 209

CHAPTER 5 - CONCLUSIONS AND RECOMMENDATIONS

5.1 Summary of This Study…….. 211
5.2 Conclusions……. 212
5.3 Main Contribution……... 215
5.4 Recommendations for Future Studies……. 217

References…….…… 219
