

Microcalorimetric and Microbiological *in vitro* Investigations on the Acaricidal, Insecticidal, and Antimicrobial Effects of Propolis

Mikrokalorimetrische und mikrobiologische *in vitro* Untersuchungen auf akarizide, insektizide und antibiotische Wirkungen von Propolis

Inaugural-Dissertation
zur Erlangung des Doktorgrades
am Fachbereich Biologie, Chemie und Pharmazie
der Freien Universität Berlin

vorgelegt von

Assegid Garedew

Berlin 2003

Gedruckt mit Unterstützung des Deutschen Akademischen Austauschdienstes (*DAA**D*)

Die vorliegende Arbeit wurde in der Zeit von April 2000 bis August 2003 an der Freien Universität Berlin, Fachbereich Biologie, Chemie, und Pharmazie, am Institut für Biologie/Zoologie unter der Anleitung von Prof. Dr. Ingolf Lamprecht, Dr. Erik Schmolz und Prof. Dr. Burkhard Schricker angefertigt.

1. Gutachter: Prof. Dr. I. Lamprecht
2. Gutachter: Prof. Dr. K. Hausmann / Prof. Dr. B. Schricker

Datum der Disputation 13.11.2003

To my son Lucas

It must be realized that empiricism has its limits, and we must face the fact that a deeper understanding of biology may require a more heuristic approach. The making of new theories is, however, a risky business and much stumbling can be anticipated along the way to successful, general, and fruitful results.

H.J. Morowitz (1968)

Table of Contents

1.0 General Introduction	1
1.1 <i>Varroa</i> mites as parasites of honeybees	1
1.1.1 Biology of <i>Varroa destructor</i> mites	3
1.1.2 Defence mechanisms of <i>Apis mellifera</i>	5
1.1.3 Behavioural defence of <i>Apis mellifera</i> against <i>Varroa destructor</i>	6
1.1.4 Control methods of <i>Varroa destructor</i>	6
1.1.4.1 Biological methods	7
1.1.4.2 Biotechnical methods	7
1.1.4.3 Chemical methods	7
1.2 <i>Galleria mellonella</i> as pest of the honeybee	8
1.3 Propolis	10
1.3.1 Botanical origin	11
1.3.2 Collection	12
1.3.3 Uses in the beehive	13
1.3.4 Chemical composition	14
1.4 Calorimetry in biological investigations	15
1.4.1 Types of calorimeters	15
1.4.2 Isoperibolic heat conduction microcalorimeters	17
1.4.3 Calibration of calorimeters	18
1.4.4 Advantages and disadvantages of calorimetry in biological investigations	19
1.5 Objectives and structure of the thesis	19
2.0 Metabolic Physiology and the Energy and Nutritional Demands of the Parasitic Life of the Mite <i>Varroa destructor</i>	24
2.1 Abstract	24
2.2 Introduction	24
2.3 Materials and methods	26
2.3.1 Evaluation of brood infestation level	26
2.3.2 Calorimetric determination of the metabolic rate of capped worker brood	26
2.3.3 Determination of weight change of brood during ontogenesis	27
2.3.4 Survival of starvation and resource utilization by <i>Varroa destructor</i>	27
2.3.5 Calorimetric experiments with <i>Varroa destructor</i>	28

2.3.6 Respirometric experiments with <i>Varroa destructor</i>	29
2.3.7 Statistical analysis	29
2.4 Results	30
2.4.1 Infestation level of brood	30
2.4.2 Metabolic rates and utilization of reserve food under starvation	31
2.4.3 Computation of the brood hemolymph robbed by a foundress mite and its offsprings	33
2.5. Discussion	37
3.0 The Antivarroa Action of Propolis: a Laboratory Assay	42
3.1 Abstract	42
3.2 Introduction	42
3.3 Materials and methods	43
3.3.1 Propolis extraction and preparation	43
3.3.2 Mite collection	44
3.3.3 Bioassay	44
3.3.4 Calorimetric experiments	45
3.4 Results	45
3.5 Discussion	50
4.0 Microcalorimetric and Respirometric Investigations of the Effect of Temperature on the Antivarroa Action of Propolis	54
4.1 Abstract	54
4.2 Introduction	54
4.3 Materials and methods	55
4.3.1 Animal material	55
4.3.2 Calorimetric experiments	56
4.3.3 Treatment of mites with propolis	57
4.3.4 Respirometric experiments	57
4.3.5 Statistical analysis	58
4.4 Results	58
4.5 Discussion	62
5.0 Comparative Investigations of the Antivarroa Actions of Propolis of Different Geographic Origins	66
5.1 Abstract	66
5.2 Introduction	66

