а) Керамика - Апстракти b) Наука о материјалима - Апстракти c) Наноматеријали - Апстракти COBISS.SR-ID 244577036 Dear Colleagues,

We have great pleasure to welcome you to the Advanced Ceramic and Application Conference VI organized by the Serbian Ceramic Society in cooperation with the Institute for Testing of Materials, Institute of Technical Sciences of SASA, Institute of Chemistry Technology and Metallurgy and Institute for Technology of Nuclear and Other Raw Mineral Materials.

Advanced Ceramics today include many old-known ceramic materials produced through newly available processing techniques as well as broad range of the innovative compounds and composites, particularly with plastics and metals. Such developed new materials with improved performances already bring a new quality in the everyday life. The chosen Conference topics cover contributions from a fundamental theoretical research in advanced ceramics, computer-aided design and modeling of a new ceramics products, manufacturing of nanoceramic devices, developing of multifunctional ceramic processing routes, etc. Traditionally, ACA Conferences gather leading researchers, engineers, specialist, professors and PhD students trying to emphasizes the key achievements which will enable the wide speared use of the advanced ceramics products in High-Tech industry, renewable energy utilization, environmental efficiency, security, space technology, cultural heritage, prosthesis, etc.

Serbian Ceramic Society has been initiated in 1995/1996 and fully registered in 1997 as Yugoslav Ceramic Society, being strongly supported by American Ceramic Society. Since 2009, it has continued as Serbian Ceramic Society in accordance to the Serbian law procedure. Serbian Ceramic Society is almost the only one Ceramic Society in the South-East Europe, with members from more than 20 Institutes and Universities, active in 16 sessions, by program and the frames which are defined by the American Ceramic Society activities.

For the first time Advanced Ceramic and Application Conference hosting delegations from Republics of Ghana, Nigeria, Niger and Cameroon with the idea to connect, share and provide positive influence to the scientific and industrial communities all around world.

Prof. Dr Vojislav Mitić

President of the Serbian Ceramic Society World Academy Ceramics Member

President of the General Assembly of the Serbian Ceramic Society European Academy of Sciences&Arts Member

Academy of Engineering Sciences of Serbia Member

#### **Conference Topics**

- Basic Science & Sintering of Ceramics
- Nano, Bio- & Opto Ceramic
- Electro & Multifunctional Ceramics
- Magnetic, Catalytic & Composite Materials

Prof. Dr Olivera Milošević,

- Renewable Energy, Heritage & Archeology
- **Industrial Talks**

#### **Conference Co-chairmens:**

Prof. Dr. Vojislav Mitić SRB

Prof. Dr. Olivera Milošević SRB

Prof. Dr. Marcel Van de Voorde EU

Prof. Dr. Rainer Gadow GER

**Conference Programme Chairs:** 

Dr. Lidija Mančić SRB

Dr. Nina Obradović SRB

#### **Scientific Committee**

## Synthesis of hierarchically structured Y<sub>2</sub>O<sub>3</sub>:Eu<sup>3\*</sup> @ Ag nanocomposites with plasmon enhanced luminesencence *via* ultrasonic spray pyrolysis

G. Alkan<sup>1</sup>, B. Friedrich<sup>1</sup>, L. Mančić<sup>2</sup>, O. Milošević<sup>2</sup>

<sup>1</sup>IME Process Metallurgy and Metal Recycling, Intzestraße 3, 52072 Aachen, Germany.
<sup>2</sup>Institute of Technical Sciences of the Serbian Academy of Sciences and Arts, Knez Mihailova 35/IV, 11000 Belgrade, Serbia.

Y<sub>2</sub>O<sub>3</sub>:Eu<sup>3+</sup>@Ag nanocomposites have been successfully synthesized by ultrasonic spray pyrolysis (USP) and examined to reveal effects of surface plasmon resonance, associated to silver nanoparticles, to the luminescence efficiency of Y<sub>2</sub>O<sub>3</sub>: Eu<sup>3+</sup> red-emitting phosphors. Various Ag concentrations (1, 2.5 and 5 wt. %) and heat-treatment regimes (as prepared, 2h, 12h) were applied to understand how size and distribution of the Ag nanoparticles affect the luminescence efficiency. Samples were characterized by TEM, XRPD and STEM to evaluate crystal structure and distribution of Eu<sup>3+</sup> in Y<sub>2</sub>O<sub>3</sub> matrix. In terms of Y. O and Eu ions, uniform distribution was observed in the particles interior, while the Ag is present at the particles surface showing that USP is feasible for synthesis of hierarchically organized Y<sub>2</sub>O<sub>3</sub>:Eu<sup>3+</sup>@Ag. In the case of higher Ag concentration, a deviation from uniform and finely distributed Ag nanoparticles on Y2O3:Eu3+ surface was detected having detrimental effect to the plasmon enhanced luminescence. Regardless from silver concentrations, all heat treated samples exhibited superior luminescence with respect to asprepared ones, while decrease of luminescence efficiency was detected with the increase of Ag concentration. The most intense red luminescence at 612 nm which is due Eu<sup>3+ 5</sup>D<sub>0</sub> $\rightarrow$ <sup>7</sup>F<sub>2</sub> transition was observed in Y<sub>2</sub>O<sub>3</sub>:Eu<sup>3+</sup>@Ag system for sample with 1wt% Ag, annealed for 12 hours.

### Microwave assisted synthesis of onion-like carbon

<u>Jelena Jovanović<sup>1</sup></u>, Filip Marinković<sup>2</sup>, Mihajlo Gigov<sup>3</sup>, Borivoj Adnađević<sup>1</sup>

<sup>1</sup>University of Belgrade, Faculty of Physical Chemistry, Studentski trg 12-16, 11158 Belgrade 118, PAC 105305, Serbia

Onion-like carbon (OLC) is specific allotropic form of carbon which is expected to achieve wide application in many fields such as solid lubricant materials, electron sources, electromagnetic shields, catalysts in fuel cells, lithium ion batteries, etc. Until now, OLC were prepared using chemical vapour deposition (CVD), arc discharge, laser ablation, etc. A novel procedure for OLC synthesis is developed which is based on solid-phase interaction of the carbohydrate precursor and susceptor of microwave energy. The effects of the type and quantity of precursor and susceptor in reaction mixture, reaction mixture weight, power of microwave field and interaction time on the yield of OLC are investigated. Characterization of the resultant product was done by ordinary used techniques such as X-ray diffractometry,