5.3 Materials and methods	67
5.3.1 Propolis sources	67
5.3.2 Preparation of propolis extracts	68
5.3.3 Biological material	69
5.3.4 Petridish bioassay	69
5.3.5 Calorimetric assay	70
5.3.6 Scanning electron microscopy of propolis-treated Varroa mites	71
5.3.7 Statistical analysis	71
5.4 Results	71
5.5 Discussion	83
6.0 The Effect of Propolis on the Metabolic Rate and Metamorphosis of the Greater Wax Moth <i>Galleria mellonella</i>	86
6.1 Abstract	86
6.2 Introduction	86
6.3 Materials and methods	88
6.3.1 Animal and culture conditions	88
6.3.2 Calorimetric experiments	89
6.3.2.1 Short period experiments	89
6.3.2.2 Long period experiments	90
6.3.3 Propolis preparation and larval treatment	90
6.4 Results	91
6.4.1 Metabolism and growth of untreated larvae	91
6.4.2 Short period experiments	92
6.4.3. Long period experiments	93
6.5 Discussion	97
7.0 Microbiological and Calorimetric Investigations on the Antimicrobial Actions of Different Propolis Extracts: An <i>in vitro</i> Approach	100
7.1 Abstract	100
7.2 Introduction	101
7.3 Materials and methods	103
7.3.1 Propolis acquisition and preparation of ethanol extracted propolis (EEP)	103
7.3.2 Extraction of propolis volatiles (PV)	104
7.3.3 Water extracted propolis (WEP)	104
7.3.4 Biological material	105

7.3.5 Growth media	105
7.3.6. Petridish bioassay	106
7.3.6.1 Agar well diffusion pour plate technique	106
7.3.6.1.1 Bacteria and yeast	106
7.3.6.1.2 Filamentous fungi	106
7.3.6.2 Agar dilution in plates	107
7.3.7 Calorimetric bioassay	108
7.3.7.1 Calibration of the flow calorimeter	108
7.3.7.2 Sterilization of the calorimetric set-up	108
7.3.7.3 Microcalorimetric cultivation of bacteria	109
7.3.7.4 Determination of O ₂ concentration and CFU	110
7.3.7.5 Treatment of bacteria with propolis	110
7.3.7.6 Determination of calorimetric MIC and MBC values	111
7.3.8 Statistical analysis	111
7.4 Results	112
7.4.1 Differences in the yield of extraction and physical properties of propolis samples	112
7.4.2 Antimicrobial activities of ethanol extracts of different propolis samples	113
7.4.3 Comparison of antimicrobial activities of different extracts	113
7.4.4 Differences in the sensitivity of various microorganisms to propolis	116
7.4.5 Calorimetric experiments	117
7.4.5.1 Calorimetric cultivation of bacteria	117
7.4.5.2 Effect of propolis treatment on bacterial culture properties	119
7.4.5.3 Calorimetric dose-response curves	122
7.4.5.3.1 Calorimetric MIC and MBC values	122
7.4.5.3.2 Level of the <i>p-t</i> curve after treatment with different concentrations of propolis	124
7.4.5.3.3 Slope of the curve ascend after treatment	126
7.4.5.3.4 Level of the of the <i>p-t</i> peak achieved after treatment	127
7.4.5.4 Comparison of the antimicrobial activities of different propolis extracts	128
7.5 Discussion	129
7.5.1 Physico/electro-chemical properties of propolis and yield of extraction	129
7.5.2 Petridish bioassay of different propolis samples	131

7.5.3. Comparison of the sensitivity of different microbes to propolis	132
7.5.4 Comparison of the antimicrobial activities of different propolis extracts	134
7.5.5 Calorimetric experiments	135
7.5.6 Possible mechanisms of propolis action	139
8.0 General discussion / Allgemeine Diskussion	141
8.1 General discussion	141
8.2 Allgemeine Diskussion	147
9. Outlook	153
10. References	155
11. Appendix	170
12.1 Appendix to Chapter 7	170
12.2 Acknowledgements	175
12.3 Personal data	177
12.4 List of own publications	178
12.5 Declaration	180
